# Reducibility proofs in the $\lambda$-calculus 

Fairouz Kamareddine, Vincent Rahli and J. B. Wells*

#### Abstract

Reducibility, despite being quite mysterious and inflexible, has been used to prove a number of properties of the $\lambda$-calculus and is well known to offer general proofs which can be applied to a number of instantiations. In this paper, we look at two related but different results in $\lambda$-calculi with intersection types. 1. We show that one such result (which aims at giving reducibility proofs of Church-Rosser, standardisation and weak normalisation for the untyped $\lambda$-calculus) faces serious problems which break the reducibility method. We provide a proposal to partially repair the method. 2. We consider a second result whose purpose is to use reducibility for typed terms in order to show the Church-Rosser of $\beta$-developments for the untyped terms (and hence the ChurchRosser of $\beta$-reduction). In this second result, strong normalisation is not needed. We extend the second result to encompass both $\beta I$ - and $\beta \eta$-reduction rather than simply $\beta$-reduction.

Keywords: Lambda-Calculus, Reducibility, Church-Rosser, Developments

## 1. Introduction

Based on realisability semantics [Kle45], the reducibility method has been developed by Tait [Tai67] in order to prove the normalisation of some functional theories. The basic idea of reducibility is to interpret types by sets of $\lambda$-terms which are closed under some properties. Girard [Gir72] developed the reducibility method further and used it to prove the strong normalisation of a typed $\lambda$-calculus by introducing the candidates of reducibility [Ga190]. Statman [Sta85], Koletsos [Kol85], and Mitchell [Mit90, Mit96] also used reducibility to prove the Church-Rosser property (also called confluence) of the simply typed $\lambda$ calculus. Furthermore, Krivine [Kri90] uses reducibility to prove the strong normalisation of system $\mathcal{D}$, an intersection type system [CDC80, CDCV80, CDCV81]. Moreover, Gallier [Ga197, Ga198] uses some aspects of Koletsos's method to prove a number of results such as the strong normalisation of the $\lambda$-terms

[^0]that are typable in systems like $\mathcal{D}$ or $\mathcal{D} \Omega$ [Kri90]. In particular, Gallier states some conditions a property needs to satisfy in order to be enjoyed by some typable terms under some restrictions.

Similarly, Ghilezan and Likavec [GL02] state some conditions a property has to satisfy in order to hold for all $\lambda$-terms typable under some type restrictions in a type system close to $\mathcal{D} \Omega$. Furthermore, they state a condition that a property has to satisfy in order to step from the statement "a $\lambda$-term typable under some restrictions on types has the property" to the statement "a $\lambda$-term of the untyped $\lambda$-calculus has the property". If successful, the method of [GL02] would provide an attractive way for establishing properties such as Church-Rosser for all the untyped $\lambda$-terms, by simply showing easier conditions on typed terms. However, we show in this paper that Ghilezan and Likavec's method fails in both the typed and the untyped settings. We outline the obstacle we faced when trying to repair the result for the typed setting and explain how far we have been able to to repair it. However, the result for the untyped setting seems unrepairable. Ghilezan and Likavec also present a weaker version of their method for a type system similar to system $\mathcal{D}$, which allows one to use reducibility to prove properties of the terms typable by this system, namely the strongly normalisable terms. As far as we know, this portion of their result is correct. (They do not actually apply this weaker method to any sets of terms.)

In addition to the method proposed by Ghilezan and Likavec (which does not actually work for the full untyped $\lambda$-calculus), other steps of establishing properties like Church-Rosser for typed $\lambda$-terms and concluding the properties for all the untyped $\lambda$-terms have been successfully exploited in the literature. Koletsos and Stavrinos [KS08] use reducibility to state that the $\lambda$-terms that are typable in system $\mathcal{D}$ satisfies the Church-Rosser property. Using this result together with a method based on $\beta$ developments [Klo80, Kri90], they show that $\beta$-developments are Church-Rosser and this in turn will imply the confluence of the untyped $\lambda$-calculus. Although Klop [Klo80] proves the confluence of $\beta$ developments [BBKV76], his proof is based on strong normalisation whereas the Koletsos and Stavrinos's proof only uses an embedding of $\beta$-developments in the reduction of typable $\lambda$-terms. In this paper, we apply Koletsos and Stavrinos's method to $\beta I$-reduction and then generalise it to $\beta \eta$-reduction.

In section 2 we introduce the formal machinery and establish some needed lemmas. In section 3 we present the reducibility method used by Ghilezan and Likavec and show that it fails at a number of important propositions which makes it inapplicable to the full untyped $\lambda$-calculus, although a version of their method works for the strongly normalisable terms. We give counterexamples where all the conditions stated in Ghilezan and Likavec's paper are satisfied, yet the claimed property does not hold. In section 4 we indicate the limits of the method, show how these limits affect its salvation and then we partially salvage it so that it can be correctly used to establish confluence, standardisation and weak head normal forms but only for restricted sets of lambda terms and types (that we believe to be equal to the set of strongly normalisable terms). We point out some links between the work of [GL02] and that of Gallier [Ga198]. In section 5, we give a precise formalisation of $\beta$-developments where we formally deal with occurrences of redexes using paths and we adapt definitions from [Kri90] to allow $\beta I$ - and $\beta \eta$-reduction. In section 6 , we introduce the reducibility semantics for both $\beta I$ - and $\beta \eta$-reduction and establish its soundness. Then, we show that all typable terms satisfy the Church-Rosser property. In section 7 we adapt the Church-Rosser proof of Koletsos and Stavrinos [KS08] to $\beta I$-reduction. In section 8 we non-trivially generalise Koletsos and Stavrinos's method to handle $\beta \eta$-reduction. We formalise $\beta \eta$-residuals and $\beta \eta$-developments in section 8.1. Then, we compare our notion of $\beta \eta$-residuals with those of Curry and Feys [CF58] and Klop [Klo80] in section 8.2, establishing that we allow less residuals than Klop but we believe more residuals than Curry and Feys. Finally, we establish in section 8.3 the confluence of $\beta \eta$-developments and hence of $\beta \eta$-reduction. We conclude in section 9 .

## 2. The Formal Machinery

This section provides some known formal machinery and introduces new definitions and lemmas that are necessary for the paper. Let $n, m$ be metavariables which range over the set of natural numbers $\mathbb{N}=$ $\{0,1,2, \ldots\}$. We take as convention that if a metavariable $v$ ranges over a set $s$ then the metavariables $v_{i}$ such that $i \geq 0$ and the metavariables $v^{\prime}, v^{\prime \prime}$, etc. also range over $s$.

A binary relation is a set of pairs. Let rel range over binary relations. Let dom $($ rel $)=\{x \mid\langle x, y\rangle \in$ rel $\}$ and $\operatorname{ran}(r e l)=\{y \mid\langle x, y\rangle \in \operatorname{rel}\}$. A function is a binary relation fun such that if $\{\langle x, y\rangle,\langle x, z\rangle\} \subseteq$ fun then $y=z$. Let fun range over functions. Let $s \rightarrow s^{\prime}=\left\{\right.$ fun $\mid \operatorname{dom}($ fun $\left.) \subseteq s \wedge \operatorname{ran}(f u n) \subseteq s^{\prime}\right\}$.

Given $n$ sets $s_{1}, \ldots, s_{n}$, where $n \geq 2, s_{1} \times \cdots \times s_{n}$ stands for the set of all the tuples built on the sets $s_{1}, \ldots, s_{n}$. If $x \in s_{1} \times \cdots \times s_{n}$, then $x=\left\langle x_{1}, \ldots, x_{n}\right\rangle$ such that $x_{i} \in s_{i}$ for all $i \in\{1, \ldots, n\}$.

### 2.1. Familiar background on $\lambda$-calculus

This section consists of one long definition of some familiar (mostly standard) concepts of the $\lambda$-calculus and one lemma which deals with the shape of reductions.

Definition 2.1. 1. let $x, y, z$, etc. range over $\mathcal{V}$, a countable infinite set of $\lambda$-term variables. The set of terms of the $\lambda$-calculus is defined by:

$$
M \in \Lambda::=x|(\lambda x \cdot M)|\left(M_{1} M_{2}\right)
$$

We let $M, N, P, Q$, etc. range over $\Lambda$. We assume the usual definition of subterms: we write $N \subseteq$ $M$ if $N$ is a subterm of $M$. We also assume the usual convention for parenthesis and omit these when no confusion arises. In particular, we write $M N_{1} \ldots N_{n}$ instead of $\left(\ldots\left(M N_{1}\right) N_{2} \ldots N_{n-1}\right) N_{n}$. We take terms modulo $\alpha$-conversion and use the Barendregt convention (BC) where the names of the bound variables differ from the names of the free ones. When two terms $M$ and $N$ are equal (modulo $\alpha$ ), we write $M=N$. We write $\mathrm{fv}(M)$ for the set of the free variables of term $M$.
2. For $n \geq 0$, define $M^{n}(N)$, by induction on $n$ by: $M^{0}(N)=N$ and $M^{n+1}(N)=M\left(M^{n}(N)\right)$.
3. A path in a term $M$ is a pointer to a subterm of $M$. The set of paths is defined as follows:

$$
p \in \text { Path }::=0|1 . p| 2 . p
$$

We define $\left.M\right|_{p}$ by: $\left.M\right|_{0}=M,\left.(\lambda x . M)\right|_{1 . p}=\left.M\right|_{p},\left.(M N)\right|_{1 . p}=\left.M\right|_{p}$, and $\left.(M N)\right|_{2 . p}=\left.N\right|_{p}$. We define $2^{n} . p$ by induction on $n \geq 0: 2^{0} . p=p$ and $2^{n+1} . p=2^{n} \cdot 2 \cdot p$.
4. The set $\Lambda \mathrm{I} \subset \Lambda$, of terms of the $\lambda \mathrm{I}$-calculus is defined by:

- If $x \in \mathcal{V}$ then $x \in \Lambda \mathrm{I}$.
- If $M \in \Lambda \mathrm{I}$ and $x \in \mathrm{fv}(M)$ then $\lambda x . M \in \Lambda \mathrm{I}$.
- If $M, N \in \Lambda \mathrm{I}$ then $M N \in \Lambda \mathrm{I}$.

5. The substitution $M[x:=N]$ of $N$ for all free occurrences of $x$ in $M$ and the simultaneous substitution $M\left[x_{i}:=N_{i}, \ldots, x_{n}:=N_{n}\right]$ for $1 \leq i \leq n$, of $N_{i}$ for all free occurrences of $x_{i}$ in $M$ are defined as usual.
6. We define the following four common relations:

- Beta $::=\langle(\lambda x \cdot M) N, M[x:=N]\rangle$.
- Betal $::=\langle(\lambda x . M) N, M[x:=N]\rangle$, where $x \in \operatorname{fv}(M)$.
- Eta $::=\langle\lambda x . M x, M\rangle$, where $x \notin \mathrm{fv}(M)$.
- BetaEta $=$ Beta $\cup$ Eta.

Let $\langle s, r\rangle \in\{\langle$ Beta, $\beta\rangle,\langle$ Betal, $\beta I\rangle,\langle$ Eta, $\eta\rangle,\langle$ BetaEta, $\beta \eta\rangle\}$.
We define $\mathcal{R}^{r}$ to be $\{L \mid\langle L, R\rangle \in s\}$. If $\langle L, R\rangle \in s$ then we call $L$ a $r$-redex and $R$ a $r$-contractum of $L$ (or a $L r$-contractum). We define the ternary relation $\rightarrow_{r}$ as follows:

- $M \xrightarrow{0}{ }_{r} M^{\prime}$ if $\left\langle M, M^{\prime}\right\rangle \in s$
- $\lambda x . M \xrightarrow{1 . p}{ }_{r} \lambda x . M^{\prime}$ if $M \xrightarrow{p}{ }_{r} M^{\prime}$
- $M N \xrightarrow{1 . p} r M^{\prime} N$ if $M \xrightarrow{p}{ }_{r} M^{\prime}$
- $N M \xrightarrow{2 . p} r{ }_{r} N M^{\prime}$ if $M \xrightarrow{p}{ }_{r} M^{\prime}$

We define the binary relation $\rightarrow_{r}$ (for simplicity we use the same name as for the ternary relation) as follows: $M \rightarrow_{r} M^{\prime}$ if there exists $p$ such that $M \xrightarrow{p}{ }_{r} M^{\prime}$. We define $\mathcal{R}_{M}^{r}=\left\{p|M|_{p} \in \mathcal{R}^{r}\right\}$.
7. Let $M \in \Lambda$ and $\mathcal{F} \subseteq \Lambda$. $\mathcal{F} \upharpoonright M=\{N \mid N \in \mathcal{F} \wedge N \subseteq M\}$.
8. Let $\rightarrow_{h \beta}$ be the set of pairs of the form $\left\langle\lambda x_{1} \ldots x_{n} .\left(\lambda x . M_{0}\right) M_{1} \ldots M_{m}, \lambda x_{1} \ldots x_{n} . M_{0}[x:=\right.$ $\left.\left.M_{1}\right] M_{2} \ldots M_{m}\right\rangle$ where $n \geq 0$ and $m \geq 1$.
If $\langle L, R\rangle \in \rightarrow h \beta$ then $L=\lambda x_{1} \ldots x_{n}$. $\left(\lambda x \cdot M_{0}\right) M_{1} \ldots M_{m}$ where $n \geq 0$ and $m \geq 1$ and $\left(\lambda x . M_{0}\right) M_{1}$ is called the $\beta$-head redex of $L$. We define the binary relation $\rightarrow_{i \beta}$ as $\rightarrow_{\beta} \backslash \rightarrow_{h \beta}$.
9. Let $r \in\left\{\rightarrow_{\beta}, \rightarrow_{\eta}, \rightarrow_{\beta \eta}, \rightarrow_{\beta I}, \rightarrow_{h \beta}, \rightarrow_{i \beta}\right\}$. We use $\rightarrow_{r}^{*}$ to denote the reflexive transitive closure of $\rightarrow_{r}$. We let $\simeq_{r}$ denote the equivalence relation induced by $\rightarrow_{r}$. If the $r$-reduction from $M$ to $N$ is in $k$ steps, we write $M \rightarrow{ }_{r}^{k} N$.
10. Let $r \in\{\beta I, \beta \eta\}$ and $n \geq 0$. A term $\left(\lambda x . M^{\prime}\right) N_{0}^{\prime} N_{1}^{\prime} \ldots N_{n}^{\prime}$ is a direct $r$-reduct of a term $(\lambda x . M) N_{0} N_{1} \ldots N_{n}$ iff $M \rightarrow{ }_{r}^{*} M^{\prime}$ and $\forall i \in\{0, \ldots, n\} . N_{i} \rightarrow_{r}^{*} N_{i}^{\prime}$.
11. The set NF (of $\beta$-normal forms) and WN (of weakly $\beta$-normalisable terms) are defined by:

- $\mathrm{NF}=\left\{\lambda x_{1} \ldots \lambda x_{n} \cdot x_{0} N_{1} \ldots N_{m} \mid n, m \geq 0, N_{1}, \ldots, N_{m} \in \mathrm{NF}\right\}$.
- $\mathrm{WN}=\left\{M \in \Lambda \mid \exists N \in \mathrm{NF}, M \rightarrow{ }_{\beta}^{*} N\right\}$.

12. Let $r \in\{\beta, \beta I, \beta \eta\}$. We say that $M$ has the Church-Rosser property for $r$ (has $r$-CR) if whenever $M \rightarrow{ }_{r}^{*} M_{1}$ and $M \rightarrow{ }_{r}^{*} M_{2}$ then there is an $M_{3}$ such that $M_{1} \rightarrow_{r}^{*} M_{3}$ and $M_{2} \rightarrow{ }_{r}^{*} M_{3}$. We define:

- $\mathrm{CR}^{r}=\{M \mid M$ has $r$-CR $\}$.
- $\mathrm{CR}_{0}^{r}=\left\{x M_{1} \ldots M_{n} \mid n \geq 0 \wedge x \in \mathcal{V} \wedge\left(\forall i \in\{1, \ldots, n\}, M_{i} \in \mathrm{CR}^{r}\right)\right\}$.
- We use CR to denote $\mathrm{CR}^{\beta}$ and $\mathrm{CR}_{0}$ to denote $\mathrm{CR}_{0}^{\beta}$.
- A term is a weak head normal form if it is a $\lambda$-abstraction (a term of the form $\lambda x . M$ ) or if it starts with a variable (a term of the form $x M_{1} \cdots M_{n}$ ). A term is weakly head normalising if it reduces to a weak head normal form. Let $\mathbf{W}^{r}=\{M \in \Lambda \mid \exists n \geq 0, \exists x \in$ $\mathcal{V}, \exists P, P_{1}, \ldots, P_{n} \in \Lambda, M \rightarrow_{r}^{*} \lambda x . P$ or $\left.M \rightarrow_{r}^{*} x P_{1} \ldots P_{n}\right\}$. We use W to denote $\mathrm{W}^{\beta}$.

13. We say that $M$ has the standardisation property if whenever $M \rightarrow{ }_{\beta}^{*} N$ then there is an $M^{\prime}$ such that $M \rightarrow{ }_{h}^{*} M^{\prime}$ and $M^{\prime} \rightarrow_{i}^{*} N$. Let $\mathrm{S}=\{M \in \Lambda \mid M$ has the standardisation property $\}$.
The next lemma deals with the shape of reductions.
Lemma 2.2. 1. $M \xrightarrow{p}_{\beta \eta} M^{\prime}$ iff $\left(M \xrightarrow{p}{ }_{\beta} M^{\prime}\right.$ or $\left.M \xrightarrow{p}{ }_{\eta} M^{\prime}\right)$.
14. If $x \in \operatorname{fv}\left(M_{1}\right)$ then $\operatorname{fv}\left(\left(\lambda x \cdot M_{1}\right) M_{2}\right)=\operatorname{fv}\left(M_{1}\left[x:=M_{2}\right]\right)$.

If $\left(\lambda x . M_{1}\right) M_{2} \in \Lambda$ Ithen $M_{1}\left[x:=M_{2}\right] \in \Lambda I$.
3. If $M \rightarrow{ }_{\beta \eta}^{*} M^{\prime}$ then $\mathrm{fv}\left(M^{\prime}\right) \subseteq \mathrm{fv}(M)$.
4. If $M \rightarrow_{\beta I}^{*} M^{\prime}$ then $\mathrm{fv}(M)=\mathrm{fv}\left(M^{\prime}\right)$ and if $M \in \Lambda I$ then $M^{\prime} \in \Lambda \mathrm{I}$.
5. $\lambda x \cdot M \xrightarrow{p} \beta \eta$ iff $\left(p=1 \cdot p^{\prime}, P=\lambda x \cdot M^{\prime}\right.$ and $\left.M \xrightarrow{p^{\prime}} \beta \eta M^{\prime}\right)$ or ( $p=0, M=P x$ and $x \notin \operatorname{fv}(P)$ ).
6. If $r \in\{\beta I, \beta \eta\}, n \geq 0, P$ is not a direct $r$-reduct of $N=(\lambda x . M) N_{0} \ldots N_{n}$ and $N \rightarrow_{r}^{k} P$, then:
(a) $k \geq 1$, and if $k=1$ then $P=M\left[x:=N_{0}\right] N_{1} \ldots N_{n}$.
(b) There exists a direct $r$-reduct $\left(\lambda x . M^{\prime}\right) N_{0}^{\prime} N_{1}^{\prime} \ldots N_{n}^{\prime}$ of $(\lambda x . M) N_{0} \ldots N_{n}$ such that $M^{\prime}\left[x:=N_{0}^{\prime}\right] N_{1}^{\prime} \ldots N_{n}^{\prime} \rightarrow_{r}^{*} P$.
7. Let $r \in\{\beta I, \beta \eta\}, n \geq 0$ and $(\lambda x . M) N_{0} N_{1} \ldots N_{n} \rightarrow_{r}^{*} P$. There exists $P^{\prime}$ such that $P \rightarrow_{r}^{*} P^{\prime}$ and if $\left(r=\beta I\right.$ and $x \in \mathrm{fv}(M)$ ) or $r=\beta \eta$ then $M\left[x:=N_{0}\right] N_{1} \ldots N_{n} \rightarrow{ }_{r}^{*} P^{\prime}$.
8. There exists $M^{\prime}$ such that $M \xrightarrow{p}{ }_{r} M^{\prime}$ iff $p \in \mathcal{R}_{M}^{r}$.
9. If $M \xrightarrow{p} r M_{1}$ and $M \xrightarrow{p} r M_{2}$ then $M_{1}=M_{2}$.

Proof: 1) By induction on $p$.
2) By induction on the structure of $M_{1}$.
3) (resp. 4)) By induction on the length of the reduction $M \rightarrow_{\beta \eta}^{*} M^{\prime}$ (resp. $M \rightarrow_{\beta I}^{*} M^{\prime}$ ).
5) $\Rightarrow$ ) Let $\lambda x \cdot M \xrightarrow{p}_{\beta \eta} P$. We prove the result by case on $p$. Either $p=0$ and $M=P x$ such that $x \notin \mathrm{fv}(P)$. Or $p=1 . p^{\prime}, P=\lambda x \cdot M^{\prime}$ and $M \xrightarrow{p^{\prime}}{ }_{\beta \eta} M^{\prime}$.
$\Leftrightarrow$ If $P=\lambda x . M^{\prime}$ and $M \rightarrow_{\beta \eta} p M^{\prime}$. So, $\lambda x . M \xrightarrow{1 . p}{ }_{\beta \eta} P$ and $\lambda x . M \rightarrow_{\beta \eta} P$. If $M=P x$ and $x \notin f v P$ then $\lambda x . M=\lambda x . P x \xrightarrow{0}_{\beta \eta} P$, so $\lambda x . M \rightarrow_{\beta \eta} P$.
6a) If $k=0$ then $P=(\lambda x . M) N_{1} N_{1} \ldots N_{n}$ is a direct $r$-reduct of $(\lambda x . M) N_{0} N_{1} \ldots N_{n}$, absurd. So $k \geq 1$. Assume $k=1$, we prove $P=M\left[x:=N_{0}\right] N_{1} \ldots N_{n}$ by induction on $n \geq 0$.
6b) By $6 \mathrm{a}, k \geq 1$. We prove the statement by induction on $k \geq 1$.
7) If $P$ is a direct $r$-reduct of $(\lambda x . M) N_{0} \ldots N_{n}$ then $P=\left(\lambda x . M^{\prime}\right) N_{0}^{\prime} \ldots N_{n}^{\prime}$ such that $M \rightarrow_{r}^{*} M^{\prime}$ and $\forall i \in\{0, \ldots, n\}, N_{i} \rightarrow_{r}^{*} N_{i}^{\prime}$. So $P \rightarrow_{r} M^{\prime}\left[x:=N_{0}^{\prime}\right] N_{1}^{\prime} \ldots N_{n}^{\prime}$ (if $r=\beta I$, note that $x \in \operatorname{fv}\left(M^{\prime}\right)$ by lemma 2.2.4) and $M\left[x:=N_{0}\right] N_{1} \ldots N_{n} \rightarrow_{r}^{*} M^{\prime}\left[x:=N_{0}^{\prime}\right] N_{1}^{\prime} \ldots N_{n}^{\prime}$. If $P$ is not a direct $r$-reduct of $(\lambda x . M) N_{0} \ldots N_{n}$ then by lemma 6.6 b , there exists a direct $r$-reduct, $\left(\lambda x . M^{\prime}\right) N_{0}^{\prime} \ldots N_{n}^{\prime}$, such that $M \rightarrow_{r}^{*} M^{\prime}$ and $\forall i \in\{0, \ldots, n\}, N_{i} \rightarrow_{r}^{*} N_{i}^{\prime}$, of $(\lambda x . M) N_{0} \ldots N_{n}$. We have $M\left[x:=N_{0}\right] N_{1} \ldots N_{n} \rightarrow_{r}^{*}$ $M^{\prime}\left[x:=N_{0}^{\prime}\right] N_{1}^{\prime} \ldots N_{n}^{\prime} \rightarrow_{r}^{*} P$.
8) and 9 ) By induction on the structure of $p$.

### 2.2. Background on Types and Type Systems

This section provides the necessary background for the type systems used in this paper. The type systems $\lambda \cap^{1}$ and $\lambda \cap^{2}$ are used in section 3 , and the type systems $\mathcal{D}$ and $\mathcal{D}_{I}$ are used in section 6 .

Definition 2.3. Let $i \in\{1,2\}$.

1. Let $\mathcal{A}$ be a countably infinite set of type variables, let $\alpha$ range over $\mathcal{A}$ and let $\Omega \notin \mathcal{A}$ be a constant type. The sets of types Type ${ }^{1} \subset$ Type $^{2}$ are defined as follows:

$$
\begin{gathered}
\sigma \in \text { Type }^{1}::=\alpha\left|\sigma_{1} \rightarrow \sigma_{2}\right| \sigma_{1} \cap \sigma_{2} \\
\tau \in \operatorname{Type}^{2}::=\alpha\left|\tau_{1} \rightarrow \tau_{2}\right| \tau_{1} \cap \tau_{2} \mid \Omega
\end{gathered}
$$

2. Let $\Gamma \in \mathcal{B}^{1}=\left\{\left\{x_{1}: \sigma_{1}, \ldots, x_{n}: \sigma_{n}\right\} \mid \forall i, j \in\{1, \ldots, n\} . x_{i}=x_{j} \Rightarrow \sigma_{i}=\sigma_{j}\right\}$ and $\Gamma, \Delta \in \mathcal{B}^{2}=\left\{\left\{x_{1}: \tau_{1}, \ldots, x_{n}: \tau_{n}\right\} \mid \forall i, j \in\{1, \ldots, n\} . x_{i}=x_{j} \Rightarrow \tau_{i}=\tau_{j}\right\}$.
Let $\operatorname{dom}(\Gamma)=\{x \mid x: \sigma \in \Gamma\}$.
When $\operatorname{dom}\left(\Gamma_{1}\right) \cap \operatorname{dom}\left(\Gamma_{2}\right)=\varnothing$, we write $\Gamma_{1}, \Gamma_{2}$ for $\Gamma_{1} \cup \Gamma_{2}$. We write $\Gamma, x: \sigma$ for $\Gamma,\{x: \sigma\}$ and $x: \sigma$ for $\{x: \sigma\}$. We denote $\Gamma=x_{m}: \sigma_{m}, \ldots, x_{n}: \sigma_{n}$ where $n \geq m \geq 0$, by $\left(x_{i}: \sigma_{i}\right)_{n}^{m}$. If $m=1$, we simply denote $\Gamma$ by $\left(x_{i}: \sigma_{i}\right)_{n}$.
If $\Gamma_{1}=\left(x_{i}: \tau_{i}\right)_{n},\left(y_{i}: \tau_{i}^{\prime \prime}\right)_{p}$ and $\Gamma_{2}=\left(x_{i}: \tau_{i}^{\prime}\right)_{n},\left(z_{i}: \tau_{i}^{\prime \prime \prime}\right)_{q}$ where $x_{1}, \ldots, x_{n}$ are the only shared variables, then let $\Gamma_{1} \sqcap \Gamma_{2}=\left(x_{i}: \tau_{i} \cap \tau_{i}^{\prime}\right)_{n},\left(y_{i}: \tau_{i}^{\prime \prime}\right)_{p},\left(z_{i}: \tau_{i}^{\prime \prime \prime}\right)_{q}$.
Let $X \subseteq \mathcal{V}$. We define $\Gamma \upharpoonright X=\Gamma^{\prime} \subseteq \Gamma$ where $\operatorname{dom}\left(\Gamma^{\prime}\right)=\operatorname{dom}(\Gamma) \cap X$.
Let $\sqsubseteq$ be the reflexive transitive closure of the axioms $\tau_{1} \cap \tau_{2} \sqsubseteq \tau_{1}$ and $\tau_{1} \cap \tau_{2} \sqsubseteq \tau_{2}$. If $\Gamma=\left(x_{i}\right.$ : $\left.\tau_{i}\right)_{n}$ and $\Gamma^{\prime}=\left(x_{i}: \tau_{i}^{\prime}\right)_{n}$ then $\Gamma \sqsubseteq \Gamma^{\prime}$ iff for all $i \in\{1, \ldots, n\}, \tau_{i} \sqsubseteq \tau_{i}^{\prime}$.
3.     - Let $\nabla_{1}=\left\{(\right.$ ref $),(t r),\left(i n_{L}\right),\left(i n_{R}\right),(\rightarrow-\cap),\left(\right.$ mon $\left.^{\prime}\right),($ mon $\left.),(\rightarrow-\eta)\right\}$.

Figure 2. The typing rules

- Let $\nabla_{2}=\nabla_{1} \cup\left\{(\Omega),\left(\Omega^{\prime}-l a z y\right)\right\}$.
- Let $\nabla_{D}=\left\{\left(i n_{L}\right),\left(i n_{R}\right)\right\}$.
- Let $\nabla_{D_{I}}=\nabla_{D} \cup\{($ idem $)\}$.
-     - Let Type ${ }^{\nabla_{1}}$, Type ${ }^{\nabla_{D}}$, and Type ${ }^{\nabla_{D_{I}}}$ be Type ${ }^{1}$.
- Let Type ${ }^{\nabla_{2}}$ be Type ${ }^{2}$.
-     - Let $\nabla$ be a set of axioms from Figure 1. The relation $\leq{ }^{\nabla}$ is defined on types Type ${ }^{\nabla}$ and axioms $\nabla$. We use $\leq^{1}$ instead of $\leq^{\nabla_{1}}$ and $\leq^{2}$ instead of $\leq^{\nabla^{2}}$.
- The equivalence relation is defined by: $\tau_{1} \sim^{\nabla} \tau_{2} \Longleftrightarrow \tau_{1} \leq{ }^{\nabla} \tau_{2} \wedge \tau_{2} \leq{ }^{\nabla} \tau_{1}$. We use $\sim^{1}$ instead of $\sim^{\nabla_{1}}$ and $\sim^{2}$ instead of $\sim^{\nabla^{2}}$.
-     - Let the type system $\lambda \cap^{1}$ be the type derivability relation $\vdash^{1}$ between the elements of $\mathcal{B}^{1}, \Lambda$, and Type ${ }^{1}$ generated using the following typing rules of Figure 2: $(a x),\left(\rightarrow_{E}\right)$, $\left(\rightarrow_{I}\right),\left(\cap_{I}\right)$ and $\left(\leq^{1}\right)$ ).
- Let the type system $\lambda \cap^{2}$ be the type derivability relation $\vdash^{2}$ between the elements of $\mathcal{B}^{2}$, $\Lambda$, and Type ${ }^{2}$ generated using the following typing rules of Figure 2: $(a x),\left(\rightarrow_{E}\right),\left(\rightarrow_{I}\right)$, $\left(\cap_{I}\right),\left(\leq^{2}\right)$ and $(\Omega)$.
- Let the type system $\mathcal{D}$ be the type derivability relation $\vdash^{\beta \eta}$ between the elements of $\mathcal{B}^{1}$, $\Lambda$, and Type ${ }^{1}$ generated using the following typing rules of Figure 2: $(a x),\left(\rightarrow_{E}\right),\left(\rightarrow_{I}\right)$, $\left(\cap_{I}\right),\left(\cap_{E 1}\right)$ and $\left(\cap_{E 2}\right)$. Note that system $\mathcal{D}$ does not use subtyping.
- Let the type system $\mathcal{D}_{I}$ be the type derivability relation $\vdash^{\beta I}$ between the elements of $\mathcal{B}^{1}, \Lambda$, and Type ${ }^{1}$ generated using the following typing rule of Figure 2: $\left(a x^{I}\right),\left(\rightarrow_{E^{I}}\right)$, $\left(\rightarrow_{I}\right),\left(\cap_{I}\right),\left(\cap_{E 1}\right)$ and $\left(\cap_{E 2}\right)$. Moreover, in this type system, we assume that $\sigma \cap \sigma=\sigma$. Note that system $\mathcal{D}_{I}$ does not use subtyping.

## 3. Problems of Ghilezan and Likavec's reducibility method [GL02]

This section introduces the reducibility method of [GL02] and shows exactly where it fails. Throughout, we let $\circledast=\lambda x . x x$.

## Definition 3.1. (Type interpretations and the reducibility method of [GL02])

Let $i \in\{1,2\}$ and $\mathcal{P}$ range over $2^{\Lambda}$.

1. The type interpretation $\llbracket-\rrbracket_{-}^{i} \in \operatorname{Type}^{i} \rightarrow 2^{\Lambda} \rightarrow 2^{\Lambda}$ is defined by:

- $\llbracket \alpha \rrbracket_{\mathcal{P}}^{i}=\mathcal{P}$.
- $\llbracket \tau_{1} \cap \tau_{2} \rrbracket_{\mathcal{P}}^{i}=\llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{i} \cap \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{i}$.
- $\llbracket \Omega \rrbracket_{\mathcal{P}}^{2}=\Lambda$.
- $\llbracket \sigma_{1} \rightarrow \sigma_{2} \rrbracket_{\mathcal{P}}^{1}=\left\{M \mid \forall N \in \llbracket \sigma_{1} \rrbracket_{\mathcal{P}}^{1} . M N \in \llbracket \sigma_{2} \rrbracket_{\mathcal{P}}^{1}\right\}$.
- $\llbracket \tau_{1} \rightarrow \tau_{2} \rrbracket_{\mathcal{P}}^{2}=\left\{M \in \mathcal{P} \mid \forall N \in \llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{2}, M N \in \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{2}\right\}$.

2. A valuation of term variables in $\Lambda$ is a function $\nu \in \mathcal{V} \rightarrow \Lambda$. We write $v(x:=M)$ for the function $v^{\prime}$ where $v^{\prime}(x)=M$ and $v^{\prime}(y)=v(y)$ if $y \neq x$.
3. let $\nu$ be a valuation of term variables in $\Lambda$. Then the term interpretation $\llbracket-\rrbracket_{\nu} \in \Lambda \rightarrow \Lambda$ is defined as follows: $\llbracket M \rrbracket_{\nu}=M\left[x_{1}:=\nu\left(x_{1}\right), \ldots, x_{n}:=\nu\left(x_{n}\right)\right]$, where $\mathrm{fv}(() M)=\left\{x_{1}, \ldots, x_{n}\right\}$.
4. $\bullet \nu \models_{\mathcal{P}}^{i} M: \tau$ iff $\llbracket M \rrbracket_{\nu} \in \llbracket \tau \rrbracket_{\mathcal{P}}^{i}$.

- $\nu \models_{\mathcal{P}}^{i} \Gamma$ iff $\forall(x: \tau) \in \Gamma . \nu(x) \in \llbracket \tau \rrbracket_{\mathcal{P}}^{i}$.
- $\Gamma \models_{\mathcal{P}}^{i} M: \tau$ iff $\forall \nu \in \mathcal{V} \rightarrow \Lambda . \nu \models_{\mathcal{P}}^{i} \Gamma \Rightarrow \nu \models_{\mathcal{P}}^{i} M: \tau$.

5. Let $\mathcal{X} \subseteq \Lambda$. We recall here the variable, saturation, closure, and invariance under abstraction predicates defined by Ghilezan and Likavec (see Definitions 3.6 and 3.15 of [GL02]):

- $\operatorname{VAR}^{1}(\mathcal{P}, \mathcal{X}) \Longleftrightarrow \operatorname{VAR}^{2}(\mathcal{P}, \mathcal{X}) \Longleftrightarrow \mathcal{V} \subseteq \mathcal{X}$.
- $\operatorname{SAT}^{1}(\mathcal{P}, \mathcal{X}) \Longleftrightarrow(\forall M \in \Lambda . \forall x \in \mathcal{V} . \forall N \in \mathcal{P} . M[x:=N] \in \mathcal{X} \Rightarrow(\lambda x . M) N \in \mathcal{X})$.
- $\operatorname{SAT}^{2}(\mathcal{P}, \mathcal{X}) \Longleftrightarrow(\forall M, N \in \Lambda . \forall x \in \mathcal{V} . M[x:=N] \in \mathcal{X} \Rightarrow(\lambda x . M) N \in \mathcal{X})$.
- $\mathrm{CLO}^{1}(\mathcal{P}, \mathcal{X}) \Longleftrightarrow(\forall M \in \Lambda . \forall x \in \mathcal{V} . M x \in \mathcal{X} \Rightarrow M \in \mathcal{P})$.
- $\operatorname{CLO}^{2}(\mathcal{P}, \mathcal{X}) \Longleftrightarrow \operatorname{CLO}(\mathcal{P}, \mathcal{X}) \Longleftrightarrow(\forall M \in \Lambda . \forall x \in \mathcal{V} . M \in \mathcal{X} \Rightarrow \lambda x . M \in \mathcal{P})$.
- $\operatorname{VAR}(\mathcal{P}, \mathcal{X}) \Longleftrightarrow\left(\forall x \in \mathcal{V} . \forall n \in \mathbb{N} . \forall N_{1}, \ldots, N_{n} \in \mathcal{P} . x N_{1} \ldots N_{n} \in \mathcal{X}\right)$.
- $\operatorname{SAT}(\mathcal{P}, \mathcal{X}) \Longleftrightarrow\left(\forall M, N \in \Lambda . \forall x \in \mathcal{V} . \forall n \in \mathbb{N} . \forall N_{1}, \ldots, N_{n} \in \mathcal{P}\right.$. $\left.M[x:=N] N_{1} \ldots N_{n} \in \mathcal{X} \Rightarrow(\lambda x . M) N N_{1} \ldots N_{n} \in \mathcal{X}\right)$.
- $\operatorname{INV}(\mathcal{P}) \Longleftrightarrow(\forall M \in \Lambda . \forall x \in \mathcal{V} . M \in \mathcal{P} \Longleftrightarrow \lambda x \cdot M \in \mathcal{P})$.

For $\mathcal{R} \in\left\{\mathrm{VAR}^{i}, \mathrm{SAT}^{i}, \mathrm{CLO}^{i}\right\}$, let $\mathcal{R}(\mathcal{P}) \Longleftrightarrow \forall \tau \in \operatorname{Type}^{i} . \mathcal{R}\left(\mathcal{P}, \llbracket \tau \rrbracket_{\mathcal{P}}^{i}\right)$.

## Lemma 3.2. (Basic lemmas proved in [GL02] and needed for this section)

1. (a) $\llbracket M \rrbracket_{\nu(x:=N)} \equiv \llbracket M \rrbracket_{\nu(x:=x)}[x:=N]$.
(b) $\llbracket M N \rrbracket_{\nu} \equiv \llbracket M \rrbracket_{\nu} \llbracket N \rrbracket_{\nu}$.
(c) $\llbracket \lambda x \cdot M \rrbracket_{\nu} \equiv \lambda x \cdot \llbracket M \rrbracket_{\nu(x:=x)}$.
2. If $\operatorname{VAR}^{1}(\mathcal{P})$ and $\operatorname{CLO}^{1}(\mathcal{P})$ then for all $\sigma \in$ Type $^{1}, \llbracket \sigma \rrbracket_{\mathcal{P}}^{1} \subseteq \mathcal{P}$.
3. If $\operatorname{VAR}^{1}(\mathcal{P}), \operatorname{CLO}^{1}(\mathcal{P}), \operatorname{SAT}^{1}(\mathcal{P})$, and $\Gamma \vdash^{1} M: \sigma$ then $\Gamma \not{ }_{\mathcal{P}}^{1} M: \sigma$.
4. If $\operatorname{VAR}^{1}(\mathcal{P}), \operatorname{CLO}^{1}(\mathcal{P}), \operatorname{SAT}^{1}(\mathcal{P})$, and $\Gamma \vdash^{1} M: \sigma$ then $M \in \mathcal{P}$.
5. For all $\tau \in$ Type $^{2}$, if $\tau \not \chi^{2} \Omega$ then $\llbracket \tau \rrbracket_{\mathcal{P}}^{2} \subseteq \mathcal{P}$.
6. If $\tau_{1} \leq^{2} \tau_{2}$ then $\llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{2} \subseteq \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{2}$.
7. If $\operatorname{VAR}^{2}(\mathcal{P}), \operatorname{SAT}^{2}(\mathcal{P})$ and $\operatorname{CLO}^{2}(\mathcal{P})$ then $\Gamma \vdash^{2} M: \tau$ implies $\Gamma \models_{\mathcal{P}}^{2} M: \tau$.
8. If $\operatorname{VAR}^{2}(\mathcal{P}), \operatorname{SAT}^{2}(\mathcal{P})$ and $\operatorname{CLO}^{2}(\mathcal{P})$ then for all $\tau \in \operatorname{Type}^{2}$, if $\tau \not \chi^{2} \Omega$ and $\Gamma \vdash^{2} M: \tau$ then $M \in \mathcal{P}$.
9. $\mathrm{CLO}(\mathcal{P}, \mathcal{P}) \Rightarrow \forall \tau \in \mathrm{Type}^{2}$. $\tau \not \chi^{2} \Omega \Rightarrow \operatorname{CLO}^{2}\left(\mathcal{P}, \llbracket \tau \rrbracket_{\mathcal{P}}^{2}\right)$.

Note that lemma 3.2.3 states that $\lambda \cap^{1}$ is sound w.r.t. the $\models_{\mathcal{P}}^{1}$ interpretation, and lemma 3.2.7 states that $\lambda \cap^{2}$ is sound w.r.t. the $\models_{\mathcal{P}}^{2}$ interpretation. Based on these soundness lemmas, Ghilezan and Likavec prove lemmas 3.2.4 and 3.2.8 which are key results in their reducibility method.

Ghilezan and Likavec (see Remark 3.9 of [GL02]) note that if $\operatorname{CLO}^{1}(\mathcal{P}), \operatorname{VAR}^{1}(\mathcal{P})$ and $\operatorname{SAT}^{1}(\mathcal{P})$ are true then $\mathrm{SN}_{\beta} \subseteq \mathcal{P}$ (note that this result does not make any use of the type system $\lambda \cap^{1}$ ).

Furthermore, given the notions and statements of definition 3.1 and lemma 3.2, [GL02] states that the predicates $\operatorname{VAR}^{i}(\mathcal{P}), \operatorname{SAT}^{i}(\mathcal{P})$ and $\operatorname{CLO}^{i}(\mathcal{P})$ for $i \in\{1,2\}$ are sufficient to develop the reducibility method. However, in order to prove these predicates (for various instances of $\mathcal{P}$ ), [GL02] states that one needs stronger and easier to prove induction hypotheses. Therefore, Ghilezan and Likavec introduce the following conditions: $\operatorname{VAR}(\mathcal{P}, \mathcal{P}), \operatorname{SAT}(\mathcal{P}, \mathcal{P})$ and $\operatorname{CLO}(\mathcal{P}, \mathcal{P})$ (see Definition 3.1 above or Definition 3.15 of [GL02]). These conditions imply restrictions of $\operatorname{VAR}^{2}(\mathcal{P}, \mathcal{X}), \operatorname{SAT}^{2}(\mathcal{P}, \mathcal{X})$, and $\mathrm{CLO}^{2}(\mathcal{P}, \mathcal{X})$. However, as we show below, this attempt fails. (They do not develop the necessary stronger induction hypotheses for the case when $i=1$, and $\lambda \cap^{1}$ can only type strongly normalisable terms, so we will not consider the case $i=1$ further.)

Our definition 3.4 and lemma 3.5 given below are necessary to establish the results of this section (the failure of the method of [GL02]). In definition 3.4, we use the following fact that the defined preorder relation is commutative, associative and idempotent:

Remark 3.3. Commutativity, associativity and idempotence w.r.t. the preorder relation are given by the axioms $\left(i n_{L}\right),\left(i n_{R}\right),\left(m o n^{\prime}\right),(t r)$ and $(r e f)$ listed in figure 1.

Proof: • Commutativity: by $\left(i n_{R}\right), \tau_{1} \cap \tau_{2} \leq^{2} \tau_{2}$ and by $\left(i n_{L}\right), \tau_{1} \cap \tau_{2} \leq^{2} \tau_{1}$ so by (mon'), $\tau_{1} \cap \tau_{2} \leq^{2}$ $\tau_{2} \cap \tau_{1}$. By $\left(i n_{L}\right), \tau_{2} \cap \tau_{1} \leq^{2} \tau_{2}$ and by $\left(i n_{R}\right), \tau_{2} \cap \tau_{1} \leq^{2} \tau_{1}$ so by $\left(\mathrm{mon}^{\prime}\right), \tau_{2} \cap \tau_{1} \leq^{2} \tau_{1} \cap \tau_{2}$. Hence, $\tau_{1} \cap \tau_{2} \sim^{2} \tau_{2} \cap \tau_{1}$.

- Associativity: by $\left(i n_{R}\right),\left(\tau_{1} \cap \tau_{2}\right) \cap \tau_{3} \leq^{2} \tau_{3}$, by $\left(i n_{L}\right),\left(\tau_{1} \cap \tau_{2}\right) \cap \tau_{3} \leq^{2} \tau_{1} \cap \tau_{2}$, by $\left(i n_{R}\right)$, $\tau_{1} \cap \tau_{2} \leq^{2} \tau_{2}$, by $\left(i n_{L}\right), \tau_{1} \cap \tau_{2} \leq^{2} \tau_{1}$, so by $(t r),\left(\tau_{1} \cap \tau_{2}\right) \cap \tau_{3} \leq^{2} \tau_{1}$ and $\left(\tau_{1} \cap \tau_{2}\right) \cap \tau_{3} \leq^{2} \tau_{2}$. By $\left(\mathrm{mon}^{\prime}\right),\left(\tau_{1} \cap \tau_{2}\right) \cap \tau_{3} \leq^{2} \tau_{2} \cap \tau_{3}$ and again by $\left(\mathrm{mon}^{\prime}\right),\left(\tau_{1} \cap \tau_{2}\right) \cap \tau_{3} \leq^{2} \tau_{1} \cap\left(\tau_{2} \cap \tau_{3}\right)$. By $\left(i n_{L}\right)$, $\tau_{1} \cap\left(\tau_{2} \cap \tau_{3}\right) \leq^{2} \tau_{1}$, by $\left(i n_{R}\right), \tau_{1} \cap\left(\tau_{2} \cap \tau_{3}\right) \leq^{2} \tau_{2} \cap \tau_{3}$, by $\left(i n_{L}\right), \tau_{2} \cap \tau_{3} \leq^{2} \tau_{2}$, by $\left(i n_{R}\right), \tau_{2} \cap \tau_{3} \leq^{2} \tau_{3}$,
so by $(\operatorname{tr}), \tau_{1} \cap\left(\tau_{2} \cap \tau_{3}\right) \leq^{2} \tau_{2}$ and $\tau_{1} \cap\left(\tau_{2} \cap \tau_{3}\right) \leq^{2} \tau_{3}$. By $\left(m o n^{\prime}\right), \tau_{1} \cap\left(\tau_{2} \cap \tau_{3}\right) \leq^{2} \tau_{1} \cap \tau_{2}$ and again by $\left(\right.$ mon $\left.^{\prime}\right)$, $\tau_{1} \cap\left(\tau_{2} \cap \tau_{3}\right) \leq^{2}\left(\tau_{1} \cap \tau_{2}\right) \cap \tau_{3}$. Hence, $\left(\tau_{1} \cap \tau_{2}\right) \cap \tau_{3} \sim^{2} \tau_{1} \cap\left(\tau_{2} \cap \tau_{3}\right)$.
- Idempotence: by $\left(i n_{L}\right), \tau \cap \tau \leq^{2} \tau$ and by (ref) and (mon'), $\tau \leq^{2} \tau \cap \tau$, hence, $\tau \sim^{2} \tau \cap \tau$.

Definition 3.4. Let to $\in$ TypeOmega $::=\Omega \mid t o_{1} \cap t o_{2}$.
Let inInter $\left(\tau, \tau^{\prime}\right)$ be true iff $\tau=\tau^{\prime}$ or $\tau^{\prime}=\tau_{1} \cap \tau_{2}$ and (inInter $\left(\tau, \tau_{1}\right)$ or $\operatorname{inInter}\left(\tau, \tau_{2}\right)$ ).
By commutativity, associativity, and reflexivity we write $\tau_{1} \cap \cdots \cap \tau_{n}$, where $n \geq 1$, instead of $\tau$ iff the following condition holds: in $\operatorname{Inter}\left(\tau^{\prime}, \tau\right)$ iff there exists $i \in\{1, \ldots, n\}$ such that $\tau^{\prime}=\tau_{i}$.

Lemma 3.5. 1. If $\tau_{1} \leq^{2} \tau_{2}$ and $\tau_{1} \in$ TypeOmega then $\tau_{2} \in$ TypeOmega.
2. If $\tau \leq^{2} \tau^{\prime}$ and $\tau^{\prime} \not \chi^{2} \Omega$ then $\tau \not \chi^{2} \Omega$.
3. If $\tau \cap \tau^{\prime} \not \chi^{2} \Omega$ then $\tau \not \chi^{2} \Omega$ or $\tau^{\prime} \not \chi^{2} \Omega$.
4. If $\tau^{\prime} \sim^{2} \Omega$ then $\tau \leq^{2} \tau \cap \tau^{\prime}$.
5. If $\tau \leq^{2} \tau^{\prime}$ and $\operatorname{in} \operatorname{Inter}\left(\tau_{1} \rightarrow \tau_{2}, \tau^{\prime}\right)$ and $\tau_{2} \not \chi^{2} \Omega$ then there exist $n \geq 1$ and $\tau_{1}^{\prime}, \tau_{1}^{\prime \prime}, \ldots, \tau_{n}^{\prime}, \tau_{n}^{\prime \prime}$ such that for all $i \in\{1, \ldots, n\}, \operatorname{inInter}\left(\tau_{i}^{\prime} \rightarrow \tau_{i}^{\prime \prime}, \tau\right)$ and $\tau_{i}^{\prime \prime} \not \chi^{2} \Omega$ and $\tau_{1}^{\prime \prime} \cap \cdots \cap \tau_{n}^{\prime \prime} \leq^{2} \tau_{2}$. Moreover, if $\tau_{1} \sim^{2} \Omega$ then for all $i \in\{1, \ldots, n\}, \tau_{i}^{\prime} \sim^{2} \Omega$.
6. For all $\tau, \tau^{\prime} \in$ Type $^{2}, \alpha \rightarrow \Omega \rightarrow \tau^{\prime} \not \chi^{2} \Omega \rightarrow \tau$.

Proof: 1) By induction on the size of the derivation of $\tau_{1} \leq^{2} \tau_{2}$ and then by case on the last derivation rule.
2) Let $\tau \leq^{2} \tau^{\prime}$. Assume $\tau \sim^{2} \Omega$. Then $\Omega \leq^{2} \tau$ and by transitivity $\Omega \leq^{2} \tau^{\prime}$. Moreover, by $(\Omega), \tau^{\prime} \leq^{2} \Omega$. So $\tau^{\prime} \sim^{2} \Omega$.
3) By $(\Omega), \tau \cap \tau^{\prime} \leq^{2} \Omega$. Let $\tau \sim^{2} \Omega$ and $\tau^{\prime} \sim^{2} \Omega$, so $\Omega \leq^{2} \tau$ and $\Omega \leq^{2} \tau^{\prime}$ and by $\left(\right.$ mon $\left.^{\prime}\right), \Omega \leq^{2} \tau \cap \tau^{\prime}$. 4) By $(\Omega), \tau \leq^{2} \Omega$ and by transitivity, $\tau \leq^{2} \tau^{\prime}$ because $\Omega \leq^{2} \tau^{\prime}$. By (ref), $\tau \leq^{2} \tau$ and by ( $m o n^{\prime}$ ), $\tau \leq^{2} \tau \cap \tau^{\prime}$.
5) By induction on the size of the derivation of $\tau \leq^{2} \tau^{\prime}$ and then by case on the last derivation rule.
6) Let $\tau^{\prime} \in$ Type $^{2}$. First we prove that $\Omega \rightarrow \tau^{\prime} \not \chi^{2} \Omega$. Assume $\Omega \rightarrow \tau^{\prime} \sim^{2} \Omega$ then $\Omega \leq^{2} \Omega \rightarrow \tau^{\prime}$. By lemma 3.5.1, $\Omega \rightarrow \tau^{\prime} \in$ TypeOmega which is false. We distinguish the following two cases:

- Let $\tau \sim^{2} \Omega$. Assume $\alpha \rightarrow \Omega \rightarrow \tau^{\prime} \sim^{2} \Omega \rightarrow \tau$ then $\Omega \rightarrow \tau \leq^{2} \alpha \rightarrow \Omega \rightarrow \tau^{\prime}$. By lemma 3.5.5, $\tau \leq^{2} \Omega \rightarrow \tau^{\prime}$ which is false.
- Let $\tau \not \chi^{2} \Omega$. Assume $\alpha \rightarrow \Omega \rightarrow \tau^{\prime} \sim^{2} \Omega \rightarrow \tau$ then $\alpha \rightarrow \Omega \rightarrow \tau^{\prime} \leq^{2} \Omega \rightarrow \tau$. By lemma 3.5.5, $\alpha \sim^{2} \Omega$ because $\Omega \sim^{2} \Omega$, which is false.

The next lemma establishes the failure of a basic lemma of [GL02].

## Lemma 3.6. (Lemma 3.16 of [GL02] does not hold)

The following lemma of [GL02] does not hold:
$\operatorname{VAR}(\mathcal{P}, \mathcal{P}) \Rightarrow \forall \tau \in \operatorname{Type}^{2} .\left(\forall \tau^{\prime} \in \operatorname{Type}^{2} .\left(\tau \not \chi^{2} \Omega \rightarrow \tau^{\prime}\right) \Rightarrow \operatorname{VAR}\left(\mathcal{P}, \llbracket \tau \rrbracket_{\mathcal{P}}^{2}\right)\right)$.

Proof: To show that the above statement is false, we provide a counterexample. First, note that $\operatorname{VAR}\left(\mathcal{P}, \llbracket \tau \rrbracket_{\mathcal{P}}^{2}\right)$ implies that $\mathcal{V} \subseteq \llbracket \tau \rrbracket_{\mathcal{P}}^{2}$. Let $x \in \mathcal{V}, \tau$ be $\alpha \rightarrow \Omega \rightarrow \alpha$ and $\mathcal{P}$ be WN . By lemma 3.5.6, for all $\tau^{\prime} \in \operatorname{Type}^{2}, \tau \not \chi^{2} \Omega \rightarrow \tau^{\prime}$. Also $\operatorname{VAR}(\mathcal{P}, \mathcal{P})$ is trivially true. Now, assume $\operatorname{VAR}\left(\mathcal{P}, \llbracket \tau \rrbracket_{\mathcal{P}}^{2}\right)$. By definition, $x \in \llbracket \tau \rrbracket_{\mathcal{P}}^{2}$. Then, $x \in \llbracket \alpha \rightarrow \Omega \rightarrow \alpha \rrbracket_{\mathcal{P}}^{2}=\llbracket \tau \rrbracket_{\mathcal{P}}^{2}$. Because $x \in \mathcal{P}=\llbracket \alpha \rrbracket_{\mathcal{P}}^{2}$ and $\circledast \circledast \in \Lambda=\llbracket \Omega \rrbracket_{\mathcal{P}}^{2}$ then $x x(\circledast \circledast) \in \llbracket \alpha \rrbracket_{\mathcal{P}}^{2}=\mathcal{P}$. But $x x(\circledast \circledast) \in \mathcal{P}$ is false, so $\operatorname{VAR}\left(\mathcal{P}, \llbracket \tau \rrbracket_{\mathcal{P}}^{2}\right)$ is false.

The proof for Lemma 3.18 of [GL02] does not work (because of a wrong use of an induction hypothesis) but we have not yet proved or disproved that lemma:

## Remark 3.7. (It is not clear that lemma 3.18 of [GL02] holds)

It is not clear whether the following lemma of [GL02] holds:
$\operatorname{SAT}(\mathcal{P}, \mathcal{P}) \Rightarrow \forall \tau \in \operatorname{Type}^{2} .\left(\forall \tau^{\prime} \in \operatorname{Type}^{2} .\left(\tau \not \chi^{2} \Omega \rightarrow \tau^{\prime}\right) \Rightarrow \operatorname{SAT}\left(\mathcal{P}, \llbracket \tau \rrbracket_{\mathcal{P}}^{2}\right)\right)$.
The proof given in [GL02] does not go through and we have neither been able to prove nor disprove this lemma. It remains that this lemma is not yet proved and hence cannot be used in further proofs.

Furthermore, Ghilezan and Likavec state a proposition (Proposition 3.21) which is the reducibility method for typable terms. However, the proof of that proposition depends on two problematic lemmas (lemma 3.16 which we showed to fail in our lemma 3.6, and lemma 3.18 which by remark 3.7 has not been proved). The following lemma is needed to prove that Proposition 3.21 of [GL02] does not hold:

Lemma 3.8. $\operatorname{VAR}(\mathrm{WN}, \mathrm{WN}), \mathrm{CLO}(\mathrm{WN}, \mathrm{WN}), \operatorname{INV}(\mathrm{WN})$ and $\operatorname{SAT}(\mathrm{WN}, \mathrm{WN})$ hold.
Proof: • $\operatorname{VAR}(\mathrm{WN}, \mathrm{WN})$ holds because $\forall x \in \mathcal{V}, \forall n \geq 0, \forall N_{1}, \ldots, N_{n} \in \mathrm{WN}, x N_{1} \ldots N_{n} \in \mathrm{WN}$.

- $\mathrm{CLO}(\mathrm{WN}, \mathrm{WN})$ holds because if $\exists n, m \geq 0, \exists x_{0} \in \mathcal{V}, \exists N_{1}, \ldots, N_{m} \in \mathrm{NF}$ such that $M \rightarrow_{\beta}^{*}$ $\lambda x_{1} \ldots \lambda x_{n} \cdot x_{0} N_{1} \ldots N_{m}$ then $\forall y \in \mathcal{V}, \lambda y \cdot M \rightarrow_{\beta}^{*} \lambda y \cdot \lambda x_{1} \ldots \lambda x_{n} \cdot x_{0} N_{1} \ldots N_{m} \in$ NF .
- INV(WN) holds because if $\exists n, m \geq 0, \exists x_{0} \in \mathcal{V}, \exists N_{1}, \ldots, N_{m} \in$ NF such that $\lambda x . M \rightarrow_{\beta}^{*}$ $\lambda x_{1} \ldots . \lambda x_{n} \cdot x_{0} N_{1} \ldots N_{m}$ then $x_{1}=x$ and $M \rightarrow_{\beta}^{*} \lambda x_{2} \ldots \lambda x_{n} \cdot x_{0} N_{1} \ldots N_{m}$.
- $\operatorname{SAT}(\mathrm{WN}, \mathrm{WN})$ holds because since if $M[x:=N] N_{1} \ldots N_{n} \in \mathrm{WN}$ where $n \geq 0$ and $N_{1}, \ldots, N_{n} \in$ WN then $\exists P \in \mathrm{NF}$ such that $M[x:=N] N_{1} \ldots N_{n} \rightarrow_{\beta}^{*} P$. Hence, $(\lambda x . M) N N_{1} \ldots N_{n} \rightarrow_{\beta} M[x:=$ $N] N_{1} \ldots N_{n} \rightarrow{ }_{\beta}^{*} P$.

## Lemma 3.9. (Proposition 3.21 of [GL02] does not hold)

Assume $\operatorname{VAR}(\mathcal{P}, \mathcal{P}), \operatorname{SAT}(\mathcal{P}, \mathcal{P})$ and $\operatorname{CLO}(\mathcal{P}, \mathcal{P})$. The following proposition of [GL02] does not hold: $\forall \tau \in$ Type $^{2} .\left(\tau \not \chi^{2} \Omega \wedge \forall \tau^{\prime} \in \operatorname{Type}^{2} .\left(\tau \not \chi^{2} \Omega \rightarrow \tau^{\prime}\right) \wedge \Gamma \vdash^{2} M: \tau \Rightarrow M \in \mathcal{P}\right)$.

Proof: Let $\mathcal{P}$ be WN. Note that $\lambda y . \lambda z . \circledast \circledast \notin \mathrm{WN}$ and $\varnothing \vdash^{2} \lambda y . \lambda z . \circledast \circledast: \alpha \rightarrow \Omega \rightarrow \Omega$ is derivable, where $\alpha \rightarrow \Omega \rightarrow \Omega \not \chi^{2} \Omega$ and by lemma 3.5.6, $\alpha \rightarrow \Omega \rightarrow \Omega \not \chi^{2} \Omega \rightarrow \tau^{\prime}$, for all $\tau^{\prime} \in$ Type $^{2}$. Since $\operatorname{VAR}(\mathrm{WN}, \mathrm{WN}), \mathrm{CLO}(\mathrm{WN}, \mathrm{WN})$ and $\operatorname{SAT}(\mathrm{WN}, \mathrm{WN})$ hold by lemma 3.8, we get a counterexample for Proposition 3.21 of [GL02].

Finally, Ghilezan and Likavec's proof method for untyped terms fails too.

## Lemma 3.10. (Proposition 3.23 of [GL02] does not hold)

The following proposition of [GL02] does not hold:
If $\mathcal{P} \subseteq \Lambda$ is invariant under abstraction (i.e., $\operatorname{INV}(\mathcal{P})$ ), $\operatorname{VAR}(\mathcal{P}, \mathcal{P})$ and $\operatorname{SAT}(\mathcal{P}, \mathcal{P})$ then $\mathcal{P}=\Lambda$.
Proof: As by lemma 3.8, VAR(WN,WN), SAT(WN,WN), and INV $(W N)$ hold, we get a counterexample for Proposition 3.23. Note that the proof in [GL02] depends on Proposition 3.21 which fails.

## 4. How much of the reducibility method of [GL02] can we salvage?

This section provides some indications on the limits of the method. We show how these limits affect the salvation of the method, we partially salvage it, and we show that the obtained method can correctly be used to establish confluence, standardisation, and weak head normal forms but only for restricted sets of lambda terms and types (that we believe to be equal to the set of strongly normalisable terms). We also point out some links between the work done by Ghilezan and Likavec and that of Gallier [Ga198].

Because we proved that Proposition 3.23 of [GL02] is false, we know that the set of properties that a set of terms $\mathcal{P}$ has to satisfy in order to be equal to the set of terms of the untyped $\lambda$-calculus cannot be $\{\operatorname{INV}(\mathcal{P}), \operatorname{VAR}(\mathcal{P}, \mathcal{P}), \operatorname{SAT}(\mathcal{P}, \mathcal{P})\}$. Therefore, even if one changes the soundness result or the type interpretation (the set of realisers) in order to obtain the same result as the one claimed by Ghilezan and Likavec, one also has to come up with a new set of properties.

Proposition 3.23 of [GL02] states a set of properties characterising the set of terms of the untyped $\lambda$-calculus. The predicate $\operatorname{VAR}(\Lambda, \Lambda)$ states that the variables (more generally, the terms of the form $x N M_{1} \cdots M_{n}$ ) belong to the untyped $\lambda$-calculus. The predicate $\operatorname{INV}(\Lambda)$ states among other things that given a $\lambda$-term $M$, the abstraction of a variable over $M$ is a $\lambda$-term too. Therefore, to get a full characterisation of the set of terms of the untyped $\lambda$-calculus, we need predicates that cover the application case, i.e., a predicate, say $\operatorname{APP}(\mathcal{P})$, stating that $(\lambda x . M) N M_{1} \cdots M_{n} \in \mathcal{P}$ if $M, N, M_{1}, \ldots, M_{n} \in \mathcal{P}$, needs to hold. Note that this predicate cannot be equivalent to the sum of properties $\operatorname{VAR}(\mathcal{P}, \mathcal{P}), \operatorname{SAT}(\mathcal{P}, \mathcal{P})$ and $\operatorname{INV}(\mathcal{P})$ since we saw that the set WN satisfies these properties but is not equal to the $\lambda$-calculus. Hence, these properties are not enough to characterise the $\lambda$-calculus.

The problem with these properties is that if one tries to salvage Ghilezan and Likavec's reducibility method, the properties $\operatorname{VAR}(\mathcal{P}, \mathcal{P})$ and $\operatorname{CLO}(\mathcal{P}, \mathcal{P})$ impose a restriction on the arrow types for which the interpretation is in $\mathcal{P}$ (the realisers of arrow types) as we can see below in the arrow type case of the proofs of lemmas 4.4.5 and 4.5. We show at the end of this section that even if the obtained result when considering these restrictions is an improvement of that of Ghilezan and Likavec using the type system $\lambda \cap^{1}$, it is not possible to salvage their method. (Note that this section does not introduce a new set of predicates. Instead it constrains further the type system used in the method.)

The non-trivial types introduced by Gallier [Ga198] (see below) are not much help in this case, because of the precise restriction imposed by $\operatorname{VAR}(\mathcal{P}, \mathcal{P})$. One might also want to consider the sets of properties stated by Gallier [Ga198], but they are unfortunately not easy to prove for CR (ChurchRosser), because they require a proof of $x M \in \mathrm{CR}$ for all $M \in \Lambda$. Moreover, if one succeeds in proving that the variables are included in the interpretation of a defined set of types containing $\Omega \rightarrow \alpha$, where $\Omega$ is interpreted as $\Lambda$ and $\alpha$ as $\mathcal{P}$, then one has proved that $x M \in \mathcal{P}$, which in the case $\mathcal{P}=\mathrm{CR}$ means $M \in \mathrm{CR}$ (this gives the intuition as why the arrow types in OType ${ }^{3}$ defined below are of the form $\rho \rightarrow \varphi$, where $\rho$ cannot be the $\Omega$ type).

It is worth pointing out that part of the work done by Gallier [Ga198] could be adapted to the type system $\lambda \cap^{2}$. Gallier defines the non-trivial types as follows (where $\tau \in$ Type $^{2}$ ):

$$
\psi \in \text { NonTrivial }::=\alpha|\tau \rightarrow \psi| \tau \cap \psi \mid \psi \cap \tau
$$

Note that NonTrivial $\subset$ Type $^{2}$. Types in Type ${ }^{2}$ are then interpreted as follows: $\llbracket \alpha \rrbracket_{\mathcal{P}}=\mathcal{P}, \llbracket \psi \cap \tau \rrbracket_{\mathcal{P}}=$ $\llbracket \tau \cap \psi \rrbracket_{\mathcal{P}}=\llbracket \tau \rrbracket_{\mathcal{P}} \cap \llbracket \psi \rrbracket_{\mathcal{P}}, \llbracket \tau \rrbracket_{\mathcal{P}}=\Lambda$ if $\tau \notin$ NonTrivial and $\llbracket \tau \rightarrow \psi \rrbracket_{\mathcal{P}}=\{M \in \mathcal{P} \mid \forall N \in$ $\left.\llbracket \tau \rrbracket_{\mathcal{P}} . M N \in \llbracket \psi \rrbracket_{\mathcal{P}}\right\}$. One can easily prove that if $\tau_{1} \leq^{2} \tau_{2}$ then $\llbracket \tau_{1} \rrbracket_{\mathcal{P}} \subseteq \llbracket \tau_{2} \rrbracket_{\mathcal{P}}$. Hence, considering the type system $\lambda \cap^{2}$ instead of $\mathcal{D} \Omega$, Gallier's method provides a set of predicates which when satisfied by a
set of terms $\mathcal{P}$ implies that the set of terms typable in the system $\lambda \cap^{2}$ by a non-trivial type is a subset of $\mathcal{P}$. Gallier proved that the set of head-normalising $\lambda$-terms satisfies each of the given predicates.

Using a method similar to Ghilezan and Likavec's method, Gallier also proved that the set of weakly head-normalising terms $(\mathrm{W})$ is equal to the set of terms typable by a weakly non-trivial type in the type system $\mathcal{D} \Omega$. The set of weakly non-trivial types is defined as follows:

$$
\psi \in \text { WeaklyNonTrivial }::=\alpha|\tau \rightarrow \psi| \Omega \rightarrow \Omega|\tau \cap \psi| \psi \cap \tau
$$

As explained above and inspired by Gallier's method, we can now try to salvage Ghilezan and Likavec's method by first restricting the set of realisers when defining the interpretation of the set of types in Type ${ }^{2}$. The different restrictions lead us to the definition of NTType ${ }^{3}$ (where "NT" stands for non trivial since NTType ${ }^{3}=$ NonTrivial) and the following type interpretation:

Definition 4.1. We define NTType ${ }^{3}$ by:

$$
\rho \in \text { NTType }^{3}::=\alpha|\tau \rightarrow \rho| \rho \cap \tau \mid \tau \cap \rho
$$

Note that NTType ${ }^{3} \subset$ Type $^{2}$. We define a new interpretation of the types in Type ${ }^{2}$ as follows:

- $\llbracket \alpha \rrbracket_{\mathcal{P}}^{3}=\mathcal{P}$.
- $\llbracket \tau_{1} \cap \tau_{2} \rrbracket_{\mathcal{P}}^{3}=\llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} \cap \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}$, if $\tau_{1} \cap \tau_{2} \in$ NTType $^{3}$.
- $\llbracket \tau \rrbracket_{\mathcal{P}}^{3}=\Lambda$, if $\tau \notin$ NTType $^{3}$.
- $\llbracket \tau_{1} \rightarrow \tau_{2} \rrbracket_{\mathcal{P}}^{3}=\left\{M \in \mathcal{P} \mid \forall N \in \llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} . M N \in \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}\right\}$, if $\tau_{1} \rightarrow \tau_{2} \in$ NTType $^{3}$.

In order to prove the relation between the stronger induction hypotheses (VAR, SAT, and CLO) and those depending on type interpretations $\left(\mathrm{VAR}^{2}, \mathrm{SAT}^{2}\right.$, and $\left.\mathrm{CLO}^{2}\right)$, and in order to be able to use these stronger induction hypotheses in the soundness lemma, we have to impose other restrictions (we especially need these restrictions to prove lemma 4.4.5 below which itself uses lemma 4.4.2 and the fact that arrow OType ${ }^{3}$ types defined below are of the restricted form $\rho \rightarrow \varphi$ ).

Definition 4.2. We define the set $\mathrm{OType}^{3}$ (where " O " stands for omega) as follows:

$$
\varphi \in \text { OType }^{3}::=\alpha|\Omega| \rho \rightarrow \varphi|\varphi \cap \tau| \tau \cap \varphi
$$

Note that OType ${ }^{3} \subset$ Type $^{2}$.
Let $\Gamma \in \mathcal{B}^{3}=\left\{\left\{x_{1}: \varphi_{1}, \ldots, x_{n}: \varphi_{n}\right\} \mid \forall i, j \in\{1, \ldots, n\} . x_{i}=x_{j} \Rightarrow \varphi_{i}=\varphi_{j}\right\}$, i.e., environments in $\mathcal{B}^{3}$ are built from types in OType ${ }^{3}$.

Let $\vdash^{3}$ be $\vdash^{2}$ where $\mathcal{B}^{2}$ is replaced by $\mathcal{B}^{3}$, and let $\lambda \cap^{3}$ be the type system based on $\vdash^{3}$.
Let $\models_{\mathcal{P}}^{3}$ be the relation $\models_{\mathcal{P}}^{2}$ where $\llbracket \tau \rrbracket_{\mathcal{P}}^{2}$ is replaced by $\llbracket \tau \rrbracket_{\mathcal{P}}^{3}$.
Note that $\vdash^{3}, \lambda \cap^{3}$, and $\models_{\mathcal{P}}^{3}$ are still built on Type ${ }^{2}$.
Due to the saturation predicate and its uses, we could impose further restrictions on the type system. Alternatively, we slightly modify this predicate (for simplicity of notation, we keep the same name):

Definition 4.3. $\operatorname{SAT}(\mathcal{P}, \mathcal{X}) \Longleftrightarrow\left(\forall M, N \in \Lambda . \forall x \in \mathcal{V} . \forall n \in \mathbb{N} . \forall N_{1}, \ldots, N_{n} \in \Lambda\right.$.

$$
\left.M[x:=N] N_{1} \ldots N_{n} \in \mathcal{X} \Rightarrow(\lambda x . M) N N_{1} \ldots N_{n} \in \mathcal{X}\right) .
$$

We can prove that if $\mathcal{P} \in\{\mathrm{CR}, \mathrm{S}, \mathrm{W}\}$, where CR is the Church-Rosser property, S is the standardisation property, and W is the weak head normalisation property, then $\operatorname{SAT}(\mathcal{P}, \mathcal{P})$ holds.

The next lemma (and the relation between the old/new induction hypothesis) is useful for soundness.
Lemma 4.4. 1. $\llbracket \tau_{1} \cap \tau_{2} \rrbracket_{\mathcal{P}}^{3}=\llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} \cap \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}$.
2. $\llbracket \rho \rrbracket_{\mathcal{P}}^{3} \subseteq \mathcal{P}$.
3. If $\tau_{1} \leq^{2} \tau_{2}$ and $\tau_{2} \in$ NTType $^{3}$ then $\tau_{1} \in$ NTType $^{3}$.
4. If $\tau_{1} \leq^{2} \tau_{2}$ then $\llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} \subseteq \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}$.
5. If $\operatorname{VAR}(\mathcal{P}, \mathcal{P})$ then for all $\varphi \in \mathrm{OType}^{3}, \operatorname{VAR}\left(\mathcal{P}, \llbracket \varphi \rrbracket_{\mathcal{P}}^{3}\right)$.
6. If $\operatorname{SAT}(\mathcal{P}, \mathcal{P})$ then for all $\tau \in \operatorname{Type}^{2}, \operatorname{SAT}\left(\mathcal{P}, \llbracket \tau \rrbracket_{\mathcal{P}}^{3}\right)$.

Proof: 1) If $\tau_{1} \cap \tau_{2} \in$ NTType $^{3}$ then it is done by definition. Otherwise $\tau_{1}, \tau_{2} \notin$ NTType $^{3}$.
Hence $\llbracket \tau_{1} \cap \tau_{2} \rrbracket_{\mathcal{P}}^{3}=\Lambda=\Lambda \cap \Lambda=\llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} \cap \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}$.
2) By induction on the structure of $\rho$.
3) By induction on the size of the derivation of $\tau_{1} \leq^{2} \tau_{2}$ and then by case on the last step.
4) By induction on the size of the derivation of $\tau_{1} \leq^{2} \tau_{2}$ and then by case on the last step.
5) By induction on the structure of $\varphi$.
6) By induction on the structure of $\tau$.

We now state the following soundness lemma:
Lemma 4.5. If $\operatorname{VAR}(\mathcal{P}, \mathcal{P}), \operatorname{SAT}(\mathcal{P}, \mathcal{P}), \operatorname{CLO}(\mathcal{P}, \mathcal{P})$ and $\Gamma \vdash^{3} M: \tau$ then $\Gamma \models_{\mathcal{P}}^{3} M: \tau$.
Proof: By induction on the size of the derivation of $\Gamma \vdash^{3} M: \tau$ and then by case on the last rule used in the derivation. Cases dealing with $\tau \notin$ NTType $^{3}$ are trivial since $\llbracket \tau \rrbracket_{\mathcal{P}}^{3}=\Lambda$. The intersection case is also trivial by IH. So we only consider $\tau \in$ NTType $^{3}$ where $\tau$ is not an intersection type.

- $(a x)$ : Let $\nu \models_{\mathcal{P}}^{3} \Gamma, x: \varphi$ then $\nu(x) \in \llbracket \varphi \rrbracket_{\mathcal{P}}^{3}$.
- $\left(\rightarrow_{E}\right)$ : By IH, $\Gamma \models^{3} M: \tau_{1} \rightarrow \tau_{2}$ and $\Gamma \models^{3} N_{a}: \tau_{1}$, so by lemma 3.2.1b, $\Gamma \models_{\mathcal{P}}^{3} M N: \tau_{2}$ (because if $\tau_{2} \in$ NTType $^{3}$ then $\tau_{1} \rightarrow \tau_{2} \in$ NTType $^{3}$ ).
- $\left(\rightarrow_{I}\right):$ By IH, $\Gamma, x: \tau_{1} \models_{\mathcal{P}}^{3} M: \tau_{2}$. Let $\nu \models_{\mathcal{P}}^{3} \Gamma$ and $N \in \llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3}$. Then $\nu(x:=N) \models_{\mathcal{P}}^{3} \Gamma$ since $x \notin \operatorname{dom}(\Gamma)$ and $\nu(x:=N) \models_{\mathcal{P}}^{3} x: \tau_{1}$ since $N \in \llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3}$. Therefore $\nu(x:=N) \models_{\mathcal{P}}^{3}$ $M: \tau_{2}$, i.e. $\llbracket M \rrbracket_{\nu(x:=N)} \in \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}$. Hence, by lemma 3.2.1a, $\llbracket M \rrbracket_{\nu(x:=x)}\left[x:=N \rrbracket \in \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}\right.$. Since $\operatorname{SAT}(\mathcal{P}, \mathcal{P})$ holds, we can apply lemma 4.4.6 to obtain $\left(\lambda x . \llbracket M \rrbracket_{\nu(x:=x)}\right) N \in \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}$. By lemma 3.2.1c, $\left(\llbracket \lambda x . M \rrbracket_{\nu}\right) N \in \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}$. Hence $\llbracket \lambda x . M \rrbracket_{\nu} \in\left\{M \mid \forall N \in \llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} . M N \in \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}\right\}$.
Since $\tau_{1} \in$ OType $^{3}$ and because $\operatorname{VAR}(\mathcal{P}, \mathcal{P})$ holds, then by lemma 4.4.5, $x \in \llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3}$. Hence, by the same argument as above we obtain $\llbracket M \rrbracket_{\nu(x:=x)} \in \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}$. Since $\tau_{1} \rightarrow \tau_{2} \in$ NTType $^{3}$ then $\tau_{2} \in \mathrm{NTType}^{3}$. Because $\operatorname{CLO}(\mathcal{P}, \mathcal{P})$ holds, then by lemma 4.4.2, $\lambda x . \llbracket M \rrbracket_{\nu(x:=x)} \in \mathcal{P}$, and by lemma 3.2.1c, $\llbracket \lambda x . M \rrbracket_{\nu} \in \mathcal{P}$. Hence, we conclude that $\llbracket \lambda x . M \rrbracket_{\nu} \in \llbracket \tau_{1} \rightarrow \tau_{2} \rrbracket_{\mathcal{P}}^{3}$.
- $\left(\leq^{3}\right)$ : We conclude by IH and lemma 4.4.4.
- $(\Omega)$ : This case is trivial because $\Omega \notin$ NTType $^{3}$.

The next lemma states that a set of terms satisfying the Church-Rosser, the standardisation, or the weak head normalisation properties, also satisfies the variable, saturation and closure predicates.

Lemma 4.6. Let $\mathcal{P} \in\{\mathrm{CR}, \mathrm{S}, \mathrm{W}\}$. Then $\operatorname{VAR}(\mathcal{P}, \mathcal{P}), \operatorname{SAT}(\mathcal{P}, \mathcal{P})$, and $\operatorname{CLO}(\mathcal{P}, \mathcal{P})$.
Proof: Straightforward using the relevant property and predicate conditions.
We obtain the following proof method which is our attempt at salvaging the method of [GL02].
Proposition 4.7. If $\Gamma \vdash^{3} M: \rho$ then $M \in \mathrm{CR}, M \in \mathrm{~S}$, and $M \in \mathrm{~W}$.
Proof: By lemma 4.6, lemma 4.4.2 and lemma 4.5
We conjecture that the set of terms typable in our type system $\vdash^{3}$ is no more than the set of strongly normalisable terms.

## 5. Formalising the background on developments

In this section we go through some needed background from [Kri90] on developments and we precisely formalise and establish all the necessary properties. Throughout the paper, we take $c$ to be a metavariable ranging over $\mathcal{V}$. As far as we know, this is the first precise formalisation of developments. Our definition of developments is similar to Koletsos and Stavrinos's [KS08]. A major difference is that Koletsos and Stavrinos [KS08] deal informally with occurrences of redexes while the current paper deal with them formally using paths (see definition 2.1.3 above).

The next definition adapts $\Lambda_{c}$ of [Kri90] to deal with $\beta I$ - and $\beta \eta$-reduction. $\Lambda \mathrm{I}_{c}$ is $\Lambda_{c}$ where in the abstraction construction rule (R1).2, we restrict abstraction to $\Lambda \mathrm{I}$. In $\Lambda \eta_{c}$ we introduce the new rule (R4) and replace the abstraction rule of $\Lambda_{c}$ by (R1). 3 and (R1).4.

Definition 5.1. $\left(\Lambda \eta_{c}, \Lambda \mathbf{I}_{c}\right)$

1. We let $\mathcal{M}_{c}$ range over $\Lambda \eta_{c}, \Lambda \mathrm{I}_{c}$ defined as follows (note that $\Lambda \mathrm{I}_{c} \subset \Lambda \mathrm{I}$ ):
(R1) If $x$ is a variable distinct from $c$ then
2. $x \in \mathcal{M}_{c}$.
3. If $M \in \Lambda \mathrm{I}_{c}$ and $x \in \mathrm{fv}(M)$ then $\lambda x . M \in \Lambda \mathrm{I}_{c}$.
4. If $M \in \Lambda \eta_{c}$ then $\lambda x \cdot M[x:=c(c x)] \in \Lambda \eta_{c}$.
5. If $N x \in \Lambda \eta_{c}$ such that $x \notin \mathrm{fv}(N)$ and $N \neq c$ then $\lambda x . N x \in \Lambda \eta_{c}$.
(R2) If $M, N \in \mathcal{M}_{c}$ then $c M N \in \mathcal{M}_{c}$.
(R3) If $M, N \in \mathcal{M}_{c}$ and $M$ is a $\lambda$-abstraction then $M N \in \mathcal{M}_{c}$.
(R4) If $M \in \Lambda \eta_{c}$ then $c M \in \Lambda \eta_{c}$.

As standard in lambda calculi, the next lemma gives necessary information on terms of $\mathcal{M}_{c}$.

## Lemma 5.2. (Generation)

1. $M[x:=c(c x)] \neq x$ and for any $N, M[x:=c(c x)] \neq N x$.
2. Let $x \notin \mathrm{fv}(M)$. Then, $M[y:=c(c x)] \neq x$ and for any $N, M[y:=c(c x)] \neq N x$.
3. If $M \in \mathcal{M}_{c}$ then $M \neq c$.
4. If $M, N \in \mathcal{M}_{c}$ then $M[x:=N] \neq c$.
5. Let $M N \in \mathcal{M}_{c}$. Then $N \in \mathcal{M}_{c}$ and either:

- $M=c M^{\prime}$ where $M^{\prime} \in \mathcal{M}_{c}$ or
- $M=c$ and $\mathcal{M}_{c}=\Lambda \eta_{c}$ or
- $M=\lambda x$. $P$ is in $\mathcal{M}_{c}$.

6. If $c^{n}(M) \in \mathcal{M}_{c}$ then $M \in \mathcal{M}_{c}$.
7. If $M \in \Lambda \eta_{c}$ and $n \geq 0$ then $c^{n}(M) \in \Lambda \eta_{c}$.
8. If $\lambda x . P \in \Lambda \eta_{c}$ then $x \neq c$ and either:

- $P=N x$ where $N, N x \in \Lambda \eta_{c}, x \notin \mathrm{fv}(N)$ and $N \neq c$ or
- $P=N[x:=c(c x))]$ where $N \in \Lambda \eta_{c}$.

9. If $\lambda x . P \in \Lambda \mathrm{I}_{c}$ then $x \neq c, x \in \mathrm{fv}(P)$ and $P \in \Lambda \mathrm{I}_{c}$.
10. If $M, N \in \mathcal{M}_{c}$ and $x \neq c$ then $M[x:=N] \in \mathcal{M}_{c}$.
11. Let $y \notin\{x, c\}$. Then:

- If $M[x:=c(c x)]=y$ then $M=y$.
- If $M[x:=c(c x)]=P y$ then $M=N y$ and $P=N[x:=c(c x)]$.
- If $M[x:=c(c x)]=\lambda y \cdot P$ then $M=\lambda y \cdot N$ and $P=N[x:=c(c x)]$.
- If $M[x:=c(c x)]=P Q$ then either $M=x, P=c$ and $Q=c x$ or $M=P^{\prime} Q^{\prime}$ and $P=P^{\prime}[x:=c(c x)]$ and $Q=Q^{\prime}[x:=c(c x)]$.
- If $M[x:=c(c x)]=(\lambda y \cdot P) Q$ then $M=\left(\lambda y \cdot P^{\prime}\right) Q^{\prime}$ and $P=P^{\prime}[x:=c(c x)]$ and $Q=$ $Q^{\prime}[x:=c(c x)]$.

12. Let $M \in \Lambda \eta_{c}$.
(a) If $M=\lambda x . P$ then $P \in \Lambda \eta_{c}$.
(b) If $M=\lambda x . P x$ then $P x, P \in \Lambda \eta_{c}, x \notin \mathrm{fv}(P) \cup\{c\}$ and $P \neq c$.
13. (a) Let $x \neq c . M[x:=c(c x)] \xrightarrow{p}_{\beta \eta} M^{\prime}$ iff $M^{\prime}=N[x:=c(c x)]$ and $M \xrightarrow{p}_{\beta \eta} N$.
(b) Let $n \geq 0$. If $c^{n}(M) \xrightarrow{p}_{\beta \eta} M^{\prime}$ then $p=2^{n} \cdot p^{\prime}$ and there exists $N \in \Lambda \eta_{c}$ such that $M^{\prime}=$ $c^{n}(N)$ and $M \xrightarrow{p^{\prime}} \beta \eta$.

Proof: 1) and 2) By induction on the structure of $M$.
3) By cases on the derivation of $M \in \mathcal{M}_{c}$.
4) By cases on the structure of $M$ using 3 ).
5) By cases on the derivation of $M N \in \mathcal{M}_{c}$.
6) By induction on $n$.
7) Easy.
8) By cases on the derivation of $\lambda x \cdot P \in \Lambda \eta_{c}$.
9) By cases on the derivation of $\lambda x . P \in \Lambda \mathrm{I}_{c}$.
10) By induction on the structure of $M \in \mathcal{M}_{c}$.
11) By case on the structure of $M$.

12a) By definition, $x \neq c$. By 8 ), $P=N x$ where $N x \in \Lambda \eta_{c}$ or $P=N[x:=c(c x)]$ where $N \in \Lambda \eta_{c}$. In the second case since by $(\mathrm{R} 4) c(c x) \in \Lambda \eta_{c}$, we get by 10) that $N[x:=c(c x)] \in \Lambda \eta_{c}$.
12b) By 1) and 8).
13a) Both $\Rightarrow$ ) and $\Leftarrow$ ) are by induction on the structure of $p$.
13b) By induction on $n$.
As the formalisation of developments is basic to our work, the next lemma is about sets/paths of redexes.

Lemma 5.3. Let $r \in\{\beta I, \beta \eta\}$ and $\mathcal{F} \subseteq \mathcal{R}_{M}^{r}$.

- If $M \in \mathcal{V}$ then $\mathcal{R}_{M}^{r}=\varnothing$ and $\mathcal{F}=\varnothing$.
- If $M=\lambda x . N$ then $\mathcal{F}^{\prime}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{N}^{r}$ and:
- if $M \in \mathcal{R}^{r}$ then $\mathcal{R}_{M}^{r}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{N}^{r}\right\}$ and $\mathcal{F} \backslash\{0\}=\left\{1 . p \mid p \in \mathcal{F}^{\prime}\right\}$.
- else $\mathcal{R}_{M}^{r}=\left\{1 . p \mid p \in \mathcal{R}_{N}^{r}\right\}$ and $\mathcal{F}=\left\{1 . p \mid p \in \mathcal{F}^{\prime}\right\}$.
- If $M=P Q$ then $\mathcal{F}_{1}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{P}^{r}, \mathcal{F}_{2}=\{p \mid 2 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{Q}^{r}$ and:
- if $M \in \mathcal{R}^{r}$ then $\mathcal{R}_{M}^{r}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{P}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q}^{r}\right\}$ and $\mathcal{F} \backslash\{0\}=\{1 . p \mid p \in$ $\left.\mathcal{F}_{1}\right\} \cup\left\{2 . p \mid p \in \mathcal{F}_{2}\right\}$.
- else $\mathcal{R}_{M}^{r}=\left\{1 . p \mid p \in \mathcal{R}_{P}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q}^{r}\right\}$ and $\mathcal{F}=\left\{1 . p \mid p \in \mathcal{F}_{1}\right\} \cup\left\{2 . p \mid p \in \mathcal{F}_{2}\right\}$.

Proof: The part related to $\mathcal{R}_{M}^{r}$ is by case on the structure of $M$. The part related to $\mathcal{F}$ is also by case on the structure of $M$ and uses the first part.

The next lemma shows the role of redexes w.r.t. substitutions involving $c$.
Lemma 5.4. Let $r \in\{\beta \eta, \beta I\}$ and $x \neq c$.

1. $M \in \mathcal{R}^{\beta \eta}$ iff $M[x:=c(c x)] \in \mathcal{R}^{\beta \eta}$.
2. If $p \in \mathcal{R}_{M}^{\beta \eta}$ then $\left.M[x:=c(c x)]\right|_{p}=\left.M\right|_{p}[x:=c(c x)]$.
3. $p \in \mathcal{R}_{\lambda x . M[x:=c(c x)]}^{\beta \eta}$ iff $p=1 . p^{\prime}$ and $p^{\prime} \in \mathcal{R}_{M[x:=c(c x)]}^{\beta \eta}$.
4. $\mathcal{R}_{M[x:=c(c x)]}^{\beta \eta}=\mathcal{R}_{M}^{\beta \eta}$.
5. $\mathcal{R}_{c^{n}(M)}^{\beta \eta}=\left\{2^{n} . p \mid p \in \mathcal{R}_{M}^{\beta \eta}\right\}$.

Proof: 1) and 2) By induction on the structure of $M$.
$3 \Rightarrow)$ Let $p \in \mathcal{R}_{\lambda x . M[x:=c(c x)]}^{\beta \eta}$. By lemma 5.2.1, $\lambda x . M[x:=c(c x)] \notin \mathcal{R}^{\beta \eta}$ so by lemma 5.3, $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{M[x:=c(c x)]}^{\beta \eta}$.
$\Leftrightarrow)$ Let $p \in \mathcal{R}_{M[x:=c(c x)]}^{\beta \eta}$. By lemma 5.3, 1. $p \in \mathcal{R}_{\lambda x . M[x:=c(c x)]}^{\beta \eta}$.
4) $\Rightarrow)$ Let $p \in \mathcal{R}_{M[x:=c(c x)]}^{\beta \eta}$. We prove the statement by induction on the structure of $M$.
$\Leftrightarrow)$ Let $p \in \mathcal{R}_{M}^{r}$. Then by definition $\left.M\right|_{p} \in \mathcal{R}^{\beta \eta}$. By 1$),\left.M\right|_{p}[x:=c(c x)] \in \mathcal{R}^{\beta \eta}$. By 2$), M[x:=$ $c(c x)]\left.\right|_{p} \in \mathcal{R}^{\beta \eta}$. So $p \in \mathcal{R}_{M[x:=c(c x)]}^{\beta \eta}$.
5) By induction on $n \geq 0$.

The next lemma shows that any element $(\lambda x . P) Q$ of $\Lambda \mathrm{I}_{c}$ (resp. $\Lambda \eta_{c}$ ) is a $\beta I$ - (resp. $\beta \eta_{\text {-) redex, that }}$ $\Lambda \mathrm{I}_{c}$ (resp. $\Lambda \eta_{c}$ ) contains the $\beta I$-redexes (resp. $\beta \eta$-redexes) of all its terms and generalises a lemma given in [Kri90] (and used in [KS08]) stating that $\Lambda \eta_{c}$ (resp. $\Lambda \mathrm{I}_{c}$ ) is closed under $\rightarrow_{\beta \eta^{-}}$(resp. $\rightarrow_{\beta I^{-}}$) reduction.

Lemma 5.5. 1. Let $\left(\mathcal{M}_{c}, r\right) \in\left\{\left(\Lambda \mathbf{I}_{c}, \beta I\right),\left(\Lambda \eta_{c}, \beta \eta\right)\right\}$ and $M \in \mathcal{M}_{c}$.
(a) If $M=(\lambda x \cdot P) Q$ then $M \in \mathcal{R}^{r}$.
(b) If $p \in \mathcal{R}_{M}^{r}$ then $\left.M\right|_{p} \in \mathcal{M}_{c}$.
2. (a) If $M \in \Lambda \eta_{c}$ and $M \rightarrow{ }_{\beta \eta} M^{\prime}$ then $M^{\prime} \in \Lambda \eta_{c}$.
(b) If $M \in \Lambda \mathrm{I}_{c}$ and $M \rightarrow_{\beta I} M^{\prime}$ then $M^{\prime} \in \Lambda \mathrm{I}_{c}$.

Proof: 1a) By case on $r$.
1b) By induction on the structure of $M$.
2a) Let $M \in \Lambda \eta_{c}$ and $M \rightarrow_{\beta \eta} M^{\prime}$. Then there exists $p$ such that $M \xrightarrow{p}{ }_{\beta \eta} M^{\prime}$. We prove that $M^{\prime} \in \Lambda \eta_{c}$ by induction on the structure of $p$.
2b) By induction on $M \rightarrow_{\beta I} M^{\prime}$.
The next definition, taken from [Kri90], erases all the $c$ 's from an $\mathcal{M}_{c}$-term. We extend it to paths.
Definition 5.6. $\left(|-|^{c}\right)$
We define $|M|^{c}$ and $|\langle M, p\rangle|^{c}$ inductively as follows:

- $|x|^{c}=x$
- $|\lambda x . N|^{c}=\lambda x .|N|^{c}$, if $x \neq c$
- $|c P|^{c}=|P|^{c}$
- $|N P|^{c}=|N|^{c}|P|^{c}$ if $N \neq c$
- $|\langle M, 0\rangle|^{c}=0$
- $|\langle\lambda x . M, 1 . p\rangle|^{c}=1 .|\langle M, p\rangle|^{c}$, if $x \neq c$
- $|\langle c M, 2 . p\rangle|^{c}=|\langle M, p\rangle|^{c}$
- $|\langle N M, 2 . p\rangle|^{c}=2 .|\langle M, p\rangle|^{c}$, if $N \neq c$
- $|\langle M N, 1 . p\rangle|^{c}=1 .|\langle M, p\rangle|^{c}$

Let $\mathcal{F} \subseteq$ Path then we define $|\langle M, \mathcal{F}\rangle|^{c}=\left\{|\langle M, p\rangle|^{c} \mid p \in \mathcal{F}\right\}$.
Now, $c^{n}$ is indeed erased from $\left|c^{n}(M)\right|^{c}$ and from $\left|c^{n}(N)\right|^{c}$ for any $c^{n}(N)$ subterm of $M$.
Lemma 5.7. 1. Let $n \geq 0$ then $\left|c^{n}(M)\right|^{c}=|M|^{c}$.
2. $\left|\left\langle c^{n}(M), \mathcal{R}_{c^{n}(M)}^{\beta \eta}\right\rangle\right|^{c}=\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}$.
3. $\left|\left\langle c^{n}(M), 2^{n} \cdot p\right\rangle\right|^{c}=|\langle M, p\rangle|^{c}$.
4. Let $|M|^{c}=P$.

- If $P \in \mathcal{V}$ then $\exists n \geq 0$ such that $M=c^{n}(P)$.
- If $P=\lambda x \cdot Q$ then $\exists n \geq 0$ such that $M=c^{n}(\lambda x . N)$ and $|N|^{c}=Q$.
- If $P=P_{1} P_{2}$ then $\exists n \geq 0$ such that $M=c^{n}\left(M_{1} M_{2}\right), M_{1} \neq c,\left|M_{1}\right|^{c}=P_{1}$ and $\left|M_{2}\right|^{c}=P_{2}$.

Proof: 1), 2) and 3) By induction on $n$.
4) Each case is by induction on the structure of $M$.

The next lemma shows that: if the $c$-erasures of two paths of $M$ are equal, then these paths are also equal and inside a term; substituting $x$ by $c(c x)$ is undone by $c$-erasure; $c$ is definitely erased from the free variables of $|M|^{c}$; erasure propagates through substitutions; and $c$-erasing a $\Lambda I_{c}$-term returns a $\Lambda \mathrm{I}$-term.

Lemma 5.8. 1. Let $r \in\{\beta I, \beta \eta\}$. If $p, p^{\prime} \in \mathcal{R}_{M}^{r}$ and $|\langle M, p\rangle|^{c}=\left|\left\langle M, p^{\prime}\right\rangle\right|^{c}$ then $p=p^{\prime}$.
2. Let $x \neq c$. Then, $|M[x:=c(c x)]|^{c}=|M|^{c}$.
3. Let $x \neq c$ and $p \in \mathcal{R}_{M}^{\beta \eta}$. Then, $|\langle M[x:=c(c x)], p\rangle|^{c}=|\langle M, p\rangle|^{c}$.
4. If $M \in \mathcal{M}_{c}$ then $\operatorname{fv}(M) \backslash\{c\}=\operatorname{fv}\left(|M|^{c}\right)$.
5. If $M, N \in \mathcal{M}_{c}$ and $x \neq c$ then $|M[x:=N]|^{c}=|M|^{c}\left[x:=|N|^{c}\right]$.
6. If $M \in \Lambda \mathrm{I}_{c}$ then $|M|^{c} \in \Lambda \mathrm{I}$.
7. Let $\left(\mathcal{M}_{c}, r\right) \in\left\{\left(\Lambda I_{c}, \beta I\right),\left(\Lambda \eta_{c}, \beta \eta\right)\right\}$ and $M, M_{1}, N_{1}, M_{2}, N_{2} \in \mathcal{M}_{c}$.
(a) If $p \in \mathcal{R}_{M}^{r}$ and $M \xrightarrow{p}{ }_{r} M^{\prime}$ then $|M|^{c}{ }^{p^{\prime}}{ }_{r}\left|M^{\prime}\right|^{c}$ such that $p^{\prime}=|\langle M, p\rangle|^{c}$.
(b) Let $x \neq c,\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c},\left|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{r}\right\rangle\right|^{c},\left|M_{1}\right|^{c}=\left|M_{2}\right|^{c}$ and $\left|N_{1}\right|^{c}=\left|N_{2}\right|^{c}$. Then, $\mid\left.\left\langle M_{1}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}\left[x:=N_{1} \mid\right.}^{r}\right|\right|^{c} \subseteq \mid\left.\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right\rangle}^{r}\right|\right|^{c}$.
(c) Let $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$ and $\left|M_{1}\right|^{c}=\left|M_{2}\right|^{c}$. If $M_{1} \xrightarrow{p_{1}} r M_{1}^{\prime}, M_{2} \xrightarrow{p_{2}} r M_{2}^{\prime}$ such that $\left|\left\langle M_{1}, p_{1}\right\rangle\right|^{c}=\left|\left\langle M_{2}, p_{2}\right\rangle\right|^{c}$ then $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}$.

Proof: 1) ... 6) By induction on the structure of $M$.
7a) By induction on the structure of $p$.
7 b ) and 7 c ) By induction on the structure of $M_{1}$.

## 6. Reducibility method for the $\mathbf{C R}$ proofs w.r.t. $\beta I$ - and $\beta \eta$-reductions

In this section, we introduce the reducibility semantics for both $\beta I$ - and $\beta \eta$-reductions and establish its soundness (lemma 6.4). Then, we show that all terms typable in either $\mathcal{D}_{I}$ or $\mathcal{D}$ satisfy the Church-Rosser property, and that all terms of $\Lambda \mathrm{I}_{c}$ (resp. $\Lambda \eta_{c}$ ) are typable in system $\mathcal{D}_{I}$ (resp. $\mathcal{D}$ ).

The next definition introduces a reducibility semantics for Type ${ }^{1}$ types.
Definition 6.1. 1. Let $r \in\{\beta I, \beta \eta\}$. We define the type interpretation $\llbracket-\rrbracket^{r}:$ Type $^{1} \rightarrow 2^{\Lambda}$ by:

- $\llbracket \alpha \rrbracket^{r}=\mathrm{CR}^{r}$, where $\alpha \in \mathcal{A}$.
- $\llbracket \sigma \cap \tau \rrbracket^{r}=\llbracket \sigma \rrbracket^{r} \cap \llbracket \tau \rrbracket^{r}$.
- $\llbracket \sigma \rightarrow \tau \rrbracket^{r}=\left\{M \in \mathrm{CR}^{r} \mid \forall N \in \llbracket \sigma \rrbracket^{r} . M N \in \llbracket \tau \rrbracket^{r}\right\}$.

2. A set $\mathcal{X} \subseteq \Lambda$ is saturated iff $\forall n \geq 0 . \forall M, N, M_{1}, \ldots, M_{n} \in \Lambda . \forall x \in \mathcal{V}$.

$$
M[x:=N] M_{1} \ldots M_{n} \in \mathcal{X} \Rightarrow(\lambda x . M) N M_{1} \ldots M_{n} \in \mathcal{X}
$$

3. A set $\mathcal{X} \subseteq \Lambda \mathrm{I}$ is I-saturated iff $\forall n \geq 0 . \forall M, N, M_{1}, \ldots, M_{n} \in \Lambda . \forall x \in \mathcal{V}$.

$$
x \in \operatorname{fv}(M) \Rightarrow M[x:=N] M_{1} \ldots M_{n} \in \mathcal{X} \Rightarrow(\lambda x . M) N M_{1} \ldots M_{n} \in \mathcal{X} .
$$

The next background lemma is familiar to many type systems.
Lemma 6.2. 1. If $\Gamma \vdash^{\beta I} M: \sigma$ then $M \in \Lambda \mathrm{I}$ and $\mathrm{fv}(M)=\operatorname{dom}(\Gamma)$.
2. Let $\Gamma \vdash^{\beta \eta} M: \sigma$. Then $\mathrm{fv}(M) \subseteq \operatorname{dom}(\Gamma)$ and if $\Gamma \subseteq \Gamma^{\prime}$ then $\Gamma^{\prime} \vdash^{\beta \eta} M: \sigma$.
3. Let $r \in\{\beta I, \beta \eta\}$. If $\Gamma \vdash^{r} M: \sigma, \sigma \sqsubseteq \sigma^{\prime}$ and $\Gamma^{\prime} \sqsubseteq \Gamma$ then $\Gamma^{\prime} \vdash^{r} M: \sigma^{\prime}$.

Proof: 1) By induction on $\Gamma \vdash^{\beta I} M: \sigma$.
2) By induction on $\Gamma \vdash^{\beta \eta} M: \sigma$.
3) First prove: if $\Gamma \vdash^{r} M: \sigma$, and $\sigma \sqsubseteq \sigma^{\prime}$ then $\Gamma \vdash^{r} M: \sigma^{\prime}$ by induction on $\sigma \sqsubseteq \sigma^{\prime}$. Then, do the proof of 3. by induction on $\Gamma \vdash^{r} M: \sigma$.

The next lemma states that the interpretations of types are saturated and only contain terms that are Church-Rosser. Krivine [Kri90] proved a similar result for $r=\beta$ and where $\mathrm{CR}_{0}^{r}$ and $\mathrm{CR}^{r}$ were replaced by the corresponding sets of strongly normalising terms. Koletsos and Stavrinos [KS08] adapted Krivine's lemma for Church-Rosser w.r.t. $\beta$-reduction instead of strong normalisation. Here, we adapt the result to $\beta I$ and $\beta \eta$.

Lemma 6.3. Let $r \in\{\beta I, \beta \eta\}$.

1. $\forall \sigma \in \mathrm{Type}^{1}$. $\mathrm{CR}_{0}^{r} \subseteq \llbracket \sigma \rrbracket^{r} \subseteq \mathrm{CR}^{r}$.
2. $\mathrm{CR}^{\beta I}$ is I-saturated.
3. $\mathrm{CR}^{\beta \eta}$ is saturated.
4. $\forall \sigma \in$ Type $^{1} . \llbracket \sigma \rrbracket^{\beta I}$ is I-saturated.
5. $\forall \sigma \in$ Type $^{1}$. $\llbracket \sigma \rrbracket^{\beta \eta}$ is saturated.

Proof: When $M \rightarrow_{r}^{*} N$ and $M \rightarrow_{r}^{*} P$, we write $M \rightarrow_{r}^{*}\{N, P\}$.

1) By induction on $\sigma \in$ Type $^{1}$.
2) Let $M[x:=N] N_{1} \ldots N_{n} \in \mathrm{CR}^{\beta I}$ where $n \geq 0, x \in \operatorname{fv}(M)$ and $(\lambda x . M) N N_{1} \ldots N_{n} \rightarrow_{\beta I}^{*}$ $\left\{M_{1}, M_{2}\right\}$. By lemma 2.2.7, there exist $M_{1}^{\prime}$ and $M_{2}^{\prime}$ such that $M_{1} \rightarrow_{\beta I}^{*} M_{1}^{\prime}, M[x:=N] N_{1} \ldots N_{n} \rightarrow{ }_{\beta I}^{*}$ $M_{1}^{\prime}, M_{2} \rightarrow_{\beta I}^{*} M_{2}^{\prime}$ and $M[x:=N] N_{1} \ldots N_{n} \rightarrow_{\beta I}^{*} M_{2}^{\prime}$. Then, using $M[x:=N] N_{1} \ldots N_{n} \in \mathrm{CR}^{\beta I}$.
3) Let $M[x:=N] N_{1} \ldots N_{n} \in \mathrm{CR}^{\beta \eta}$ where $n \geq 0$ and $(\lambda x . M) N N_{1} \ldots N_{n} \rightarrow_{\beta \eta}^{*}\left\{M_{1}, M_{2}\right\}$. By lemma 2.2.7, there exist $M_{1}^{\prime}$ and $M_{2}^{\prime}$ such that $M_{1} \rightarrow_{\beta \eta}^{*} M_{1}^{\prime}, M[x:=N] N_{1} \ldots N_{n} \rightarrow_{\beta \eta}^{*} M_{1}^{\prime}, M_{2} \rightarrow_{\beta \eta}^{*}$ $M_{2}^{\prime}$ and $M[x:=N] N_{1} \ldots N_{n} \rightarrow_{\beta \eta}^{*} M_{2}^{\prime}$. Then we conclude using $M[x:=N] N_{1} \ldots N_{n} \in \mathrm{CR}^{\beta \eta}$.
4) and 5) By induction on $\sigma$.

Next, it is straightforward to adapt (and prove) the soundness lemma of [Kri90] to both $\vdash^{\beta I}$ and $\vdash^{\beta \eta}$.
Lemma 6.4. Let $r \in\{\beta I, \beta \eta\}$. If $x_{1}: \sigma_{1}, \ldots, x_{n}: \sigma_{n} \vdash^{r} M: \sigma$ and $\forall i \in\{1, \ldots, n\}, N_{i} \in \llbracket \sigma_{i} \rrbracket^{r}$ then $M\left[\left(x_{i}:=N_{i}\right)_{1}^{n}\right] \in \llbracket \sigma \rrbracket^{r}$.

Proof: By induction on $x_{1}: \sigma_{1}, \ldots, x_{n}: \sigma_{n} \vdash^{r} M: \sigma$.
Finally, we adapt a corollary from [KS08] to show that every term of $\Lambda$ typable in system $\mathcal{D}_{I}$ (resp. $\mathcal{D}$ ) has the $\beta I$ (resp. $\beta \eta$ ) Church-Rosser property.

Corollary 6.5. Let $r \in\{\beta I, \beta \eta\}$. If $\Gamma \vdash^{r} M: \sigma$ then $M \in \mathbf{C R}^{r}$.
Proof: Let $\Gamma=\left(x_{i}: \sigma_{i}\right)_{n}$. By lemma 6.3, $\forall i \in\{1, \ldots, n\}, x_{i} \in \llbracket \sigma_{i} \rrbracket^{r}$, so by lemma 6.4 and again by lemma 6.3, $M \in \llbracket \sigma \rrbracket^{r} \subseteq \mathrm{CR}^{r}$.

To accommodate $\beta I$ - and $\beta \eta$-reduction, the next lemma generalises a lemma given in [Kri90] (and used in [KS08]). This lemma states that every term of $\Lambda \mathrm{I}_{c}\left(\right.$ resp. $\left.\Lambda \eta_{c}\right)$ is typable in system $\mathcal{D}_{I}$ (resp. $\mathcal{D}$ ).

Lemma 6.6. Let $\operatorname{fv}(M) \backslash\{c\}=\left\{x_{1}, \ldots, x_{n}\right\} \subseteq \operatorname{dom}(\Gamma)$ where $c \notin \operatorname{dom}(\Gamma)$.

1. If $M \in \Lambda \mathrm{I}_{c}$ then for $\Gamma^{\prime}=\Gamma \upharpoonright \mathrm{fv}(M), \exists \sigma, \tau \in \operatorname{Type}^{1}$ such that if $c \in \operatorname{fv}(M)$ then $\Gamma^{\prime}, c: \sigma \vdash^{\beta I} M: \tau$, and if $c \notin \operatorname{fv}(M)$ then $\Gamma^{\prime} \vdash^{\beta I} M: \tau$.
2. If $M \in \Lambda \eta_{c}$ then $\exists \sigma, \tau \in \operatorname{Type}^{1}$ such that $\Gamma, c: \sigma \vdash^{\beta \eta} M: \tau$.

Proof: By induction on $M$. Note that by Lemma 5.2, $M \neq c$.

## 7. Adapting Koletsos and Stavrinos's method [KS08] to $\beta I$-developments

Koletsos and Stavrinos [KS08] gave a proof of Church-Rosser for $\beta$-reduction for the intersection type system $\mathcal{D}$ of Definition 2.3 (studied in detail by Krivine in [Kri90]) and showed that this can be used to establish confluence of $\beta$-developments without using strong normalisation. In this section, we adapt their proof to $\beta I$. First, we adapt and formalise a number of definitions and lemmas given by Krivine in [Kri90] in order to make them applicable to $\beta I$-developments. Then, we adapt [KS08] to establish the confluence of $\beta I$-developments and hence of $\beta I$-reduction.

### 7.1. Formalising $\beta I$-developments

The next definition, taken from [Kri90] (and used in [KS08]) uses the variable $c$ to "freeze" the $\beta I$ redexes of $M$ which are not in the set $\mathcal{F}$ of $\beta I$-redex occurrences in $M$, and to neutralise applications so that they cannot be transformed into redexes after $\beta I$-reduction. For example, in $c(\lambda x . x) y, c$ is used to freeze the $\beta I$-redex $(\lambda x . x) y$.

Definition 7.1. $\left(\Phi^{c}(-,-)\right)$
Let $M \in \Lambda \mathrm{I}$, such that $c \notin \mathrm{fv}(M)$ and $\mathcal{F} \subseteq \mathcal{R}_{M}^{\beta I}$.

1. If $M=x$ then $\mathcal{F}=\varnothing$ and $\Phi^{c}(x, \mathcal{F})=x$
2. If $M=\lambda x . N$ such that $x \neq c$ and $\mathcal{F}^{\prime}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{N}^{\beta I}$ then $\Phi^{c}(\lambda x . N, \mathcal{F})=$ $\lambda x . \Phi^{c}\left(N, \mathcal{F}^{\prime}\right)$.
3. If $M=N P, \mathcal{F}_{1}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{N}^{\beta I}$ and $\mathcal{F}_{2}=\{p \mid 2 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{P}^{\beta I}$ then

$$
\Phi^{c}(N P, \mathcal{F})= \begin{cases}c \Phi^{c}\left(N, \mathcal{F}_{1}\right) \Phi^{c}\left(P, \mathcal{F}_{2}\right) & \text { if } 0 \notin \mathcal{F} \\ \Phi^{c}\left(N, \mathcal{F}_{1}\right) \Phi^{c}\left(P, \mathcal{F}_{2}\right) & \text { otherwise }\end{cases}
$$

The next lemma is an adapted version of a lemma which appears in [KS08] and which in turns adapts a lemma from [Kri90].

Lemma 7.2. 1. If $M \in \Lambda \mathrm{I}, c \notin \mathrm{fv}(M)$, and $\mathcal{F} \subseteq \mathcal{R}_{M}^{\beta I}$ then
(a) $\operatorname{fv}(M)=\operatorname{fv}\left(\Phi^{c}(M, \mathcal{F})\right) \backslash\{c\}$.
(b) $\Phi^{c}(M, \mathcal{F}) \in \Lambda \mathrm{I}_{c}$.
(c) $\left|\Phi^{c}(M, \mathcal{F})\right|^{c}=M$.
(d) $\left|\left\langle\Phi^{c}(M, \mathcal{F}), \mathcal{R}_{\Phi^{c}(M, \mathcal{F})}^{\beta I}\right\rangle\right|^{c}=\mathcal{F}$.
2. Let $M \in \Lambda \mathrm{I}_{c}$.
(a) $\left|\left\langle M, \mathcal{R}_{M}^{\beta I}\right\rangle\right|^{c} \subseteq \mathcal{R}_{|M|^{c}}^{\beta I}$ and $M=\Phi^{c}\left(|M|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta I}\right\rangle\right|^{c}\right)$.
(b) $\left.\left.\langle | M\right|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta I}\right\rangle\right|^{c}\right\rangle$ is the one and only pair $\langle N, \mathcal{F}\rangle$ such that $N \in \Lambda \mathrm{I}, c \notin \operatorname{fv}(N), \mathcal{F} \subseteq \mathcal{R}_{N}^{\beta I}$ and $\Phi^{c}(N, \mathcal{F})=M$.

Proof: All items of 1) are by induction on the structure of $M \in \Lambda \mathrm{I}$. Note that 1 b ) uses 1 a ) and that 1 d ) uses 1b).
2a) By induction on the construction of $M \in \Lambda \mathrm{I}_{c}$. Note that by lemma $6,|M|^{c} \in \Lambda \mathrm{I}$.
2b) By lemma 6, $|M|^{c} \in \Lambda$ I. By lemma 4, $c \notin \mathrm{fv}\left(|M|^{c}\right)$. By $2 \mathrm{a},\left|\left\langle M, \mathcal{R}_{M}^{\beta I}\right\rangle\right|^{c} \subseteq \mathcal{R}_{|M|^{c}}^{\beta I}$ and $M=$ $\Phi^{c}\left(|M|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta I}\right\rangle\right|^{c}\right)$. To show unicity, let $\left\langle N^{\prime}, \mathcal{F}^{\prime}\right\rangle$ be another such pair. We have $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{N^{\prime}}^{\beta I}$ and $M=\Phi^{c}\left(N^{\prime}, \mathcal{F}^{\prime}\right)$. Then, $|M|^{c}=\left|\Phi^{c}\left(N^{\prime}, \mathcal{F}^{\prime}\right)\right|^{c}={ }^{1 c} N^{\prime}$ and $\mathcal{F}^{\prime}={ }^{1 d}\left|\left\langle\Phi^{c}\left(N^{\prime}, \mathcal{F}^{\prime}\right), \mathcal{R}_{\Phi^{c}\left(N^{\prime}, \mathcal{F}^{\prime}\right)}^{\beta I}\right\rangle\right|^{c}=$ $\left|\left\langle M, \mathcal{R}_{M}^{\beta I}\right\rangle\right|^{c}$.

The next lemma is needed to define $\beta I$-developments.
Lemma 7.3. Let $M \in \Lambda \mathrm{I}$, such that $c \notin \mathrm{fv}(M), \mathcal{F} \subseteq \mathcal{R}_{M}^{\beta I}, p \in \mathcal{F}$ and $M \xrightarrow{p}{ }_{\beta I} M^{\prime}$. Then, there exists a unique set $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta I}$ such that $\Phi^{c}(M, \mathcal{F}) \xrightarrow{p^{\prime}} \beta_{I} \Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$ and $\left|\left\langle\Phi^{c}(M, \mathcal{F}), p^{\prime}\right\rangle\right|^{c}=p$.

Proof: By lemma 7.2.1c and lemma 5.8.5.8.1, there exists a unique $p^{\prime} \in \mathcal{R}_{\Phi^{c}(M, \mathcal{F})}^{\beta I}$, such that $\left|\left\langle\mathcal{R}_{\Phi^{c}(M, \mathcal{F})}^{\beta I}, p^{\prime}\right\rangle\right|^{c}=p$. By lemma 2.2.8, there exists $P$ such that $\Phi^{c}(M, \mathcal{F}){\xrightarrow{p^{\prime}}}_{\beta I} P$. By lemma 5.8.7a, $M={ }^{7.2 .1 c}\left|\Phi^{c}(M, \mathcal{F})\right|^{c} \xrightarrow{p_{0}}{ }_{\beta I}|P|^{c}$, such that $\left|\left\langle\mathcal{R}_{\Phi^{c}(M, \mathcal{F})}^{\beta I}, p^{\prime}\right\rangle\right|^{c}=p_{0}$. So $p=p_{0}$ and by lemma 2.2.9, $M^{\prime}=|P|^{c}$. Let $\mathcal{F}^{\prime}=\left|\left\langle P, \mathcal{R}_{P}^{\beta I}\right\rangle\right|^{c}$. Because, $\Phi^{c}(M, \mathcal{F}) \xrightarrow{p^{\prime}}{ }_{\beta I} P$, by lemma 2 and lemma 7.2.1b, $P \in \Lambda \mathrm{I}_{c}$. By lemma 7.2.2a, $P=\Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$ and $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta I}$. By lemma 7.2.2b, $\mathcal{F}^{\prime}$ is unique.

We follow [Kri90] and define the set of $\beta I$-residuals of a set of $\beta I$-redexes $\mathcal{F}$ relative to a sequence of $\beta I$-redexes. First, we give the definition relative to one redex.

Definition 7.4. Let $M \in \Lambda \mathrm{I}$, such that $c \notin \operatorname{fv}(M), \mathcal{F} \subseteq \mathcal{R}_{M}^{\beta I}, p \in \mathcal{F}$ and $M \xrightarrow{p}_{\beta I} M^{\prime}$. By lemma 7.3, there exists a unique $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta I}$ such that $\Phi^{c}(M, \mathcal{F}) \xrightarrow{p^{\prime}}{ }_{\beta I} \Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$ and $\left|\left\langle\Phi^{c}(M, \mathcal{F}), p^{\prime}\right\rangle\right|^{c}=p$. We call $\mathcal{F}^{\prime}$ the set of $\beta I$-residuals in $M^{\prime}$ of the set of $\beta I$-redexes $\mathcal{F}$ in $M$ relative to $p$.

## Definition 7.5. ( $\beta I$-development)

Let $M \in \Lambda \mathrm{I}$ where $c \notin \operatorname{fv}(M)$ and $\mathcal{F} \subseteq \mathcal{R}_{M}^{\beta I}$. A one-step $\beta I$-development of $\langle M, \mathcal{F}\rangle$, denoted $\langle M, \mathcal{F}\rangle \rightarrow_{\beta I d}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle$, is a $\beta I$-reduction $M \xrightarrow{p}{ }_{\beta I} M^{\prime}$ where $p \in \mathcal{F}$ and $\mathcal{F}^{\prime}$ is the set of $\beta I$-residuals in $M^{\prime}$ of the set of $\beta I$-redexes $\mathcal{F}$ in $M$ relative to $p$. A $\beta I$-development is the transitive closure of a onestep $\beta I$-development. We write also $M \stackrel{\mathcal{F}}{\beta}_{\beta I d} M_{n}$ for the $\beta I$-development $\langle M, \mathcal{F}\rangle \rightarrow_{\beta I d}^{*}\left\langle M_{n}, \mathcal{F}_{n}\right\rangle$.

### 7.2. Confluence of $\beta I$-developments hence of $\beta I$-reduction

The next lemma is informative about $\beta I$-developments. It relates $\beta I$-reductions of frozen terms to $\beta I$ developments, and it states that given a $\beta I$-development, one can always define a new development that allows at least the same reductions.

Lemma 7.6. 1. Let $M \in \Lambda \mathrm{I}$, such that $c \notin \mathrm{fv}(M)$ and $\mathcal{F} \subseteq \mathcal{R}_{M}^{\beta I}$. Then: $\langle M, \mathcal{F}\rangle \rightarrow_{\beta I d}^{*}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle \Longleftrightarrow$ $\Phi^{c}(M, \mathcal{F}) \rightarrow_{\beta I}^{*} \Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$.
2. Let $M \in \Lambda \mathrm{I}$, such that $c \notin \mathrm{fv}(M)$ and $\mathcal{F}_{1} \subseteq \mathcal{F}_{2} \subseteq \mathcal{R}_{M}^{\beta I}$. If $\left\langle M, \mathcal{F}_{1}\right\rangle \rightarrow_{\beta I d}\left\langle M^{\prime}, \mathcal{F}_{1}^{\prime}\right\rangle$ then there exists $\mathcal{F}_{2}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta I}$ such that $\mathcal{F}_{1}^{\prime} \subseteq \mathcal{F}_{2}^{\prime}$ and $\left\langle M, \mathcal{F}_{2}\right\rangle \rightarrow_{\beta I d}\left\langle M^{\prime}, \mathcal{F}_{2}^{\prime}\right\rangle$.

Proof: 1) It sufficient to prove: $\langle M, \mathcal{F}\rangle \rightarrow_{\beta I d}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle \Longleftrightarrow \Phi^{c}(M, \mathcal{F}) \rightarrow_{\beta I} \Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$.

- $\Rightarrow)$ Let $\langle M, \mathcal{F}\rangle \rightarrow_{\beta I d}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle$. By definition $7.5, \exists p \in \mathcal{F}$ where $M \xrightarrow{p}_{\beta I} M^{\prime}$ and $\mathcal{F}^{\prime}$ is the set of $\beta I$-residuals in $M^{\prime}$ of the set of redexes $\mathcal{F}$ in $M$ relative to $p$. By definition 7.4, $\Phi^{c}(M, \mathcal{F}) \rightarrow_{\beta I}$ $\Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$.
- $\Leftarrow$ Let $\Phi^{c}(M, \mathcal{F}) \rightarrow_{\beta I} \Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$. By lemma 2.2.8, $\exists p \mathcal{R}_{\Phi^{c}(M, \mathcal{F})}^{\beta I}$ such that $\Phi^{c}(M, \mathcal{F}) \xrightarrow{p}{ }_{\beta I}$ $\Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$. Because, by lemma 7.2.1b, $\Phi^{c}(M, \mathcal{F}) \in \Lambda_{c}$, by lemma 5.8.7a and lemma 7.2.1c, $M=\left|\Phi^{c}(M, \mathcal{F})\right|^{c}{\xrightarrow{p_{0}}}_{\beta I}\left|\Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)\right|^{c}=M^{\prime}$ such that $\left|\left\langle\Phi^{c}(M, \mathcal{F}), p_{0}\right\rangle\right|^{c}=p$. By definition 7.4, $\mathcal{F}^{\prime}$ is the set of $\beta I$-residuals in $M^{\prime}$ of the set of redexes $\mathcal{F}$ in $M$ relative to $p_{0}$. By definition 7.5, $\langle M, \mathcal{F}\rangle \rightarrow_{\beta d}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle$.

2) By lemma 7.2.1b, $\Phi^{c}\left(M, \mathcal{F}_{1}\right), \Phi^{c}\left(M, \mathcal{F}_{2}\right) \in \Lambda \mathrm{I}_{c}$. By lemma 7.2.1c, $\left|\Phi^{c}\left(M, \mathcal{F}_{1}\right)\right|^{c}=\left|\Phi^{c}\left(M, \mathcal{F}_{2}\right)\right|^{c}$. By lemma 7.2.1d, $\left|\left\langle\Phi^{c}\left(M, \mathcal{F}_{1}\right), \mathcal{R}_{\Phi^{c}\left(M, \mathcal{F}_{1}\right)}^{\beta I}\right\rangle\right|^{c}=\mathcal{F}_{1} \subseteq \mathcal{F}_{2}=\left|\left\langle\Phi^{c}\left(M, \mathcal{F}_{2}\right), \mathcal{R}_{\Phi^{c}\left(M, \mathcal{F}_{2}\right)}^{\beta I}\right\rangle\right|^{c}$.

If $\left\langle M, \mathcal{F}_{1}\right\rangle \rightarrow_{\beta I d}\left\langle M^{\prime}, \mathcal{F}_{1}^{\prime}\right\rangle$ then by lemma $1, \Phi^{c}\left(M, \mathcal{F}_{1}\right) \rightarrow_{\beta I} \Phi^{c}\left(M^{\prime}, \mathcal{F}_{1}^{\prime}\right)$. By lemma 2.2.8, there exists $p_{1} \in \mathcal{R}_{\Phi^{c}\left(M, \mathcal{F}_{1}\right)}^{\beta I}$ such that $\Phi^{c}\left(M, \mathcal{F}_{1}\right) \stackrel{p}{\rightarrow}_{\beta I} \Phi^{c}\left(M^{\prime}, \mathcal{F}_{1}^{\prime}\right)$. Let $p_{0}=\mid\left\langle\left.\left\langle\mathcal{R}_{\Phi^{c}\left(M, \mathcal{F}_{1}\right)}^{\beta I}, p_{1}\right\rangle\right|^{c}\right.$, so by lemma 7.2.1d, $p_{0} \in \mathcal{F}_{1}$. By lemma 5.8.7a and lemma 7.2.1c, $M{\xrightarrow{p_{0}}}_{\beta I} M^{\prime}$.

By lemma 7.3 there exists a unique set $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta I}$, such that $\Phi^{c}\left(M, \mathcal{F}_{1}\right) \xrightarrow{p^{\prime}}{ }_{\beta I} \Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$ and $\left|\left\langle\Phi^{c}\left(M, \mathcal{F}_{1}\right), p^{\prime}\right\rangle\right|^{c}=p_{0}$. By lemma 2.2.8, $p^{\prime} \in \mathcal{R}_{\Phi^{c}\left(M, \mathcal{F}_{1}\right)}^{\beta I}$. Since $p^{\prime}, p_{1} \in \mathcal{R}_{\Phi^{c}\left(M, \mathcal{F}_{1}\right)}^{\beta I}$, by lemma 5.8.1, $p^{\prime}=p_{1}$. So, by lemma 2.2.9, $\Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)=\Phi^{c}\left(M^{\prime}, \mathcal{F}_{1}^{\prime}\right)$. By lemma 7.2.1d, $\mathcal{F}^{\prime}=\mathcal{F}_{1}^{\prime}$ and $\mathcal{F}_{1}^{\prime}=$ $\left|\left\langle\Phi^{c}\left(M^{\prime}, \mathcal{F}_{1}^{\prime}\right), \mathcal{R}_{\Phi^{c}\left(M^{\prime}, \mathcal{F}_{1}^{\prime}\right)}^{\beta I}\right\rangle\right|^{c}$.

By lemma 7.3 there exists a unique set $\mathcal{F}_{2}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta I}$, such that $\Phi^{c}\left(M, \mathcal{F}_{2}\right) \xrightarrow{p_{2}}{ }_{\beta I} \Phi^{c}\left(M^{\prime}, \mathcal{F}_{2}^{\prime}\right)$ and $\left|\left\langle\Phi^{c}\left(M, \mathcal{F}_{2}\right), p_{2}\right\rangle\right|^{c}=p_{0}$. By lemma 2.2.8, $p_{2} \in \Phi^{c}\left(M, \mathcal{F}_{2}\right)$. By lemma 7.2.1d, $\mathcal{F}_{2}^{\prime}=\left|\left\langle\Phi^{c}\left(M^{\prime}, \mathcal{F}_{2}^{\prime}\right), \mathcal{R}_{\Phi^{c}\left(M^{\prime}, \mathcal{F}_{2}^{\prime}\right)}^{\beta I}\right\rangle\right|^{c}$.

Hence, by lemma 5.8.7c, $\mathcal{F}_{1}^{\prime} \subseteq \mathcal{F}_{2}^{\prime}$ and by lemma $1,\left\langle M, \mathcal{F}_{2}\right\rangle \rightarrow_{\beta I d}\left\langle M^{\prime}, \mathcal{F}_{2}^{\prime}\right\rangle$.
The next lemma adapts the main theorem in [KS08] where as far as we know it first appeared.

## Lemma 7.7. (Confluence of the $\beta I$-developments)

Let $M \in \Lambda \mathrm{I}$, such that $c \notin \mathrm{fv}(M)$. If $\left.M \xrightarrow{\mathcal{F}_{1}} \beta I d\right) M_{1}$ and $M \xrightarrow{\mathcal{F}_{2}}{ }_{\beta I d} M_{2}$, then there exist $\mathcal{F}_{1}^{\prime} \subseteq \mathcal{R}_{M_{1}}^{\beta I}$, $\mathcal{F}_{2}^{\prime} \subseteq \mathcal{R}_{M_{2}}^{\beta I}$ and $M_{3} \in \Lambda I$ such that $M_{1}{\xrightarrow{\mathcal{F}_{1}^{\prime}}}_{\beta I d} M_{3}$ and $M_{2}{\xrightarrow{\mathcal{F}_{2}^{\prime}}}_{\beta I d} M_{3}$.

Proof: If $M{\xrightarrow{\mathcal{F}_{1}}}_{\beta I d} M_{1}$ and $M{\xrightarrow{\mathcal{F}_{2}}}_{\beta I d} M_{2}$, then there exists $\mathcal{F}_{1}^{\prime \prime}, \mathcal{F}_{2}^{\prime \prime}$ such that $\left\langle M, \mathcal{F}_{1}\right\rangle \rightarrow_{\beta I d}^{*}\left\langle M_{1}, \mathcal{F}_{1}^{\prime \prime}\right\rangle$ and $\left\langle M, \mathcal{F}_{2}\right\rangle \rightarrow_{\beta I d}^{*}\left\langle M_{2}, \mathcal{F}_{2}^{\prime \prime}\right\rangle$. By definitions 7.4 and $7.5, \mathcal{F}_{1}^{\prime \prime} \subseteq \mathcal{R}_{M_{1}}^{\beta I}$ and $\mathcal{F}_{2}^{\prime \prime} \subseteq \mathcal{R}_{M_{2}}^{\beta I}$. Note that by definition 7.5 and lemma 2.2.4, $M_{1}, M_{2} \in \Lambda$ I. By lemma 8.6.2, there exist $\mathcal{F}_{1}^{\prime \prime \prime} \subseteq \mathcal{R}_{M_{1}}^{\beta I}$ and $\mathcal{F}_{2}^{\prime \prime \prime} \subseteq$ $\mathcal{R}_{M_{2}}^{\beta I}$ such that $\left\langle M, \mathcal{F}_{1} \cup \mathcal{F}_{2}\right\rangle \rightarrow_{\beta I d}^{*}\left\langle M_{1}, \mathcal{F}_{1}^{\prime \prime} \cup \mathcal{F}_{1}^{\prime \prime \prime}\right\rangle$ and $\left\langle M, \mathcal{F}_{1} \cup \mathcal{F}_{2}\right\rangle \rightarrow_{\beta I d}^{*}\left\langle M_{2}, \mathcal{F}_{2}^{\prime \prime} \cup \mathcal{F}_{2}^{\prime \prime \prime}\right\rangle$. By lemma 7.6.1, $T \rightarrow_{\beta I}^{*} T_{1}$ and $T \rightarrow_{\beta I}^{*} T_{2}$ where $T=\Phi^{c}\left(M, \mathcal{F}_{1} \cup \mathcal{F}_{2}\right), T_{1}=\Phi^{c}\left(M_{1}, \mathcal{F}_{1}^{\prime \prime} \cup \mathcal{F}_{1}^{\prime \prime \prime}\right)$ and $T_{2}=\Phi^{c}\left(M_{2}, \mathcal{F}_{2}^{\prime \prime} \cup \mathcal{F}_{2}^{\prime \prime \prime}\right)$. Since by lemma 7.2.1b, $T \in \Lambda \mathrm{I}_{c}$ and by lemma $6.6 .1, T$ is typable in the type
system $\mathcal{D}_{I}$, so $T \in \mathrm{CR}^{\beta I}$ by corollary 6.5 . So, by lemma 2.2 b , there exists $T_{3} \in \Lambda \mathrm{I}_{c}$, such that $T_{1} \rightarrow_{\beta I}^{*}$ $T_{3}$ and $T_{2} \rightarrow_{\beta I}^{*} T_{3}$. Let $\mathcal{F}_{3}=\left|\left\langle T_{3}, \mathcal{R}_{T_{3}}^{\beta I}\right\rangle\right|^{c}$ and $M_{3}=\left|T_{3}\right|^{\beta I}$, then by lemma 7.2.2b, $T_{3}=\Phi^{c}\left(M_{3}, \mathcal{F}_{3}\right)$. Hence, by lemma 7.6.1, $\left\langle M_{1}, \mathcal{F}_{1}^{\prime \prime} \cup \mathcal{F}_{1}^{\prime \prime \prime}\right\rangle \rightarrow_{\beta I d}^{*}\left\langle M_{3}, \mathcal{F}_{3}\right\rangle$ and $\left\langle M_{2}, \mathcal{F}_{2}^{\prime \prime} \cup \mathcal{F}_{2}^{\prime \prime \prime}\right\rangle \rightarrow_{\beta I d}^{*}\left\langle M_{3}, \mathcal{F}_{3}\right\rangle$, i.e. $M_{1} \xrightarrow{\mathcal{F}_{1}^{\prime \prime} \cup \mathcal{F}_{1}^{\prime \prime \prime}}{ }_{\beta I d} M_{3}$ and $M_{2} \xrightarrow{\mathcal{F}_{2}^{\prime \prime} \cup \mathcal{F}_{2}^{\prime \prime \prime}} \beta I d M_{3}$.

We follow [Bar84] and [KS08] and define the following reduction relation:
Definition 7.8. Let $M, M^{\prime} \in \Lambda \mathrm{I}$, such that $c \notin \mathrm{fv}(M)$. We define the following one step reduction: $M \rightarrow_{1 I} M^{\prime} \Longleftrightarrow \exists \mathcal{F}, \mathcal{F}^{\prime},(M, \mathcal{F}) \rightarrow_{\beta I d}^{*}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$.

Before establishing the main result of this section we need the following lemma that, among other things, relates $\beta I$-developments to $\beta I$-reductions (lemma 7.9.5).

Lemma 7.9. 1. Let $c \notin \mathrm{fv}(M)$. Then, $\mathcal{R}_{\Phi^{c}(M, \varnothing)}^{\beta I}=\varnothing$.
2. Let $c \notin \operatorname{fv}(M N)$ and $x \neq c$. Then, $\mathcal{R}_{\Phi^{c}(M, \varnothing)\left[x:=\Phi^{c}(N, \varnothing)\right]}^{\beta I}=\varnothing$.
3. Let $c \notin \operatorname{fv}(M)$. If $p \in \mathcal{R}_{M}^{\beta I}$ and $\Phi^{c}(M,\{p\}) \rightarrow_{\beta I} M^{\prime}$ then $\mathcal{R}_{M^{\prime}}^{\beta I}=\varnothing$.
4. Let $M \in \Lambda \mathrm{I}$ such that $c \notin \mathrm{fv}(M)$. If $M \xrightarrow{p}{ }_{\beta I} M^{\prime}$ then $\langle M,\{p\}\rangle \rightarrow_{\beta I d}\left\langle M^{\prime}, \varnothing\right\rangle$.
5. $\rightarrow_{\beta I}^{*}=\rightarrow_{1 I}^{*}$.

Proof: 1), 2) and 3) By induction on the structure of $M$.
4) By lemma 2.2.8, $p \in \mathcal{R}_{M}^{\beta I}$. By lemma 7.3 , there is a unique set $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta I}$, such that $\Phi^{c}(M,\{p\}) \rightarrow_{\beta I}$ $\Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$. By lemma 7.9.3, $\mathcal{R}_{\Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)}^{\beta I}=\varnothing$, so $\left|\left\langle\Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right), \mathcal{R}_{\Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)}^{\beta I}\right\rangle\right|^{c}=\varnothing$ and $\mathcal{F}^{\prime}=\varnothing$ by lemma 7.2.1d. Finally, by lemma 7.6.1, $\langle M,\{p\}\rangle \rightarrow_{\beta I d}\left\langle M^{\prime}, \varnothing\right\rangle$.
5) It is obvious that $\rightarrow_{1 I}^{*} \subseteq \rightarrow_{\beta I}^{*}$. We prove $\rightarrow_{\beta I}^{*} \subseteq \rightarrow_{1 I}^{*}$ by induction on the length of $M \rightarrow{ }_{\beta I}^{*} M^{\prime}$.

Finally, we achieve what we started to do: the confluence of $\beta I$-reduction on $\Lambda \mathrm{I}$.
Lemma 7.10. $\Lambda \mathrm{I} \subseteq \mathrm{CR}^{\beta I}$.
Proof: Let $M \in \Lambda \mathrm{I}$ and $c$ be a variable such that $c \notin \operatorname{fv}(M)$. Let $M \rightarrow_{\beta I}^{*} M_{1}$ and $M \rightarrow_{\beta I}^{*} M_{2}$. By lemma 5, $M \rightarrow{ }_{1 I}^{*} M_{1}$ and $M \rightarrow{ }_{1 I}^{*} M_{2}$. We prove the statement by induction on the length of $M \rightarrow{ }_{1 I}^{*} M_{1}$.

## 8. Generalising Koletsos and Stavrinos's method [KS08] to $\beta \eta$-developments

In this section, we generalise the method of [KS08] to handle $\beta \eta$-reduction. This generalisation is not trivial since we needed to define developments involving $\eta$-reduction and to establish the important result of the closure under $\eta$-reduction of a defined set of frozen terms. These were the main reasons that led us to extend the various definitions related to developments. For example, clause (R4) of the definition of $\Lambda \eta_{c}$ in definition 5.1 aims to ensure closure under $\eta$-reduction. The definition of $\Lambda_{c}$ in [Kri90] excluded
such a rule and hence we lose closure under $\eta$-reduction as can be seen by the following example: Let $M=\lambda x . c N x \in \Lambda_{c}$ where $x \notin \operatorname{fv}(N)$ and $N \in \Lambda_{c}$, then $M \rightarrow_{\eta} c N \notin \Lambda_{c}$.

First, we formalise $\beta \eta$-residuals and $\beta \eta$-developments in section 8.1. Then, we compare our notion of $\beta \eta$-residuals with those of Curry and Feys [CF58] and Klop [Klo80] in section 8.2, establishing that we allow less residuals than Klop but we believe more residuals than Curry and Feys. Finally, we establish in section 8.3 the confluence of $\beta \eta$-developments and hence of $\beta \eta$-reduction.

### 8.1. Formalising $\beta \eta$-developments

The next definition adapts definition 7.1 to deal with $\beta \eta$-reduction. The variable $c$ is used to 1 ) freeze the $\beta \eta$-redexes of $M$ which are not in the set $\mathcal{F}$ of $\beta \eta$-redex occurrences in $M ; 2$ ) neutralise applications so that they cannot be transformed into redexes after $\beta \eta$-reduction; and 3 ) neutralise bound variables so $\lambda$-abstraction cannot be transformed into redexes after $\beta \eta$-reduction. For example, in $\lambda x . y(c(c x))$ $(x \neq y), c$ is used to freeze the $\eta$-redex $\lambda x . y x$.

Definition 8.1. $\left(\Psi^{c}(-,-), \Psi_{0}^{c}(-,-)\right)$
Let $c \notin \operatorname{fv}(M)$ and $\mathcal{F} \subseteq \mathcal{R}_{M}^{\beta \eta}$.
(P1) If $M \in \mathcal{V} \backslash\{c\}$ and $\mathcal{F}=$ lem. $5.3 \varnothing$ then:

$$
\Psi^{c}(M, \mathcal{F})=\left\{c^{n}(M) \mid n>0\right\} \quad \Psi_{0}^{c}(M, \mathcal{F})=\{M\}
$$

(P2) If $M=\lambda x . N, x \neq c$, and $\mathcal{F}^{\prime}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq^{\text {lem. } 5.3} \mathcal{R}_{N}^{\beta \eta}$ then:

$$
\begin{gathered}
\Psi^{c}(M, \mathcal{F})= \begin{cases}\left\{c^{n}\left(\lambda x . N^{\prime}[x:=c(c x)]\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi^{c}\left(N, \mathcal{F}^{\prime}\right)\right\} & \text { if } 0 \notin \mathcal{F} \\
\left\{c^{n}\left(\lambda x . N^{\prime}\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}^{\prime}\right)\right\} & \text { otherwise }\end{cases} \\
\Psi_{0}^{c}(M, \mathcal{F})= \begin{cases}\left\{\lambda x . N^{\prime}[x:=c(c x)] \mid N^{\prime} \in \Psi^{c}\left(N, \mathcal{F}^{\prime}\right)\right\} & \text { if } 0 \notin \mathcal{F} \\
\left\{\lambda x \cdot N^{\prime} \mid N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}^{\prime}\right)\right\} & \text { otherwise }\end{cases}
\end{gathered}
$$

(P3) If $M=N P, \mathcal{F}_{1}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq^{\text {lem. } 5.3} \mathcal{R}_{N}^{\beta \eta}$, and $\mathcal{F}_{2}=\{p \mid 2 . p \in \mathcal{F}\} \subseteq^{\text {lem. } 5.3} \mathcal{R}_{P}^{\beta \eta}$ then:

$$
\begin{gathered}
\Psi^{c}(M, \mathcal{F})= \begin{cases}\left\{c^{n}\left(c N^{\prime} P^{\prime}\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi^{c}\left(N, \mathcal{F}_{1}\right) \wedge P^{\prime} \in \Psi^{c}\left(P, \mathcal{F}_{2}\right)\right\} & \text { if } 0 \notin \mathcal{F} \\
\left\{c^{n}\left(N^{\prime} P^{\prime}\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}_{1}\right) \wedge P^{\prime} \in \Psi^{c}\left(P, \mathcal{F}_{2}\right)\right\} & \text { otherwise }\end{cases} \\
\Psi_{0}^{c}(M, \mathcal{F})= \begin{cases}\left\{c N^{\prime} P^{\prime} \mid N^{\prime} \in \Psi^{c}\left(N, \mathcal{F}_{1}\right) \wedge P^{\prime} \in \Psi_{0}^{c}\left(P, \mathcal{F}_{2}\right)\right\} & \text { if } 0 \notin \mathcal{F} \\
\left\{N^{\prime} P^{\prime} \mid N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}_{1}\right) \wedge P^{\prime} \in \Psi_{0}^{c}\left(P, \mathcal{F}_{2}\right)\right. & \text { otherwise }\end{cases}
\end{gathered}
$$

The next lemma is needed to define $\beta \eta$-developments and relates the freezing and erasure operations.
Lemma 8.2. 1. Let $c \notin \operatorname{fv}(M)$ and $\mathcal{F} \subseteq \mathcal{R}_{M}^{\beta \eta}$. We have:
(a) $\Psi_{0}^{c}(M, \mathcal{F}) \subseteq \Psi^{c}(M, \mathcal{F})$.
(b) $\forall N \in \Psi^{c}(M, \mathcal{F}) \cdot \mathrm{fv}(M)=\mathrm{fv}(N) \backslash\{c\}$.
(c) $\Psi^{c}(M, \mathcal{F}) \subseteq \Lambda \eta_{c}$.
(d) Let $M=N x$ where $x \notin \operatorname{fv}(N) \cup\{c\}$ and $P \in \Psi_{0}^{c}(M, \mathcal{F})$. Then, $\mathcal{R}_{\lambda x . P}^{\beta \eta}=\{0\} \cup\{1 . p \mid$ $\left.p \in \mathcal{R}_{P}^{\beta \eta}\right\}$.
(e) Let $M=N x$. If $P x \in \Psi^{c}(N x, \mathcal{F})$ then $P x \in \Psi_{0}^{c}(N x, \mathcal{F})$.
(f) $\forall N \in \Psi^{c}(M, \mathcal{F}) . \forall n \geq 0 . c^{n}(N) \in \Psi^{c}(M, \mathcal{F})$.
(g) $\forall N \in \Psi^{c}(M, \mathcal{F}) \cdot|N|^{c}=M$.
(h) $\forall N \in \Psi^{c}(M, \mathcal{F}) . \mathcal{F}=\left|\left\langle N, \mathcal{R}_{N}^{\beta \eta}\right\rangle\right|^{c}$.
2. Let $M \in \Lambda \eta_{c}$. We have:
(a) $\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c} \subseteq \mathcal{R}_{|M|^{c}}^{\beta \eta}$ and $M \in \Psi^{c}\left(|M|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right)$.
(b) $\left.\left.\langle | M\right|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right\rangle$ is the unique $\langle N, \mathcal{F}\rangle$ where $c \notin \operatorname{fv}(N), \mathcal{F} \subseteq \mathcal{R}_{N}^{\beta \eta}$ and $M \in \Psi^{c}(N, \mathcal{F})$.
3. Let $M \in \Lambda$, where $c \notin \operatorname{fv}(M), \mathcal{F} \subseteq \mathcal{R}_{M}^{\beta \eta}, p \in \mathcal{F}$ and $M \xrightarrow{p}{ }_{\beta \eta} M^{\prime}$. Then, $\exists$ a unique $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta \eta}$ where $\forall N \in \Psi^{c}(M, \mathcal{F})$ there are $N^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$ and $p^{\prime} \in \mathcal{R}_{N}^{\beta \eta}$ such that $N{\xrightarrow{p^{\prime}}}_{\beta \eta} N^{\prime}$ and $\left|\left\langle N, p^{\prime}\right\rangle\right|^{c}=p$.

Proof: 1a), 1b.), 1c), 1g) and 1h) By induction on the structure of $M$.
1d) and 1e) By case on the belonging of 0 in $\mathcal{F}$.
1f) By case on the structure of $M$ and induction on $n$.
2a) By induction on the construction of $M$.
2b) By lemmas 5.8.4 and 8.2.2a, $c \notin \operatorname{fv}\left(|M|^{c}\right),\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c} \subseteq \mathcal{R}_{|M|^{c}}^{\beta \eta}$ and $M \in \Psi^{c}\left(|M|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right)$. If $\left\langle N^{\prime}, \mathcal{F}^{\prime}\right\rangle$ is another such pair then $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{N^{\prime}}^{\beta \eta}$ and $M \in \Psi^{c}\left(N^{\prime}, \mathcal{F}^{\prime}\right)$ and by lemmas 8.2 .1 g and 8.2.1h, $|M|^{c}=N^{\prime}$ and $\mathcal{F}^{\prime}=\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}$.

Definition 8.3. ( $\beta \eta$-development)

1. Let $M \in \Lambda, \mathcal{F} \subseteq \mathcal{R}_{M}^{\beta \eta}, p \in \mathcal{F}$ and $M \xrightarrow{p}_{\beta \eta} M^{\prime}$. By lemma 8.2.3, $\exists$ a unique $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta \eta}$, such that $\forall N \in \Psi^{c}(M, \mathcal{F})$, there are $N^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$ and $p^{\prime} \in \mathcal{R}_{N}^{\beta \eta}$ where $N \xrightarrow{p^{\prime}} \beta \eta N^{\prime}$ and $\left|\left\langle N, p^{\prime}\right\rangle\right|^{c}=p$. We call $\mathcal{F}^{\prime}$ the set of $\beta \eta$-residuals in $M^{\prime}$ of the set of $\beta \eta$-redexes $\mathcal{F}$ in $M$ relative to $p$.
2. Let $M \in \Lambda$, where $c \notin \operatorname{fv}(M)$, and $\mathcal{F} \subseteq \mathcal{R}_{M}^{\beta \eta}$. A one-step $\beta \eta$-development of $\langle M, \mathcal{F}\rangle$, denoted $\langle M, \mathcal{F}\rangle \rightarrow_{\beta \eta d}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle$, is a $\beta \eta$-reduction $M \xrightarrow{p}{ }_{\beta \eta} M^{\prime}$ where $p \in \mathcal{F}$ and $\mathcal{F}^{\prime}$ is the set of $\beta \eta$-residuals in $M^{\prime}$ of the set of $\beta \eta$-redexes $\mathcal{F}$ in $M$ relative to $p$. A $\beta \eta$-development is the transitive closure of a one-step $\beta \eta$-development. We write $M \xrightarrow{\mathcal{F}} \beta \eta d M^{\prime}$ for the $\beta \eta$-development $\langle M, \mathcal{F}\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle$.

### 8.2. Comparison with Curry and Feys [CF58] and Klop [Klo80]

A common definition of a $\beta \eta$-residual is given by Curry and Feys [CF58] (p. 117, 118). Another definition of $\beta \eta$-residual (called $\lambda$-residual) is presented by Klop [Klo80] (definition 2.4, p. 254). Klop shows that these definitions allow one to prove different properties of developments. Following the definition of a $\beta \eta$-residual given by Curry and Feys [CF58] (and as pointed out in [CF58, Klo80, BBKV76]), if the $\eta$-redex $\lambda x$. $(\lambda y \cdot M) x$, where $x \notin \mathrm{fv}(\lambda y \cdot M)$, is reduced in the term $P=(\lambda x \cdot(\lambda y \cdot M) x) N$ to give the term $Q=(\lambda y \cdot M) N$, then $Q$ is not a $\beta \eta$-residual of $P$ in $P$ (note that following the definition of a $\lambda$-residual given by [Klo80], $Q$ is a $\lambda$-residual of the redex $(\lambda y \cdot M) x$ in $P$ since the $\lambda$ of the redex $Q$ is the same as the $\lambda$ of the redex $(\lambda y . M) x$ in $P$ ). Moreover, if the $\beta$-redex $(\lambda y . M y) x$, where $y \notin \mathrm{fv}(M)$, is reduced in the term $P=\lambda x$. $(\lambda y \cdot M y) x$ to give the term $Q=\lambda x \cdot M x$, then $Q$ is not a $\beta \eta$-residual of $P$ in $P$ (note that following the definition of a $\lambda$-residual given by [Klo80], $Q$ is a $\lambda$-residual of the redex $P$ in $P$ since the $\lambda$ of the redex $Q$ is the same as the $\lambda$ of the redex $P$ in $P$ ). Our definition 8.3.1 differs from the common one stated by Curry and Feys [CF58] by the cases illustrated in the following example: $\Psi^{c}((\lambda x .(\lambda y \cdot M) x) N,\{0,1.0,1.1 .0\})=\left\{c^{n}((\lambda x .(\lambda y . P[y:=c(c y)]) x) Q) \mid n \geq 0 \wedge P \in\right.$ $\left.\Psi^{c}(M, \varnothing) \wedge Q \in \Psi^{c}(N, \varnothing)\right\}$, where $x \notin \mathrm{fv}(\lambda y \cdot M)$. Let $p=1.0$ then $(\lambda x \cdot(\lambda y \cdot M) x) N \xrightarrow{p}_{\beta \eta}(\lambda y \cdot M) N$. Moreover, $P_{0}=c^{n}((\lambda x .(\lambda y \cdot P[y:=c(c y)]) x) Q) \xrightarrow{p^{\prime}} \beta \eta c^{n}((\lambda y \cdot P[y:=c(c y)]) Q)$ such that $n \geq 0$, $P \in \Psi^{c}(M, \varnothing), Q \in \Psi^{c}(N, \varnothing)$, and $\left|\left\langle P_{0}, p^{\prime}\right\rangle\right|^{c}=\left|\left\langle P_{0}, 2^{n} .1 .0\right\rangle\right|^{c}=p$, and $c^{n}((\lambda y . P[y:=c(c y)]) Q) \in$ $\Psi^{c}((\lambda y \cdot M) N,\{0\})$.

Let us now compare our definition of $\beta \eta$-residuals to the $\lambda$-residuals given by Klop [Klo80]. We believe that we accept more redexes as residuals of a set of redexes than Curry and Feys [CF58] (as shown by the examples of this section) and less than Klop.

We introduce the two calculi $\bar{\Lambda}$ and $\bar{\Lambda} \eta_{c}$ which are labelled versions of the calculi $\Lambda$ and $\Lambda \eta_{c}$ :

$$
\begin{array}{lllll}
t & \in & \bar{\Lambda} & ::= & x\left|\lambda_{n} x . t\right| t_{1} t_{2} \\
v & \in & \mathrm{ABS}_{c} & ::= & \lambda_{n} \bar{x} \cdot w \bar{x} \mid \lambda_{n} \bar{x} \cdot u[\bar{x}:=c(c \bar{x})], \text { where } \bar{x} \notin \operatorname{fv}(w) \\
w & \in & \mathrm{APP}_{c} & ::= & v \mid c u \\
u & \in & \bar{\Lambda}_{c} & ::= & \bar{x}|v| w u \mid c u
\end{array}
$$

where $\bar{x}, \bar{y} \in \mathcal{V} \backslash\{c\}$. Note that $\mathrm{ABS}_{c} \subseteq \mathrm{APP}_{c} \subseteq \Lambda_{\bar{\eta}} \subseteq \bar{\Lambda}$.
The labels enable to distinguish two different occurrences of a $\lambda$.
Since these two calculi are only labelled versions of $\Lambda$ and $\Lambda \eta_{c}$, let us assume in this section that the work done so far holds when $\Lambda$ ans $\Lambda \eta_{c}$ are replaced by $\bar{\Lambda}$ and $\Lambda_{\bar{\eta}}^{c}$.

Klop [Klo80] defines his $\lambda$-residuals as follows:
"Let $\mathcal{R}=M_{0} \rightarrow M_{1} \rightarrow \ldots \rightarrow M_{k} \rightarrow \ldots$ be a $\beta \eta$-reduction, $R_{0}$ a redex in $M_{0}$ and $R_{k}$ a redex in $M_{k}$ such that the head- $\lambda$ of $R_{k}$ descends from that of $R_{0}$.
Regardless whether $R_{0}, R_{k}$ are $\beta$ - or $\eta$-redexes, $R_{k}$ is called a $\lambda$-residual of $R_{0}$ via $\mathcal{R}$."
We define the head- $\lambda$ of a $\beta \eta$-redex by: headlam $\left(\left(\lambda_{n} x . t_{1}\right) t_{2}\right)=\langle 1, n\rangle$ and headlam $\left(\lambda_{n} x . t_{0} x\right)=$ $\langle 2, n\rangle$, if $x \notin \operatorname{fv}\left(t_{0}\right)$. If $\mathcal{F} \subseteq \mathcal{R}_{t}^{\beta \eta}$ we define headlamred $(t, \mathcal{F})$ to be $\left\{\langle i, n\rangle \mid \exists p \in \mathcal{F}\right.$. headlam $\left(\left.t\right|_{p}\right)=$ $\langle i, n\rangle\}$. We define $\operatorname{hlr}(t)$ to be headlamred $\left(t, \mathcal{R}_{t}^{\beta \eta}\right)$.

The following lemma states the equality between the head- $\lambda$ 's of a set $\mathcal{F}$ of $\beta \eta$-redexes of a term $t$ and the head- $\lambda$ 's of the $\beta \eta$-redexes of any term $u$ in the application of the function $\Psi^{c}$ to $t$ and $\mathcal{F}$ :

Lemma 8.4. Let $c \notin \operatorname{fv}(t)$ and $\mathcal{F} \subseteq \mathcal{R}_{t}^{\beta \eta}$. If $u \in \Psi^{c}(t, \mathcal{F})$ then $\operatorname{hlr}(u)=\operatorname{headlamred}(t, \mathcal{F})$.

Proof: By induction on the structure of $t$.
The following lemma states that if a term $u_{1}$ in $\Lambda \eta_{c}$ reduces to a term $u^{\prime}$ then the set of head- $\lambda$ 's of the $\beta \eta$-redexes of $u^{\prime}$ is included in the set of head $-\lambda$ 's of the $\beta \eta$-redexes of $u_{1}$.

Lemma 8.5. If $u_{1} \in \Lambda^{-} \bar{\eta}_{c}$ and $u_{1} \xrightarrow{p}_{\beta \eta} u^{\prime}$ then $\operatorname{hlr}\left(u^{\prime}\right) \subseteq \operatorname{hlr}\left(u_{1}\right)$.
Proof: By induction on the size of $u_{1}$ and then by case on the structure of $u_{1}$.
Let us now prove that, following our definition, the set of head- $\lambda$ 's of the $\beta \eta$-residuals of a set of $\beta \eta$-redexes in a term is included in the set of head- $\lambda$ 's of the considered set of $\beta \eta$-redexes.

Let $c \notin \operatorname{fv}(t), \mathcal{F} \subseteq \mathcal{R}_{t}^{\beta \eta}$ and $t \xrightarrow{p}_{\beta \eta} t^{\prime}$ then by definition 8.3.1, there exists a unique $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{t^{\prime}}^{\beta \eta}$, such that for all $u \in \Psi^{c}(t, \mathcal{F})$ (by lemma 8.2.1c, $u \in \Lambda_{\bar{\eta}}^{c}$ ), there exist $u^{\prime} \in \Psi^{c}\left(t^{\prime}, \mathcal{F}^{\prime}\right)$ and $p^{\prime} \in \mathcal{R}_{u}^{\beta \eta}$ such that $u \xrightarrow{p^{\prime}} \beta \eta u^{\prime}$ and $\left|\left\langle u, p^{\prime}\right\rangle\right|^{c}=p$. The set $\mathcal{F}^{\prime}$ is the set of $\beta \eta$-residuals in $t^{\prime}$ of the set of redexes $\mathcal{F}$ in $t$ relative to $p$. By lemma 2.2.3, $c \notin \mathrm{fv}\left(t^{\prime}\right)$. By definition $\Psi^{c}(t, \mathcal{F})$ is not empty. Let $u \in \Psi^{c}(t, \mathcal{F})$ then there exist $u^{\prime} \in \Psi^{c}\left(t^{\prime}, \mathcal{F}^{\prime}\right)$ and $p^{\prime} \in \mathcal{R}_{u}^{\beta \eta}$ such that $u \xrightarrow{p^{\prime}}{ }_{\beta \eta} u^{\prime}$ and $\left|\left\langle u, p^{\prime}\right\rangle\right|^{c}=p$. By lemma 8.5, $\operatorname{hlr}\left(u^{\prime}\right) \subseteq \operatorname{hlr}(u)$. So, by lemma 8.4, headlamred $\left(t^{\prime}, \mathcal{F}^{\prime}\right) \subseteq$ headlamred $(t, \mathcal{F})$.

However, this is not enough to match Klop's definition of $\lambda$-residuals. As a matter of fact, as we show below, we can find $t$ and $\mathcal{F}$ such that, following Klop's definition, $p_{0} \in \mathcal{R}_{t^{\prime}}^{\beta \eta}$ and $p_{0}$ is a $\lambda$ residual of $\mathcal{F}$ via $p$ but $p_{0} \notin \mathcal{F}^{\prime}$. Let $t=\left(\lambda_{0} x . x y\right)\left(\lambda_{1} z . y z\right) \xrightarrow{0}_{\beta \eta}\left(\lambda_{1} z . y z\right) y=t^{\prime}$ and let $\mathcal{F}=$ $\{0,2.0\}$. Then $\Psi^{c}(t, \mathcal{F})=\left\{c^{n_{1}}\left(\left(\lambda_{0} x . c^{n_{2}}\left(c^{3}(x) y\right)\right)\left(c^{n_{3}}\left(\lambda_{1} z . c^{n_{4}+1}(y) z\right)\right)\right) \mid n_{1}, n_{2}, n_{3}, n_{4} \geq 0\right\}$. Let $u \in \Psi^{c}(t, \mathcal{F})$, then $u=c^{n_{1}}\left(\left(\lambda_{0} x . c^{n_{2}}\left(c^{3}(x) y\right)\right)\left(c^{n_{3}}\left(\lambda_{1} z . c^{n_{4}+1}(y) z\right)\right)\right)$ such that $n_{1}, n_{2}, n_{3}, n_{4} \geq 0$. We obtain $u=c^{n_{1}}\left(\left(\lambda_{0} x . c^{n_{2}}\left(c^{3}(x) y\right)\right)\left(c^{n_{3}}\left(\lambda_{1} z . c^{n_{4}+1}(y) z\right)\right)\right) \xrightarrow{p_{0}}{ }_{\beta \eta} c^{n_{1}+n_{2}}\left(c^{n_{3}+3}\left(\lambda_{1} z . c^{n_{4}+1}(y) z\right) y\right)=u^{\prime}$ such that $p_{0}=2^{n_{1}} .0$. Then $\mathcal{F}^{\prime}=\{1.0\}$ is the set of $\beta \eta$-residuals in $t^{\prime}$ of the set of redexes $\mathcal{F}$ in $t$ relative to $p$. But 0 is a $\lambda$-residual of $\mathcal{F}$ via 0 and $0 \notin \mathcal{F}^{\prime}$.

It turns out that, though our $\beta \eta$-residuals are $\lambda$-residuals, the opposite does not hold. For example: $t=\lambda_{n} \bar{x} \cdot\left(\lambda_{m} \bar{y} \cdot z \bar{y}\right) \stackrel{x}{\rightarrow}{ }_{\beta}^{1.0} \lambda_{n} \bar{x} \cdot z \bar{x}=t^{\prime}$ and $0 \in \mathcal{R}_{t^{\prime}}^{\beta \eta}$, but $u=\lambda_{n} \bar{x} .\left(\lambda_{m} \bar{y} \cdot c z(c(c \bar{y}))\right) \bar{x} \in \Psi^{c}(t,\{0,1.0\})$ and $u=\lambda_{n} \bar{x} .\left(\lambda_{m} \bar{y} \cdot c z(c(c \bar{y}))\right) \bar{x} \xrightarrow{1.0}{ }_{\beta \eta} \lambda_{n} \bar{x} . c z(c(c \bar{x}))=u^{\prime}$ and $0 \notin \mathcal{R}_{u^{\prime}}^{\beta \eta}$.

### 8.3. Confluence of $\beta \eta$-developments and hence of $\beta \eta$-reduction

The next lemma relates $\beta \eta$-reductions of frozen terms to $\beta \eta$-developments, and states that given a $\beta \eta$ development, one can always define a new development that allows at least the same reductions.

Lemma 8.6. 1. Let $M \in \Lambda$, where $c \notin \mathrm{fv}(M)$, and $\mathcal{F} \subseteq \mathcal{R}_{M}^{\beta \eta}$. Then:

$$
\langle M, \mathcal{F}\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle \Longleftrightarrow \exists N \in \Psi^{c}(M, \mathcal{F}) . \exists N^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right) . N \rightarrow_{\beta \eta}^{*} N^{\prime}
$$

2. Let $M \in \Lambda$, such that $c \notin \operatorname{fv}(M)$ and $\mathcal{F}_{1} \subseteq \mathcal{F}_{2} \subseteq \mathcal{R}_{M}^{\beta \eta}$. If $\left\langle M, \mathcal{F}_{1}\right\rangle \rightarrow_{\beta \eta d}\left\langle M^{\prime}, \mathcal{F}_{1}^{\prime}\right\rangle$ then there exists $\mathcal{F}_{2}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta \eta}$ such that $\mathcal{F}_{1}^{\prime} \subseteq \mathcal{F}_{2}^{\prime}$ and $\left\langle M, \mathcal{F}_{2}\right\rangle \rightarrow_{\beta \eta d}\left\langle M^{\prime}, \mathcal{F}_{2}^{\prime}\right\rangle$.

Proof: 1) Note that $\Psi^{c}(M, \mathcal{F}) \neq \varnothing$. Then, it is sufficient to prove:

- $\langle M, \mathcal{F}\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle \Rightarrow \forall N \in \Psi^{c}(M, \mathcal{F}) . \exists N^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right) . N \rightarrow_{\beta \eta}^{*} N^{\prime}$ by induction on the reduction $\langle M, \mathcal{F}\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle$.
- $\exists N \in \Psi^{c}(M, \mathcal{F}) . \exists N^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right) . N \rightarrow_{\beta \eta}^{*} N^{\prime} \Rightarrow\langle M, \mathcal{F}\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle$ by induction on the reduction $N \rightarrow{ }_{\beta \eta}^{*} N^{\prime}$ such that $N \in \Psi^{c}(M, \mathcal{F})$ and $N^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$.

2) By lemma 8.2.1c, $\Psi^{c}\left(M, \mathcal{F}_{1}\right), \Psi^{c}\left(M, \mathcal{F}_{2}\right) \subseteq \Lambda \eta_{c}$. For all $N_{1} \in \Psi^{c}\left(M, \mathcal{F}_{1}\right)$ and $N_{2} \in \Psi^{c}\left(M, \mathcal{F}_{2}\right)$, by lemma 8.2.1g, $\left|N_{1}\right|^{c}=\left|N_{2}\right|^{c}$ and by lemma 8.2.1h, $\left|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{\beta \eta}\right\rangle\right|^{c}=\mathcal{F}_{1} \subseteq \mathcal{F}_{2}=\left|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{\beta \eta}\right\rangle\right|^{c}$.

If $\left\langle M, \mathcal{F}_{1}\right\rangle \rightarrow_{\beta \eta d}\left\langle M^{\prime}, \mathcal{F}_{1}^{\prime}\right\rangle$ then by 1$)$, there exist $N_{1} \in \Psi^{c}\left(M, \mathcal{F}_{1}\right)$ and $N_{1}^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}_{1}^{\prime}\right)$ such that $N_{1} \rightarrow_{\beta \eta} N_{1}^{\prime}$. By definition, there exists $p_{1}$ such that $N_{1}{ }^{p_{1}}{ }_{\beta \eta} N_{1}^{\prime}$, and by lemma 2.2.8, $p_{1} \in \mathcal{R}_{N_{1}}^{\beta \eta}$. Let $p_{0}=\left|\left\langle N_{1}, p_{1}\right\rangle\right|^{c}$, so by lemma 8.2.1h, $p_{0} \in \mathcal{F}_{1}$. By lemma 5.8.7a and lemma 8.2.1g, $M \xrightarrow{p_{0}}{ }_{\beta \eta} M^{\prime}$.

By lemma 8.2.3 there exists a unique set $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta \eta}$ such that for all $P_{1} \in \Psi^{c}\left(M, \mathcal{F}_{1}\right)$ there exist $P_{1}^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$ and $p^{\prime} \in \mathcal{R}_{P_{1}}^{\beta \eta}$ such that $P_{1}{\xrightarrow{p^{\prime}}}_{\beta \eta} P_{1}^{\prime}$ and $\left|\left\langle P_{1}, p^{\prime}\right\rangle\right|^{c}=p_{0}$.

Because, $N_{1} \in \Psi^{c}\left(M, \mathcal{F}_{1}\right)$, there exist $P_{1}^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$ and $p^{\prime} \in \mathcal{R}_{N_{1}}^{\beta \eta}$ such that $N_{1}{\xrightarrow{p^{\prime}}}_{\beta \eta} P_{1}^{\prime}$ and $\left|\left\langle N_{1}, p^{\prime}\right\rangle\right|^{c}=p_{0}$. Since $p^{\prime}, p_{1} \in \mathcal{R}_{N_{1}}^{\beta \eta}$, by lemma 1, $p^{\prime}=p_{1}$, so by lemma 2.2.9, $P_{1}^{\prime}=N_{1}^{\prime}$. By lemma 8.2.1h, $\mathcal{F}^{\prime}=\left|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}=\mathcal{F}_{1}^{\prime}$.

By lemma 8.2.3 there exists a unique set $\mathcal{F}_{2}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta \eta}$, such that for all $P_{2} \in \Psi^{c}\left(M, \mathcal{F}_{2}\right)$ there exist $P_{2}^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}_{2}^{\prime}\right)$ and $p_{2} \in \mathcal{R}_{P_{2}}^{\beta \eta}$ such that $P_{2}{\xrightarrow{p_{2}}}_{\beta \eta} P_{2}^{\prime}$ and $\left|\left\langle P_{2}, p_{2}\right\rangle\right|^{c}=p_{0}$.

Since $\Psi^{c}\left(M, \mathcal{F}_{2}\right) \neq \varnothing$, let $N_{2} \in \Psi^{c}\left(M, \mathcal{F}_{2}\right)$. So, there exist $N_{2}^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}_{2}^{\prime}\right)$ and $p_{2} \in \mathcal{R}_{N_{2}}^{\beta \eta}$ such that $N_{2} \xrightarrow{p_{2}} \beta_{\eta} N_{2}^{\prime}$ and $\left|\left\langle N_{2}, p_{2}\right\rangle\right|^{c}=p_{0}$. By lemma 8.2.1h, $\mathcal{F}_{2}^{\prime}=\left|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$.

Hence, by lemma 5.8.7c, $\mathcal{F}_{1}^{\prime} \subseteq \mathcal{F}_{2}^{\prime}$ and by lemma 8.6.1, $\left\langle M, \mathcal{F}_{2}\right\rangle \rightarrow_{\beta \eta d}^{2}\left\langle M^{\prime}, \mathcal{F}_{2}^{\prime}\right\rangle$.

## Lemma 8.7. (Confluence of the $\beta \eta$-developments)

Let $M \in \Lambda$ such that $c \notin \operatorname{fv}(M)$. If $M{\xrightarrow{\mathcal{F}_{1}}}_{\beta \eta d} M_{1}$ and $M{\xrightarrow{\mathcal{F}_{2}}}_{\beta \eta d} M_{2}$, then there exist $\mathcal{F}_{1}^{\prime} \subseteq \mathcal{R}_{M_{1}}^{\beta \eta}$, $\mathcal{F}_{2}^{\prime} \subseteq \mathcal{R}_{M_{2}}^{\beta \eta}$ and $M_{3} \in \Lambda$ such that $M_{1}{\xrightarrow{\mathcal{F}_{1}^{\prime}}}_{\beta \eta d} M_{3}$ and $M_{2} \xrightarrow{\mathcal{F}}_{\beta \eta d}^{\prime} M_{3}$.

Proof: If $M{\xrightarrow{\mathcal{F}_{1}}}_{\beta \eta d} M_{1}$ and $M{\xrightarrow{\mathcal{F}_{2}}}_{\beta \eta d} M_{2}$, then there exist $\mathcal{F}_{1}^{\prime \prime}, \mathcal{F}_{2}^{\prime \prime}$ such that $\left\langle M, \mathcal{F}_{1}\right\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M_{1}, \mathcal{F}_{1}^{\prime \prime}\right\rangle$ and $\left\langle M, \mathcal{F}_{2}\right\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M_{2}, \mathcal{F}_{2}^{\prime \prime}\right\rangle$. By definitions 8.3.1 and 8.3.2, $\mathcal{F}_{1}^{\prime \prime} \subseteq \mathcal{R}_{M_{1}}^{\beta \eta}$ and $\mathcal{F}_{2}^{\prime \prime} \subseteq \mathcal{R}_{M_{2}}^{\beta \eta}$. By lemma 8.6.2, there exist $\mathcal{F}_{1}^{\prime \prime \prime} \subseteq \mathcal{R}_{M_{1}}^{\beta \eta}$ and $\mathcal{F}_{2}^{\prime \prime \prime} \subseteq \mathcal{R}_{M_{2}}^{\beta \eta}$ such that $\left\langle M, \mathcal{F}_{1} \cup \mathcal{F}_{2}\right\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M_{1}, \mathcal{F}_{1}^{\prime \prime} \cup \mathcal{F}_{1}^{\prime \prime \prime}\right\rangle$ and $\left\langle M, \mathcal{F}_{1} \cup \mathcal{F}_{2}\right\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M_{2}, \mathcal{F}_{2}^{\prime \prime} \cup \mathcal{F}_{2}^{\prime \prime \prime}\right\rangle$. By lemma 7.6 .1 there exist $T \in \Psi^{c}\left(M, \mathcal{F}_{1} \cup \mathcal{F}_{2}\right), T_{1} \in$ $\Psi^{c}\left(M_{1}, \mathcal{F}_{1}^{\prime \prime} \cup \mathcal{F}_{1}^{\prime \prime \prime}\right)$ and $T_{2} \in \Psi^{c}\left(M_{2}, \mathcal{F}_{2}^{\prime \prime} \cup \mathcal{F}_{2}^{\prime \prime \prime}\right)$ such that $T \rightarrow_{\beta \eta}^{*} T_{1}$ and $T \rightarrow_{\beta \eta}^{*} T_{2}$.

Because by lemma 8.2.1c, $T \in \Lambda \eta_{c}$ and by lemma 6.6.2, $T$ is typable in the type system $\mathcal{D}$, so $T \in$ $\mathrm{CR}^{\beta \eta}$ by corollary 6.5 . So, by lemma 2.2 a , there exists $T_{3} \in \Lambda \eta_{c}$, such that $T_{1} \rightarrow{ }_{\beta \eta}^{*} T_{3}$ and $T_{2} \rightarrow_{\beta \eta}^{*} T_{3}$. Let $\mathcal{F}_{3}=\left|\left\langle T_{3}, \mathcal{R}_{T_{3}}^{\beta \eta}\right\rangle\right|^{c}$ and $M_{3}=\left|T_{3}\right|^{\beta \eta}$, then by lemma 8.2.2a, $\mathcal{F}_{3} \subseteq \mathcal{R}_{M_{3}}^{\beta \eta}$ and $T_{3} \in \Psi^{c}\left(M_{3}, \mathcal{F}_{3}\right)$. Hence, by lemma 8.6.1, $\left\langle M_{1}, \mathcal{F}_{1}^{\prime \prime} \cup \mathcal{F}_{1}^{\prime \prime \prime}\right\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M_{3}, \mathcal{F}_{3}\right\rangle$ and $\left\langle M_{2}, \mathcal{F}_{2}^{\prime \prime} \cup \mathcal{F}_{2}^{\prime \prime \prime}\right\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M_{3}, \mathcal{F}_{3}\right\rangle$, i.e. $M_{1} \xrightarrow{\mathcal{F}_{1}^{\prime \prime} \cup \mathcal{F}_{1}^{\prime \prime \prime}}{ }_{\beta \eta d} M_{3}$ and $M_{2} \xrightarrow{\mathcal{F}_{2}^{\prime \prime} \cup \mathcal{F}_{12}^{\prime \prime}}{ }_{\beta \eta d} M_{3}$.

Definition 8.8. Let $c \notin \operatorname{fv}(M)$. We define the following one step reduction:

$$
M \rightarrow_{1} M^{\prime} \Longleftrightarrow \exists \mathcal{F}, \mathcal{F}^{\prime},\langle M, \mathcal{F}\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle
$$

The next lemma is needed for the main proof of this section: the Church-Rosser property of the untyped $\lambda$-calculus w.r.t. $\beta \eta$-reduction and relates $\beta \eta$-developments to $\beta \eta$-reductions (lemma 8.9.5).

Lemma 8.9. 1. Let $c \notin \operatorname{fv}(M) . \forall P \in \Psi^{c}(M, \varnothing) . \mathcal{R}_{P}^{\beta \eta}=\varnothing$.
2. Let $c \notin \operatorname{fv}(M) \cup \mathrm{fv}(N)$ and $x \neq c . \forall P \in \Psi^{c}(M, \varnothing) . \forall Q \in \Psi^{c}(N, \varnothing) . \mathcal{R}_{P[x:=Q]}^{\beta \eta}=\varnothing$.
3. Let $c \notin \operatorname{fv}(M)$. If $p \in \mathcal{R}_{M}^{\beta \eta}, P \in \Psi^{c}(M,\{p\})$ and $P \rightarrow_{\beta \eta} Q$ then $\mathcal{R}_{Q}^{\beta \eta}=\varnothing$.
4. Let $c \notin \mathrm{fv}(M)$. If $M \xrightarrow{p}{ }_{\beta \eta} M^{\prime}$ then $\langle M,\{p\}\rangle \rightarrow_{\beta \eta d}\left\langle M^{\prime}, \varnothing\right\rangle$.
5. $\rightarrow_{\beta \eta}^{*}=\rightarrow_{1}^{*}$.

Proof: 1), 2) and 3) By induction on the structure of $M$.
4) By lemma 2.2.8, $p \in \mathcal{R}_{M}^{\beta \eta}$. By lemma 8.2.3, there exists a unique set $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta \eta}$, such that for all $N \in \Psi^{c}(M,\{p\})$, there exists $N^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$ such that $N \rightarrow_{\beta \eta} N^{\prime}$. Note that $\Psi^{c}(M,\{p\}) \neq \varnothing$. Let $N \in \Psi^{c}(M,\{p\})$ then there exists $N^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$ such that $N \rightarrow_{\beta \eta} N^{\prime}$. By lemma $3, \mathcal{R}_{N^{\prime}}^{\beta \eta}=\varnothing$, so $\left|\left\langle N^{\prime}, \mathcal{R}_{N^{\prime}}^{\beta \eta}\right\rangle\right|^{c}=\varnothing$ and by lemma 8.2.1h, $\mathcal{F}^{\prime}=\varnothing$. Finally, by lemma 8.6.1, $\langle M,\{p\}\rangle \rightarrow_{\beta \eta d}\left\langle M^{\prime}, \varnothing\right\rangle$.
5) By definition $\rightarrow_{1}^{*} \subseteq \rightarrow_{\beta \eta}^{*}$. We prove by induction on $M \rightarrow{ }_{\beta \eta}^{*} M^{\prime}$ that $\rightarrow_{\beta \eta}^{*} \subseteq \rightarrow_{1}^{*}$.

Finally, the next lemma is the main result of this section.
Lemma 8.10. $\Lambda \subseteq \mathrm{CR}^{\beta \eta}$.
Proof: Let $M \in \Lambda$ and let $c \in \mathcal{V}$ such that $c \notin \operatorname{fv}(M)$. Let $M \rightarrow{ }_{\beta \eta}^{*} M_{1}$ and $M \rightarrow{ }_{\beta \eta}^{*} M_{2}$. Then by lemma 5, $M \rightarrow{ }_{1}^{*} M_{1}$ and $M \rightarrow{ }_{1}^{*} M_{2}$. We prove the statement by induction on $M \rightarrow{ }_{1}^{*} M_{1}$.

## 9. Conclusion

Reducibility is a powerful concept which has been applied to prove a number of properties of the $\lambda$ calculus (Church-Rosser, strong normalisation, etc.) using a single method. This paper studied two reducibility methods which exploit the passage from typed (in an intersection type system) to untyped terms. We showed that the first method given by Ghilezan and Likavec [GL02] fails in its aim and we have only been able to provide a partial solution. We adapted the second method given by Koletsos and Stavrinos [KS08] from $\beta$ to $\beta I$-reduction and we generalised it to $\beta \eta$-reduction. There are differences in the type systems chosen and the methods of reducibility used by Ghilezan and Likavec on one hand and by Koletsos and Stavrinos on the other. Koletsos and Stavrinos use system $\mathcal{D}$ [Kri90], which has elimination rules for intersection types whereas Ghilezan and Likavec use $\lambda \cap$ and $\lambda \cap \Omega$ with subtyping. Moreover, Koletsos and Stavrinos's method depends on the inclusion of typable $\lambda$-terms in the set of $\lambda$-terms possessing the Church-Rosser property, whereas (the working part of) Ghilezan and Likavec's method aims to prove the inclusion of typable terms in an arbitrary subset of the untyped $\lambda$ calculus closed by some properties. Moreover, Ghilezan and Likavec consider the $\operatorname{VAR}(\mathcal{P}), \operatorname{SAT}(\mathcal{P})$, and $\operatorname{CLO}(\mathcal{P})$ predicates whereas Koletsos and Stavrinos use standard reducibility methods through saturated sets. Koletsos and Stavrinos prove the confluence of developments using the confluence of typable $\lambda$-terms in system $\mathcal{D}$ (the authors prove that even a simple type system is sufficient). The advantage of Koletsos and Stavrinos's proof of confluence of developments is that strong normalisation is not needed.

## A. Proofs of section 2

Proof(Lemma 2.2):
1 We prove the lemma by induction on $p$.

- Let $p=0$.

Let $M \xrightarrow{0}_{\beta \eta} M^{\prime}$ then either $M=(\lambda x . P) Q$ and $M^{\prime}=P[x:=Q]$ and so $M \xrightarrow{0}_{\beta} M^{\prime}$. Or $M=\lambda x \cdot M^{\prime} x$ such that $x \notin \mathrm{fv}\left(M^{\prime}\right)$ and so $M \xrightarrow{0}{ }_{\eta} M^{\prime}$.
Let $M \rightarrow_{\eta} 0 M^{\prime}$ then $M=\lambda x . M^{\prime} x$ such that $x \notin \mathrm{fv}\left(M^{\prime}\right)$ and so $M \xrightarrow{0}{ }_{\beta \eta} M^{\prime}$.
Let $M \rightarrow{ }_{\beta} 0 M^{\prime}$ then $M=(\lambda x . P) Q$ and $M^{\prime}=P[x:=Q]$ and so $M \xrightarrow{0}_{\beta \eta} M^{\prime}$.

- Let $p=1 . p^{\prime}$.

Let $M \xrightarrow{p} \beta \eta M^{\prime}$ then either $M=\lambda x \cdot N, M^{\prime}=\lambda x \cdot N^{\prime}$ and $N \xrightarrow{p^{\prime}} \beta \eta N^{\prime}$. By IH, $N \xrightarrow{p}{ }_{\beta} N^{\prime}$ or $N{\xrightarrow{p^{\prime}}}_{\eta} N^{\prime}$. So $M \xrightarrow{p} \beta M^{\prime}$ or $M \xrightarrow{p}_{\eta} M^{\prime}$. Or $M=P Q, M^{\prime}=P^{\prime} Q$ and $P{\xrightarrow{p^{\prime}}}_{\beta \eta} P^{\prime}$. By $\mathrm{IH}, P \xrightarrow{p}_{\beta} P^{\prime}$ or $P{\xrightarrow{p^{\prime}}}_{\eta} P^{\prime}$. So $M \xrightarrow{p}{ }_{\beta} M^{\prime}$ or $M \xrightarrow{p}{ }_{\eta} M^{\prime}$.
Let $M \xrightarrow{p}{ }_{\eta} M^{\prime}$ then either $M=\lambda x \cdot N, M^{\prime}=\lambda x \cdot N^{\prime}$ and $N \xrightarrow{p^{\prime}}{ }_{\eta} N^{\prime}$. By IH, $N \xrightarrow{p}{ }_{\beta \eta} N^{\prime}$, so $M \xrightarrow{p} \beta \eta M^{\prime}$. Or $M=P Q, M^{\prime}=P^{\prime} Q$ and $P \xrightarrow{p^{\prime}}{ }_{\eta} P^{\prime}$. By IH, $P \xrightarrow{p}_{\beta \eta} P^{\prime}$, so $M \xrightarrow{p}{ }_{\beta \eta} M^{\prime}$.
Let $M \xrightarrow{p}{ }_{\beta} M^{\prime}$ then either $M=\lambda x . N, M^{\prime}=\lambda x . N^{\prime}$ and $N \xrightarrow{p^{\prime}}{ }_{\beta} N^{\prime}$. By IH, $N \xrightarrow{p}_{\beta \eta} N^{\prime}$, so $M \xrightarrow{p} \beta \eta M^{\prime}$. Or $M=P Q, M^{\prime}=P^{\prime} Q$ and $P{\xrightarrow{p^{\prime}}}_{\beta} P^{\prime}$. By IH, $P \xrightarrow{p}_{\beta \eta} P^{\prime}$, so $M \xrightarrow{p}{ }_{\beta \eta} M^{\prime}$.

- Let $p=2 . p^{\prime}$.

Let $M \xrightarrow{p}_{\beta \eta} M^{\prime}$ then $M=P Q, M^{\prime}=P Q^{\prime}$ and $Q{\xrightarrow{p^{\prime}}}_{\beta \eta} Q^{\prime}$. By IH, $Q \xrightarrow{p}_{\beta} Q^{\prime}$ or $Q{\xrightarrow{p^{\prime}}}_{\eta} Q^{\prime}$. So $M \xrightarrow{p} \beta M^{\prime}$ or $M \xrightarrow{p}{ }_{\eta} M^{\prime}$.
Let $M \xrightarrow{p} \eta M^{\prime}$ then $M=P Q, M^{\prime}=P Q^{\prime}$ and $Q \xrightarrow{p^{\prime}} \eta Q^{\prime}$. By IH, $Q \xrightarrow{p} \beta \eta Q^{\prime}$, so $M \xrightarrow{p}{ }_{\beta \eta} M^{\prime}$.
Let $M \xrightarrow[\rightarrow]{p} M^{\prime}$ then $M=P Q, M^{\prime}=P Q^{\prime}$ and $Q{\xrightarrow{p^{\prime}}}_{\beta} Q^{\prime}$. By IH, $Q \xrightarrow{p}_{\beta \eta} Q^{\prime}$, so $M \xrightarrow{p}{ }_{\beta \eta} M^{\prime}$.

2 We prove this lemma by induction on the structure of $M_{1}$.

- Either $M_{1}=x$, then $\operatorname{fv}\left(\left(\lambda x \cdot M_{1}\right) M_{2}\right)=\mathrm{fv}\left(M_{2}\right)=\mathrm{fv}\left(M_{1}\left[x:=M_{2}\right]\right)$. If $\left(\lambda x \cdot M_{1}\right) M_{2} \in \Lambda \mathrm{I}$ then $M_{2}=M_{1}\left[x:=M_{2}\right] \in \Lambda \mathrm{I}$.
- Or $M_{1}=\lambda y \cdot M_{0}$ then $\operatorname{fv}\left(\left(\lambda x \cdot \lambda y \cdot M_{0}\right) M_{2}\right)=\operatorname{fv}\left(\left(\lambda x \cdot M_{0}\right) M_{2}\right) \backslash\{y\}={ }^{I H} \operatorname{fv}\left(M_{0}[x:=\right.$ $\left.\left.M_{2}\right]\right) \backslash\{y\}=\operatorname{fv}\left(M_{1}\left[x:=M_{2}\right]\right)$ such that $y \notin \operatorname{fv}\left(M_{2}\right) \cup\{x\}$. If $\left(\lambda x . \lambda y . M_{0}\right) M_{2} \in \Lambda \mathrm{I}$ then $M_{0}, M_{2} \in \Lambda \mathrm{I}$ and $x, y \in \operatorname{fv}\left(M_{0}\right)$. So $\left(\lambda x \cdot M_{0}\right) M_{2} \in \Lambda \mathrm{I}$. By IH, $M_{0}\left[x:=M_{2}\right] \in \Lambda \mathrm{II}$. Hence, $M_{1}\left[x:=M_{2}\right] \in \Lambda I$ such that $y \notin \operatorname{fv}\left(M_{2}\right) \cup\{x\}$.
- Or $M_{1}=P Q$ then $\operatorname{fv}\left((\lambda x . P Q) M_{2}\right)=\operatorname{fv}(\lambda x \cdot P) M_{2} \cup \mathrm{fv}\left((\lambda x \cdot Q) M_{2}\right)={ }^{I H} \operatorname{fv}(P[x:=$ $\left.\left.M_{2}\right]\right) \cup \mathrm{fv}\left(Q\left[x:=M_{2}\right]\right)=\operatorname{fv}\left((P Q)\left[x:=M_{2}\right]\right)$.

3. We prove the lemma by induction on the length of the reduction $M \rightarrow_{\beta \eta}^{*} M^{\prime}$.

- If $M=M^{\prime}$ then $\mathrm{fv}(M)=\mathrm{fv}\left(M^{\prime}\right)$
- Let $M \rightarrow_{\beta \eta}^{*} M^{\prime \prime} \rightarrow_{\beta \eta} M^{\prime}$. By IH, $\operatorname{fv}(M) \subseteq \operatorname{fv}\left(M^{\prime \prime}\right)$. By definition there exists $p$ such that $M^{\prime \prime} \xrightarrow{p}{ }_{\beta \eta} M^{\prime}$. We prove that $\mathrm{fv}\left(M^{\prime \prime}\right) \subseteq \operatorname{fv}\left(M^{\prime}\right)$ by induction on $p$.
* Let $p=0$.
either $M^{\prime \prime}=\left(\lambda x \cdot M_{1}\right) M_{2}$ and $M^{\prime}=M_{1}\left[x:=M_{2}\right]$. We prove that $\operatorname{fv}\left(M^{\prime}\right) \subseteq$ $\left(\mathrm{fv}\left(M_{1}\right) \backslash\{x\}\right) \cup \mathrm{fv}\left(M_{2}\right)=\mathrm{fv}\left(M^{\prime \prime}\right)$ by induction on the structure of $M_{1}$.

1. Let $M_{1}=y$. If $y=x$ then $M^{\prime}=M_{2}$ and $\operatorname{fv}\left(M^{\prime}\right)=\operatorname{fv}\left(M^{\prime \prime}\right)$. If $y \neq x$ then $M^{\prime}=y$ and $\mathrm{fv}\left(M^{\prime}\right)=\{y\} \subseteq\{y\} \cup \mathrm{fv}\left(M_{2}\right)=\mathrm{fv}\left(M^{\prime \prime}\right)$.
2. Let $M_{1}=\lambda y \cdot M_{1}^{\prime}$ then $M^{\prime}=\lambda y \cdot M_{1}^{\prime}\left[x:=M_{2}\right]$ such that $y \notin \mathrm{fv}\left(M_{2}\right) \cup\{x\}$. By $\operatorname{IH}, \operatorname{fv}\left(M_{1}^{\prime}\left[x:=M_{2}\right]\right) \subseteq \operatorname{fv}\left(\left(\lambda x \cdot M_{1}^{\prime}\right) M_{2}\right)$. Hence, $\operatorname{fv}\left(M^{\prime}\right)=\operatorname{fv}\left(M_{1}^{\prime}\left[x:=M_{2}\right]\right) \backslash$ $\{y\} \subseteq \operatorname{fv}\left(\left(\lambda x . M_{1}^{\prime}\right) M_{2}\right) \backslash\{y\}=\left(\operatorname{fv}\left(M_{1}^{\prime}\right) \backslash\{x, y\}\right) \cup\left(\operatorname{fv}\left(M_{2}\right) \backslash\{y\}\right)=\operatorname{fv}\left(M^{\prime \prime}\right)$.
3. Let $M_{1}=M_{1}^{\prime} M_{1}^{\prime \prime}$ then $M^{\prime}=M_{1}^{\prime}\left[x:=M_{2}\right] M_{1}^{\prime \prime}\left[x:=M_{2}\right]$. By IH, $\operatorname{fv}\left(M_{1}^{\prime}[x:=\right.$ $\left.\left.M_{2}\right]\right) \subseteq \operatorname{fv}\left(\left(\lambda x . M_{1}^{\prime}\right) M_{2}\right)$ and $\operatorname{fv}\left(M_{1}^{\prime \prime}\left[x:=M_{2}\right]\right) \subseteq \operatorname{fv}\left(\left(\lambda x \cdot M_{1}^{\prime \prime}\right) M_{2}\right)$.
Hence, $\operatorname{fv}\left(M^{\prime}\right)=\operatorname{fv}\left(M_{1}^{\prime}\left[x:=M_{2}\right]\right) \cup \operatorname{fv}\left(M_{1}^{\prime \prime}\left[x:=M_{2}\right]\right) \subseteq \operatorname{fv}\left(\left(\lambda x . M_{1}^{\prime}\right) M_{2}\right) \cup$ $\mathrm{fv}\left(\left(\lambda x . M_{1}^{\prime \prime}\right) M_{2}\right)=\left(\left(\mathrm{fv}\left(M_{1}^{\prime}\right) \cup \mathrm{fv}\left(M_{1}^{\prime \prime}\right)\right) \backslash\{x\}\right) \cup \mathrm{fv}\left(M_{2}\right)=\mathrm{fv}\left(M^{\prime \prime}\right)$.

- Or $M^{\prime \prime}=\lambda x . M^{\prime} x$ such that $x \notin \mathrm{fv}\left(M^{\prime}\right)$, so $\mathrm{fv}\left(M^{\prime \prime}\right)=\mathrm{fv}\left(M^{\prime}\right)$.
* Let $p=1 \cdot p^{\prime}$ then either $M^{\prime \prime}=\lambda x \cdot M_{1}, M^{\prime}=\lambda x \cdot M_{2}$ and $M_{1} \stackrel{p}{p}_{\beta \eta} M_{2}$. By IH, $\mathrm{fv}\left(M_{1}\right) \subseteq \mathrm{fv}\left(M_{2}\right)$, so $\mathrm{fv}\left(M^{\prime \prime}\right)=\mathrm{fv}\left(M_{1}\right) \backslash\{x\} \subseteq \mathrm{fv}\left(M_{2}\right) \backslash\{x\}=\mathrm{fv}\left(M^{\prime}\right)$. Or $M^{\prime \prime}=$ $M_{1} M_{2}, M^{\prime}=M_{1}^{\prime} M_{2}$ and $M_{1} \xrightarrow{p^{\prime}} \beta \eta M_{1}^{\prime}$. By $\mathrm{IH}, \mathrm{fv}\left(M_{1}\right) \subseteq \mathrm{fv}\left(M_{1}^{\prime}\right)$, so $\mathrm{fv}\left(M^{\prime \prime}\right)=$ $\mathrm{fv}\left(M_{1}\right) \cup \mathrm{fv}\left(M_{2}\right) \subseteq \mathrm{fv}\left(M_{1}^{\prime}\right) \cup \mathrm{fv}\left(M_{2}\right)=\mathrm{fv}\left(M^{\prime}\right)$.
* Let $p=2 . p^{\prime}$ then $M^{\prime \prime}=M_{1} M_{2}, M^{\prime}=M_{1} M_{2}^{\prime}$ and $M_{2} \xrightarrow{p^{\prime}} \beta \eta M_{2}^{\prime}$. By IH, $\mathrm{fv}\left(M_{2}\right) \subseteq$ $\mathrm{fv}\left(M_{2}^{\prime}\right)$, so $\mathrm{fv}\left(M^{\prime \prime}\right)=\mathrm{fv}\left(M_{1}\right) \cup \mathrm{fv}\left(M_{2}\right) \subseteq \operatorname{fv}\left(M_{1}\right) \cup \mathrm{fv}\left(M_{2}^{\prime}\right)=\mathrm{fv}\left(M^{\prime}\right)$.

4. We prove the lemma by induction on the length of the reduction $M \rightarrow_{\beta I}^{*} M^{\prime}$.

- If $M=M^{\prime}$ then $\mathrm{fv}(M)=\mathrm{fv}\left(M^{\prime}\right)$
- Let $M \rightarrow_{\beta I}^{*} M^{\prime \prime} \rightarrow_{\beta I} M^{\prime}$. By IH, $\mathrm{fv}(M)=\mathrm{fv}\left(M^{\prime \prime}\right)$ and if $M \in \Lambda \mathrm{I}$ then $M^{\prime \prime} \in \Lambda \mathrm{I}$. By definition there exists $p$ such that $M^{\prime \prime} \xrightarrow{p} \beta I M^{\prime}$. We prove that $\operatorname{fv}\left(M^{\prime \prime}\right)=\operatorname{fv}\left(M^{\prime}\right)$ and that if $M^{\prime \prime} \in \Lambda \mathrm{I}$ then $M^{\prime} \in \Lambda \mathrm{I}$ by induction on $p$.
* Let $p=0$ then $M^{\prime \prime}=\left(\lambda x \cdot M_{1}\right) M_{2}$ and $M^{\prime}=M_{1}\left[x:=M_{2}\right]$ such that $x \in \operatorname{fv}\left(M_{1}\right)$. So, by lemmma 2.2.2, $\mathrm{fv}\left(M^{\prime}\right)=\mathrm{fv}\left(M^{\prime \prime}\right)$ and if $M^{\prime \prime} \in \Lambda \mathrm{I}$ then $M^{\prime} \in \Lambda \mathrm{I}$.
* Let $p=1 . p^{\prime}$ then either $M^{\prime \prime}=\lambda x \cdot M_{1}, M^{\prime}=\lambda x \cdot M_{2}$ and $M_{1}{\xrightarrow{p^{\prime}}}_{\beta I} M_{2}$. By IH, $\mathrm{fv}\left(M_{1}\right)=\mathrm{fv}\left(M_{2}\right)$ and if $M_{1} \in \Lambda \mathrm{I}$ then $M_{2} \in \Lambda \mathrm{I}$, so $\mathrm{fv}\left(M^{\prime \prime}\right)=\mathrm{fv}\left(M_{1}\right) \backslash\{x\}=$ $\mathrm{fv}\left(M_{2}\right) \backslash\{x\}=\mathrm{fv}\left(M^{\prime}\right)$ and if $M^{\prime \prime} \in \Lambda \mathrm{I}$ then $x \in \mathrm{fv}\left(M_{1}\right)=\mathrm{fv}\left(M_{2}\right)$ and so $M^{\prime} \in \Lambda \mathrm{I}$. Or $M^{\prime \prime}=M_{1} M_{2}, M^{\prime}=M_{1}^{\prime} M_{2}$ and $M_{1}{\xrightarrow{p^{\prime}}}_{\beta \eta} M_{1}^{\prime}$. By IH, $\mathrm{fv}\left(M_{1}\right)=\mathrm{fv}\left(M_{1}^{\prime}\right)$ and if $M_{1} \in \Lambda \mathrm{I}$ then $M_{1}^{\prime} \in \Lambda \mathrm{I}$, so $\mathrm{fv}\left(M^{\prime \prime}\right)=\operatorname{fv}\left(M_{1}\right) \cup \mathrm{fv}\left(M_{2}\right)=\mathrm{fv}\left(M_{1}^{\prime}\right) \cup \operatorname{fv}\left(M_{2}\right)=\operatorname{fv}\left(M^{\prime}\right)$ and if $M^{\prime \prime} \in \Lambda \mathrm{I}$ then $M^{\prime} \in \Lambda \mathrm{I}$.
* Let $p=2 . p^{\prime}$ then $M^{\prime \prime}=M_{1} M_{2}, M^{\prime}=M_{1} M_{2}^{\prime}$ and $M_{2}{\xrightarrow{p^{\prime}}}_{\beta \eta} M_{2}^{\prime}$. By IH, $\mathrm{fv}\left(M_{2}\right)=$ $\mathrm{fv}\left(M_{2}^{\prime}\right)$ and if $M_{2} \in \Lambda \mathrm{I}$ then $M_{2}^{\prime} \in \Lambda \mathrm{I}$, so $\mathrm{fv}\left(M^{\prime \prime}\right)=\mathrm{fv}\left(M_{1}\right) \cup \mathrm{fv}\left(M_{2}\right)=\mathrm{fv}\left(M_{1}\right) \cup$ $\mathrm{fv}\left(M_{2}^{\prime}\right)=\mathrm{fv}\left(M^{\prime}\right)$ and if $M^{\prime \prime} \in \Lambda \mathrm{I}$ then $M^{\prime} \in \Lambda \mathrm{I}$.

5. $\Rightarrow$ ) Let $\lambda x \cdot M \xrightarrow{p}{ }_{\beta \eta} P$. We prove the result by case on $p$. Either $p=0$ and $M=P x$ such that $x \notin \mathrm{fv}(P)$. Or $p=1 . p^{\prime}, P=\lambda x \cdot M^{\prime}$ and $M \xrightarrow{p^{\prime}}{ }_{\beta \eta} M^{\prime}$.
$\Leftrightarrow)$ If $P=\lambda x . M^{\prime}$ and $M \rightarrow_{\beta \eta} p M^{\prime}$. So, $\lambda x \cdot M \xrightarrow{1 . p} \beta_{\beta \eta} P$ and $\lambda x . M \rightarrow_{\beta \eta} P$. If $M=P x$ and $x \notin f v P$ then $\lambda x \cdot M=\lambda x \cdot P x \xrightarrow{0}_{\beta \eta} P$, so $\lambda x \cdot M \rightarrow_{\beta \eta} P$.

6a. If $k=0$ then $P=(\lambda x . M) N_{1} N_{1} \ldots N_{n}$ is a direct $r$-reduct of $(\lambda x . M) N_{0} N_{1} \ldots N_{n}$, absurd. So $k \geq 1$. Assume $k=1$, we prove $P=M\left[x:=N_{0}\right] N_{1} \ldots N_{n}$ by induction on $n \geq 0$.

- Let $n=0$ and $r=\beta I$. By definition there exists $p$ such that $(\lambda x . M) N_{0} \xrightarrow{p} \beta I P$. We prove the result by case on $p$.
* Let $p=0$ then $P=M\left[x:=N_{0}\right]$ and $x \in \mathrm{fv}(M)$.
* Let $p=1 \cdot p^{\prime}$ then $\lambda x \cdot M \xrightarrow{p^{\prime}} \beta I \lambda x . M^{\prime}$ and $P=\left(\lambda x \cdot M^{\prime}\right) N_{0}$ is a direct $\beta I$-reduct of $(\lambda x . M) N_{0}$, absurd.
* Let $p=2 . p^{\prime}$ then $N_{0} \xrightarrow{p^{\prime}} \beta I N^{\prime}$ and $P=(\lambda x \cdot M) N^{\prime}$ is a direct $\beta I$-reduct of $(\lambda x . M) N_{0}$, absurd.
- Let $n=0$ and $r=\beta \eta$. By definition there exists $p$ such that $(\lambda x . M) N_{0} \xrightarrow{p}_{\beta I} P$. We prove the result by case on $p$.
* Let $p=0$ then $P=M\left[x:=N_{0}\right]$.
* Let $p=1 . p^{\prime}$ then $\lambda x . M \xrightarrow{p^{\prime}} \beta \eta$ and $P=Q N_{0}$. By lemma 2.2.5:
- Either $p^{\prime}=1 \cdot p^{\prime \prime}, Q=\lambda x \cdot M^{\prime}$ and $M \xrightarrow{p^{\prime \prime}}{ }_{\beta \eta} M^{\prime}$. Hence $P=\left(\lambda x \cdot M^{\prime}\right) N_{0}$ is a direct $\beta \eta$-reduct of $(\lambda x . M) N_{0}$, absurd.
- Or $p=0, M=Q x$ and $x \notin \mathrm{fv}(Q)$. Hence, $P=Q N_{0}=M\left[x:=N_{0}\right]$.
* Let $p=2 . p^{\prime}$ then $N_{0} \xrightarrow{p^{\prime}} \beta \eta N^{\prime}$ and $P=(\lambda x \cdot M) N^{\prime}$ is a direct $\beta \eta$-reduct of $(\lambda x . M) N_{0}$, absurd.
- Let $n=m+1$ where $m \geq 0$. By definition there exists $p$ such that $(\lambda x . M) N_{0} \ldots N_{m+1}{ }^{p}{ }_{r}$ $P$. We prove the result by case on $p$.
* Either $p=1 \cdot p^{\prime}$ then $(\lambda x \cdot M) N_{0} \ldots N_{m}{\xrightarrow{p^{\prime}}}_{r} Q$ and $P=Q N_{m+1}$.
- If $Q$ is a direct $r$-reduct of $(\lambda x . M) N_{0} \ldots N_{m}$ then $P$ is a direct $r$-reduct of $(\lambda x . M) N_{0} \ldots N_{m+1}$, absurd.
- If $Q$ is not a direct $r$-reduct of $(\lambda x . M) N_{0} \ldots N_{m}$ then it is done by IH.
* Or $p=2 \cdot p^{\prime}$ then $N_{m+1} \xrightarrow{p^{\prime}}{ }_{r} N_{m+1}^{\prime}$ and $P=(\lambda x \cdot M) N_{0} \ldots N_{m} N_{m+1}^{\prime}$ which is a direct $r$-reduct of $(\lambda x . M) N_{0} \ldots N_{m+1}$, absurd.

6 b. By $6 \mathrm{a}, k \geq 1$. We prove the statement by induction on $k \geq 1$.

- If $k=1$ then we conclude by 6 a .
- Let $(\lambda x . M) N_{0} \ldots N_{n} \rightarrow_{r}^{*} Q \rightarrow_{r} P$.
* If $Q$ is a direct $r$-reduct of $(\lambda x . M) N_{0} \ldots N_{n}$, then $Q=\left(\lambda x . M^{\prime}\right) N_{0}^{\prime} \ldots N_{n}^{\prime}$, such that $M \rightarrow_{r}^{*} M^{\prime}$ and $\forall i \in\{0, \ldots, n\}, N_{i} \rightarrow_{r}^{*} N_{i}^{\prime}$. Since $P$ is not a direct $r$-reduct of $(\lambda x . M) N_{0} \ldots N_{n}, P$ is not a direct $r$-reduct of $Q$. Hence by 6 a, $P=M^{\prime}[x:=$ $\left.N_{0}^{\prime}\right] N_{1}^{\prime} \ldots N_{n}^{\prime}$.
* If $Q$ is not a direct $r$-reduct of $(\lambda x . M) N_{0} \ldots N_{n}$, then by IH, there exists a direct $r$ reduct $\left(\lambda x . M^{\prime}\right) N_{0}^{\prime} \ldots N_{n}^{\prime}$ of $(\lambda x . M) N_{0} \ldots N_{n}$ such that $M^{\prime}\left[x:=N_{0}^{\prime}\right] N_{1}^{\prime} \ldots N_{n}^{\prime} \rightarrow_{r}^{*}$ $Q \rightarrow_{r} P$.

7. If $P$ is a direct $r$-reduct of $(\lambda x . M) N_{0} \ldots N_{n}$ then $P=\left(\lambda x . M^{\prime}\right) N_{0}^{\prime} \ldots N_{n}^{\prime}$ such that $M \rightarrow_{r}^{*} M^{\prime}$ and $\forall i \in\{0, \ldots, n\}, N_{i} \rightarrow_{r}^{*} N_{i}^{\prime}$. So $P \rightarrow_{r} M^{\prime}\left[x:=N_{0}^{\prime}\right] N_{1}^{\prime} \ldots N_{n}^{\prime}$ (if $r=\beta I$, note that $x \in \operatorname{fv}\left(M^{\prime}\right)$ by lemma 2.2.4) and $M\left[x:=N_{0}\right] N_{1} \ldots N_{n} \rightarrow_{r}^{*} M^{\prime}\left[x:=N_{0}^{\prime}\right] N_{1}^{\prime} \ldots N_{n}^{\prime}$. If $P$ is not a direct $r$-reduct of $(\lambda x . M) N_{0} \ldots N_{n}$ then by lemma 6.6b, there exists a direct $r$-reduct, $\left(\lambda x . M^{\prime}\right) N_{0}^{\prime} \ldots N_{n}^{\prime}$, such that $M \rightarrow_{r}^{*} M^{\prime}$ and $\forall i \in\{0, \ldots, n\}, N_{i} \rightarrow_{r}^{*} N_{i}^{\prime}$, of $(\lambda x . M) N_{0} \ldots N_{n}$. We have $M\left[x:=N_{0}\right] N_{1} \ldots N_{n} \rightarrow{ }_{r}^{*} M^{\prime}\left[x:=N_{0}^{\prime}\right] N_{1}^{\prime} \ldots N_{n}^{\prime} \rightarrow{ }_{r}^{*} P$.
8. We prove this lemma by induction on ths structure of $p$.

- Let $p=0$ it is done by definition.
- Let $p=1 . p^{\prime}$. Then:
* Either $M=\lambda x \cdot M_{1} \xrightarrow{1 \cdot p^{\prime}}{ }_{r} \lambda x \cdot M_{1}^{\prime}=M^{\prime}$ such that $M_{1} \xrightarrow{p^{\prime}}{ }_{r} M_{1}^{\prime}$. By IH, $p^{\prime} \in \mathcal{R}_{M_{1}}^{r}$. So $p \in \mathcal{R}_{M}^{r}$. If $p \in \mathcal{R}_{M}^{r}$ then $\left.M\right|_{p}=\left.M_{1}\right|_{p^{\prime}} \in \mathcal{R}^{r}$. By IH, there exists $M_{1}^{\prime}$ such that $M_{1}{\xrightarrow{p^{\prime}}}_{r} M_{1}^{\prime}$, so $M \xrightarrow{p}{ }_{r} \lambda x . M_{1}^{\prime}$.
* Or $M=M_{1} M_{2} \xrightarrow{1 . p}{ }_{r} M_{1}^{\prime} M_{2}=M^{\prime}$ such that $M_{1} \xrightarrow{p^{\prime}}{ }_{r} M_{1}^{\prime}$. By IH, $p^{\prime} \in \mathcal{R}_{M_{1}}^{r}$. So $p \in \mathcal{R}_{M}^{r}$. If $p \in \mathcal{R}_{M}^{r}$ then $\left.M\right|_{p}=\left.M_{1}\right|_{p^{\prime}} \in \mathcal{R}^{r}$. By IH, there exists $M_{1}^{\prime}$ such that $M_{1} \xrightarrow{p^{\prime}}{ }_{r} M_{1}^{\prime}$, so $M \xrightarrow{p}{ }_{r} M_{1}^{\prime} M_{2}$.
- Let $p=2 . p^{\prime}$. Then, $M=M_{1} M_{2} \xrightarrow{1 . p} r M_{1} M_{2}^{\prime}=M^{\prime}$ such that $M_{2} \xrightarrow{p^{\prime}}{ }_{r} M_{2}^{\prime}$. By IH, $p^{\prime} \in \mathcal{R}_{M_{2}}^{r}$. So $p \in \mathcal{R}_{M}^{r}$. If $p \in \mathcal{R}_{M}^{r}$ then $\left.M\right|_{p}=\left.M_{2}\right|_{p^{\prime}} \in \mathcal{R}^{r}$. By IH, there exists $M_{2}^{\prime}$ such that $M_{2}{\xrightarrow{p^{\prime}}}_{r} M_{2}^{\prime}$, so $M \xrightarrow{p}{ }_{r} M_{1} M_{2}^{\prime}$.

9. We prove this lemma by induction on ths structure of $p$.

- Let $p=0$ it is done by definition.
- Let $p=1 . p^{\prime}$. Then either $M=\lambda x \cdot M^{\prime} \xrightarrow{1 \cdot p^{\prime}}{ }_{r} \lambda x \cdot M_{1}^{\prime}=M_{1}$ such that $M^{\prime}{\xrightarrow{p^{\prime}}}_{r} M_{1}^{\prime}$. By definition, $M_{2}=\lambda x . M_{2}^{\prime}$ and $M^{\prime} \xrightarrow{p^{\prime}}{ }_{r} M_{2}^{\prime}$. By IH, $M_{1}^{\prime}=M_{2}^{\prime}$, so $M_{1}=M_{2}$. Or $M=$ $M^{\prime} N \xrightarrow{1 . p} M_{1}^{\prime} N=M_{1}$ such that $M^{\prime} \xrightarrow{p^{\prime}} r M_{1}^{\prime}$. By definition, $M_{2}=M_{2}^{\prime} N$ and $M^{\prime} \xrightarrow{p^{\prime}} r M_{2}^{\prime}$. By IH, $M_{1}^{\prime}=M_{2}^{\prime}$, so $M_{1}=M_{2}$.
- Let $p=2 . p^{\prime}$. Then $M=N M^{\prime} \xrightarrow{1 . p}_{r} N M_{1}^{\prime}=M_{1}$ such that $M^{\prime}{\xrightarrow{p^{\prime}}}_{r} M_{1}^{\prime}$. By definition, $M_{2}=N M_{2}^{\prime}$ and $M^{\prime}{\xrightarrow{p^{\prime}}}_{r} M_{2}^{\prime}$. By IH, $M_{1}^{\prime}=M_{2}^{\prime}$, so $M_{1}=M_{2}$.

Proof(Lemma 5.2):

1. We prove the lemma by induction on the structure of $M$.

- Let $M=y$.
- Either $y=x$ then $M[x:=c(c x)]=c(c x) \neq x$ and for any $N$, $M[x:=c(c x)]=c(c x) \neq N x$ because $c x \neq x$.
- Or $y \neq x$ then $M[x:=c(c x)]=y \neq x$ and for any $N$, $M[x:=c(c x)]=y \neq N x$.
- Let $M=\lambda y . P$. Then, $M[x:=c(c x)]=\lambda y \cdot P[x:=c(c x)] \neq x$ (such that $y \notin\{c, x\}$ ) and for any $N, M[x:=c(c x)] \neq N x$.
- Let $M=P Q$. Then, $M[x:=c(c x)]=P[x:=c(c x)] Q[x:=c(c x)] \neq x$. Assume $M[x:=c(c x)]=N x$, so $Q[x:=c(c x)]=x$ and by IH, absurd.

2. We prove this lemma by induction on the structure of $M$.

- Let $M=z$.
- Either $z=y$ then $M[y:=c(c x)]=c(c x) \neq x$ and for any $N, M[y:=c(c x)]=$ $c(c x) \neq N x$ because $c x \neq x$.
- $\operatorname{Or} z \neq y$ then $M[y:=c(c x)]=z \neq x$ by hypothesis and for any $N, M[y:=c(c x)]=$ $z \neq N x$.
- Let $M=\lambda z . P$. Then, $M[y:=c(c x)]=\lambda z . P[y:=c(c x)] \neq x$ (such that $y \notin\{c, x, y\}$ ) and for any $N, M[y:=c(c x)] \neq N x$.
- Let $M=P Q$. Then, $M[y:=c(c x)]=P[x:=c(c x)] Q[x:=c(c x)] \neq x$. Assume $M[y:=c(c x)]=N x$, so $Q[y:=c(c x)]=x$ and by IH , absurd.

3. By cases on the derivation of $M \in \mathcal{M}_{c}$.
4. By cases on the structure of $M$ using 3 .
5. By cases on the derivation of $M N \in \mathcal{M}_{c}$.
6. We prove this result by induction on $n$.

- If $n=0$ then it is done.
- Let $n=m+1$ such that $m \geq 0$. By lemma 5.2.5, $c^{m}(M) \in \mathcal{M}_{c}$ then by IH, $M \in \mathcal{M}_{c}$.

7. Easy.
8. By cases on the derivation of $\lambda x \cdot P \in \Lambda \eta_{c}$.
9. By cases on the derivation of $\lambda x . P \in \Lambda_{c}$.
10. We prove the lemma by induction on the structure of $M \in \mathcal{M}_{c}$.

- Case (R1)1. Either $M=x$ then $M[x:=N]=N \in \mathcal{M}_{c}$. Or $M=y \neq x$ then $M[x:=$ $N]=M \in \mathcal{M}_{c}$.
- Case (R1)2. Let $M=\lambda y . P \in \Lambda \mathrm{I}_{c}$ such that $y \neq c, P \in \Lambda \mathrm{I}_{c}$ and $y \in \mathrm{fv}(P)$. We have $M[x:=N]=\lambda y \cdot M[x:=N]$ such that $y \notin \operatorname{fv}(N) \cup\{x\}$. By $\mathrm{IH}, P[x:=N] \in \Lambda \mathrm{I}_{c}$, so $M[x:=N] \in \Lambda I_{c}$.
- Case (R1)3. Let $M=\lambda y . P[y:=c(c y)] \in \Lambda \eta_{c}$ such that $y \neq c$ and $P \in \Lambda \eta_{c}$. By IH, $P[x:=N] \in \Lambda \eta_{c}$. So by (R1). $3 M[x:=N]=\lambda y \cdot P[y:=c(c y)][x:=N]=\lambda y \cdot P[x:=$ $N][y:=c(c y)] \in \Lambda \eta_{c}$ such that $y \notin \operatorname{fv}(N) \cup\{x\}$.
- Case (R1)4. Let $M=\lambda y$. $P y$ such that $P y \in \Lambda \eta_{c}, y \notin \operatorname{fv}(P) \cup\{c\}$ and $P \neq c$. We have $M[x:=N]=\lambda y \cdot(P y)[x:=N]=\lambda y \cdot P[x:=N] y$, such that $y \notin \mathrm{fv}(N) \cup\{x\}$. By IH, $P[x:=N] y \in \Lambda \eta_{c}$. By lemma 5.2.4, $P[x:=N] \neq c$. Hence, because $y \notin \operatorname{fv}(P[x:=N])$, $M[x:=N] \in \Lambda \eta_{c}$.
- Case (R2) Let $M=c M_{1} M_{2}$ such that $M_{1}, M_{2} \in \mathcal{M}_{c}$. Then by IH, $M_{1}[x:=N], M_{2}[x:=$ $N] \in \mathcal{M}_{c}$. Hence, $c M_{1}[x:=N] M_{2}[x:=N] \in \mathcal{M}_{c}$.
- Case (R3) Let $M=M_{1} M_{2}$ such that $M_{1}, M_{2} \in \mathcal{M}_{c}$ and $M_{1}$ is a $\lambda$-abstraction. Then by $\mathrm{IH}, M_{1}[x:=N], M_{2}[x:=N] \in \mathcal{M}_{c}$. Hence, $M_{1}[x:=N] M_{2}[x:=N] \in \mathcal{M}_{c}$, since $M_{1}[x:=N]$ is a $\lambda$-abstraction.
- Case (R4) Let $M=c P$ such that $P \in \Lambda \eta_{c}$. Then by IH, $P[x:=N] \in \Lambda \eta_{c}$ and by (R4), $M[x:=N] \in \Lambda \eta_{c}$.

11. By case on the structure of $M$.

- let $M \in \mathcal{V}$.
- Either $M=x$ then, $M[x:=c(c x)]=c(c x)$. Hence, $c(c x) \neq y, c(c x) \neq P y$ since $c x \neq y, c(c x) \neq \lambda y . P$ and $c(c x) \neq(\lambda y . P) Q$. If $M[x:=c(c x)]=P Q$ then $P=c$ and $Q=c x$.
- Or $M=z \neq x$ then $M[x:=c(c x)]=z$. Hence, if $z=y$ then $M=y, z \neq P y$, $z \neq \lambda y . P, z \neq P Q$ and $z \neq(\lambda y . P) Q$.
- Let $M=\lambda z \cdot M^{\prime}$ then $M[x:=c(c x)]=\lambda z \cdot M^{\prime}[x:=c(c x)]$, where $z \notin\{x, c\}$. Hence, $\lambda z \cdot M^{\prime}[x:=c(c x)] \neq y, \lambda z \cdot M^{\prime}[x:=c(c x)] \neq P y, \lambda z \cdot M^{\prime}[x:=c(c x)] \neq P Q$ and $\lambda z \cdot M^{\prime}[x:=c(c x)] \neq(\lambda y \cdot P) Q$. Let $\lambda z \cdot M^{\prime}[x:=c(c x)]=\lambda y . P$. By $\alpha$-converions, assume $y=z$. So $M^{\prime}[x:=c(c x)]=P$.
- Let $M=M_{1} M_{2}$ then $M[x:=c(c x)]=M_{1}[x:=c(c x)] M_{2}[x:=c(c x)]$. Hence, $M_{1}[x:=$ $c(c x)] M_{2}[x:=c(c x)] \neq y$ and $M_{1}[x:=c(c x)] M_{2}[x:=c(c x)] \neq \lambda y . P$. If $M_{1}[x:=$ $c(c x)] M_{2}[x:=c(c x)]=P y$ then $P=M_{1}[x:=c(c x)]$ and $M_{2}[x:=c(c x)]=y$. So $M_{2}=y$. If $M_{1}[x:=c(c x)] M_{2}[x:=c(c x)]=P Q$ then $P=M_{1}[x:=c(c x)]$ and $Q=M_{2}[x:=c(c x)]$. If $M_{1}[x:=c(c x)] M_{2}[x:=c(c x)]=(\lambda y \cdot P) Q$ then $\lambda y \cdot P=$ $M_{1}[x:=c(c x)]$ and $Q=M_{2}[x:=c(c x)]$. So $M_{1}=\lambda y \cdot M_{0}$ and $P=M_{0}[x:=c(c x)]$

12. 12a. By definition, $x \neq c$. By lemma 5.2.8, either $P=N x$ where $N x \in \Lambda \eta_{c}$ or $P=$ $N[x:=c(c x))]$ where $N \in \Lambda \eta_{c}$. In the second case since by (R4) $c(c x) \in \Lambda \eta_{c}$, we get by lemma 5.2.10 that $N[x:=c(c x))] \in \Lambda \eta_{c}$.
12b. By lemma 5.2.1 and lemma 5.2.8.
13. 13a. $\Rightarrow)$ We prove the lemma by induction on the structure of $p$.

- Let $p=0$ then:
- either $M[x:=c(c x)]=(\lambda y \cdot P) Q$ and $M^{\prime}=P[y:=Q]$. By lemma 5.2.11, $M=\left(\lambda y \cdot P^{\prime}\right) Q^{\prime}, P=P^{\prime}[x:=c(c x)]$ and $Q=Q^{\prime}[x:=c(c x)]$ such that $y \notin\{c, x\}$. So $M^{\prime}=P^{\prime}\left[y:=Q^{\prime}\right][x:=c(c x)]$ and $M \xrightarrow{0}_{\beta \eta} P^{\prime}\left[y:=Q^{\prime}\right]$.
- Or $M[x:=c(c x)]=\lambda y . M^{\prime} y$ such that $y \notin \mathrm{fv}\left(M^{\prime}\right)$. By lemma 5.2.11, $M=$ $\lambda y \cdot N$ and $M^{\prime} y=N[x:=c(c x)]$ such that $y \notin\{x, c\}$. Again by lemma 5.2.11, $N=N^{\prime} y$ and $M^{\prime}=N^{\prime}[x:=c(c x)]$. Because $y \notin \mathrm{fv}\left(M^{\prime}\right)$, we obatin $y \notin$ $\mathrm{fv}\left(N^{\prime}\right)$ and so $M=\lambda y \cdot N^{\prime} y \xrightarrow{0}_{\beta \eta} N^{\prime}$.
- Let $p=1 . p^{\prime}$. Then:
- Either $M[x:=c(c x)]=\lambda y \cdot P{\xrightarrow{1 \cdot p^{\prime}}}_{\beta \eta} \lambda y \cdot P^{\prime}=M^{\prime}$ such that $P{\xrightarrow{p^{\prime}}}_{\beta \eta} P^{\prime}$. By lemma 5.2.11, $M=\lambda y . N$ and $P=N[x:=c(c x)]$ such that $y \notin\{c, x\}$. By IH, $P^{\prime}=N^{\prime}[x:=c(c x)]$ and $N \xrightarrow{p^{\prime}} \beta \eta N^{\prime}$. So $M^{\prime}=\left(\lambda y \cdot N^{\prime}\right)[x:=c(c x)]$ and $M \xrightarrow{1 . p} \beta \eta \lambda y . N^{\prime}$.
- Or $M[x:=c(c x)]=P Q \xrightarrow{1 . p^{\prime}} \beta \eta P^{\prime} Q=M^{\prime}$ such that $P{\xrightarrow{p^{\prime}}}_{\beta \eta} P^{\prime}$. Then by lemma 5.2.11, either $M=x$ and $P=c$ and $Q=c x$ but then $P{\xrightarrow{p^{\prime}}}_{\beta \eta} P^{\prime}$ is wrong. Or $M=P_{0} Q_{0}, P=P_{0}[x:=c(c x)]$ and $Q=Q_{0}[x:=c(c x)]$. By $\mathrm{IH}, P^{\prime}=P_{0}^{\prime}[x:=c(c x)]$ and $P_{0}{\xrightarrow{p^{\prime}}}_{\beta \eta} P_{0}^{\prime}$. So $M^{\prime}=\left(P_{0}^{\prime} Q_{0}\right)[x:=c(c x)]$ and $P_{0} Q_{0} \xrightarrow{1 . p^{\prime}} \beta_{\eta} P_{0}^{\prime} Q_{0}$.
- Let $p=2 \cdot p^{\prime}$ then $M[x:=c(c x)]=P Q \xrightarrow{2 \cdot p^{\prime}} \beta \eta P Q^{\prime}=M^{\prime}$ such that $Q \xrightarrow{p^{\prime}} \beta \eta Q^{\prime}$. Then by lemma 5.2.11, either $M=x$ and $P=c$ and $Q=c x$ but then $Q{\xrightarrow{p^{\prime}}}_{\beta \eta} Q^{\prime}$ is wrong. Or $M=P_{0} Q_{0}, P=P_{0}[x:=c(c x)]$ and $Q=Q_{0}[x:=c(c x)]$. By IH, $Q^{\prime}=Q_{0}^{\prime}[x:=c(c x)]$ and $Q_{0}{\xrightarrow{p^{\prime}}}_{\beta \eta} Q_{0}^{\prime}$. So $M^{\prime}=\left(P_{0} Q_{0}^{\prime}\right)[x:=c(c x)]$ and $P_{0} Q_{0} \xrightarrow{2 \cdot p^{\prime}}{ }_{\beta \eta} P_{0} Q_{0}^{\prime}$.
$\Leftrightarrow)$ We prove the lemma by induction on the structure of $p$.
- Let $p=0$ then:
- Either $M=\lambda y . N y$ such that $y \notin \mathrm{fv}(N)$. Then $M[x:=c(c x)]=\lambda y \cdot N[x:=$ $c(c x)] y \xrightarrow{0}_{\beta \eta} N[x:=c(c x)]$ such that $y \notin\{c, x\}$.
- Or $M=(\lambda y \cdot P) Q$ and $M^{\prime}=P[y:=Q]$. Then $M[x:=c(c x)]=(\lambda y \cdot P[x:=$ $c(c x)]) Q[x:=c(c x)] \xrightarrow{0}_{\beta \eta} P[x:=c(c x)][y:=Q[x:=c(c x)]]=P[y:=$ $Q][x:=c(c x)]$ such that $y \notin\{c, x\}$.
- Let $p=1 . p^{\prime}$.
- Either $M=\lambda y \cdot N \xrightarrow{p}_{\beta \eta} \lambda y \cdot N^{\prime}=M^{\prime}$ such that $N{\xrightarrow{p^{\prime}}}_{\beta \eta} N^{\prime}$. By IH, $N[x:=$ $c(c x)] \xrightarrow{p^{\prime}} \beta \eta N^{\prime}[x:=c(c x)]$. So, $M[x:=c(c x)] \xrightarrow{p}{ }_{\beta \eta} M^{\prime}[x:=c(c x)]$ such that $y \notin\{c, x\}$.
- Or $M=P Q \xrightarrow{p}_{\beta \eta} P^{\prime} Q=M^{\prime}$ such that $P{\xrightarrow{p^{\prime}}}_{\beta \eta} P^{\prime}$. By IH, $P[x:=c(c x)]{\xrightarrow{p^{\prime}}}_{\beta \eta}$ $P^{\prime}[x:=c(c x)]$. So, $M[x:=c(c x)]{ }^{p}{ }_{\beta \eta} M^{\prime}[x:=c(c x)]$.
- Let $p=2 . p^{\prime}$ then $M=P Q \xrightarrow{p} \beta \eta P Q^{\prime}=M^{\prime}$ such that $Q{\xrightarrow{p^{\prime}}}_{\beta \eta} Q^{\prime}$. By IH, $Q[x:=c(c x)]{\xrightarrow{p^{\prime}}}_{\beta \eta} Q^{\prime}[x:=c(c x)]$. So, $M[x:=c(c x)] \xrightarrow{p}_{\beta \eta} M^{\prime}[x:=c(c x)]$.
13b. We prove this lemma by induction on $n$.
- Let $n=0$ then it is done.
- Let $n=m+1$ such that $m \geq 0$. Then $c^{n}(M)=c\left(c^{m}(M)\right) \xrightarrow{p}{ }_{\beta \eta} M^{\prime}$. By case on $p$ we obtain that $p=2 . p^{\prime}$ and $M^{\prime}=c\left(N^{\prime}\right)$ and $c^{m}(M) \xrightarrow{p^{\prime}} \beta \eta N^{\prime}$. By IH, $p^{\prime}=2^{m} \cdot p^{\prime \prime}$ and there exists $N^{\prime \prime} \in \Lambda \eta_{c}$ such that $N^{\prime}=c^{m}\left(N^{\prime \prime}\right)$ and $M \xrightarrow{p^{\prime \prime}} \beta \eta N^{\prime \prime}$. So $p=2^{n} \cdot p^{\prime \prime}$ and $M^{\prime}=c^{n}\left(N^{\prime \prime}\right)$.
$\operatorname{Proof}($ Lemma 5.3): We split the proof of this lemma in two.
We prove the first part of this lemma by case on the structure of $M$.
- Let $M \in \mathcal{V}$ and $p \in \mathcal{R}_{M}^{r}$. So $\left.M\right|_{p} \in \mathcal{R}^{r}$. We prove by case on the structure of $p$ that there is no such $p$.
- Let $p=0$ then $\left.M\right|_{p}=M \notin \mathcal{R}^{r}$.
- Let $p=1 . p^{\prime}$ then $\left.M\right|_{p}$ is undefined.
- Let $p=2 . p^{\prime}$ then $\left.M\right|_{p}$ is undefined.
- Let $M=\lambda x . N$.
- Let $M \in \mathcal{R}^{r}$. We prove by case on the structure of $p$ that if $p \in \mathcal{R}_{M}^{r}$ then $p \in\{0\} \cup\left\{1 . p^{\prime} \mid\right.$ $\left.p^{\prime} \in \mathcal{R}_{N}^{r}\right\}$.
* Let $p=0$ then $\left.M\right|_{p}=M \in \mathcal{R}^{r}$.
* Let $p=1 . p^{\prime}$ then $\left.M\right|_{p}=\left.N\right|_{p^{\prime}} \in \mathcal{R}^{r}$, so $p^{\prime} \in \mathcal{R}_{N}^{r}$.
* Let $p=2 . p^{\prime}$ then $\left.M\right|_{p}$ is undefined.

Let $p \in\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{N}^{r}\right\}$, we prove that $p \in \mathcal{R}_{M}^{r}$.

* Let $p=0$. Since $M=\left.M\right|_{p} \in \mathcal{R}^{r}$, by definition, $p \in \mathcal{R}_{M}^{r}$.
* Let $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{N}^{r}$. By definition $\left.M\right|_{p}=\left.N\right|_{p^{\prime}} \in \mathcal{R}^{r}$.
- Let $M \notin \mathcal{R}^{r}$. We prove by case on the structure of $p$ that if $p \in \mathcal{R}_{M}^{r}$ then $p \in\left\{1 . p^{\prime} \mid p^{\prime} \in\right.$ $\left.\mathcal{R}_{N}^{r}\right\}$.
* Let $p=0$ then $\left.M\right|_{p}=M \notin \mathcal{R}^{r}$.
* Let $p=1 . p^{\prime}$ then $\left.M\right|_{p}=\left.N\right|_{p^{\prime}} \in \mathcal{R}^{r}$, so $p^{\prime} \in \mathcal{R}_{N}^{r}$.
* Let $p=2 . p^{\prime}$ then $\left.M\right|_{p}$ is undefined.

Let $p \in\left\{1 . p^{\prime} \mid p^{\prime} \in \mathcal{R}_{N}^{r}\right\}$, we prove that $p \in \mathcal{R}_{M}^{r}$. Then, $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{N}^{r}$. By definition $\left.M\right|_{p}=\left.N\right|_{p^{\prime}} \in \mathcal{R}^{r}$.

- Let $M=P Q$.
- Let $M \in \mathcal{R}^{r}$. We prove by case on the structure of $p$ that if $p \in \mathcal{R}_{M}^{r}$ then $p \in\{0\} \cup\left\{1 . p^{\prime} \mid\right.$ $\left.p^{\prime} \in \mathcal{R}_{P}^{r}\right\} \cup\left\{2 . p^{\prime} \mid p^{\prime} \in \mathcal{R}_{Q}^{r}\right\}$.
* Let $p=0$ then $\left.M\right|_{p}=M \in \mathcal{R}^{r}$.
* Let $p=1 . p^{\prime}$ then $\left.M\right|_{p}=\left.P\right|_{p^{\prime}} \in \mathcal{R}^{r}$, so $p^{\prime} \in \mathcal{R}_{P}^{r}$.
* Let $p=2 . p^{\prime}$ then $\left.M\right|_{p}=\left.Q\right|_{p^{\prime}} \in \mathcal{R}^{r}$, so $p^{\prime} \in \mathcal{R}_{Q}^{r}$.

Let $p \in\{0\} \cup\left\{1 . p^{\prime} \mid p^{\prime} \in \mathcal{R}_{P}^{r}\right\} \cup\left\{2 . p^{\prime} \mid p^{\prime} \in \mathcal{R}_{Q}^{r}\right\}$, we prove that $p \in \mathcal{R}_{M}^{r}$.

* Let $p=0$. Since $\left.M\right|_{p}=M \in \mathcal{R}^{r}$, so $p \in \mathcal{R}_{M}^{r}$.
* Let $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{P}^{r}$. Since $\left.M\right|_{p}=\left.P\right|_{p^{\prime}} \in \mathcal{R}^{r}, p \in \mathcal{R}_{M}^{r}$
* Let $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{Q}^{r}$. Since $\left.M\right|_{p}=\left.Q\right|_{p^{\prime}} \in \mathcal{R}^{r}, p \in \mathcal{R}_{M}^{r}$
- Let $M \notin \mathcal{R}^{r}$. We prove by induction on the structure of $p$ that if $p \in \mathcal{R}_{M}^{r}$ then $p \in\left\{1 . p^{\prime} \mid\right.$ $\left.p^{\prime} \in \mathcal{R}_{P}^{r}\right\} \cup\left\{1 . p^{\prime} \mid p^{\prime} \in \mathcal{R}_{Q}^{r}\right\}$.
* Let $p=0$ then $\left.M\right|_{p}=M \notin \mathcal{R}^{r}$.
* Let $p=1 . p^{\prime}$ then $\left.M\right|_{p}=\left.P\right|_{p^{\prime}} \in \mathcal{R}^{r}$, so $p^{\prime} \in \mathcal{R}_{P}^{r}$.
* Let $p=2 . p^{\prime}$ then $\left.M\right|_{p}=\left.Q\right|_{p^{\prime}} \in \mathcal{R}^{r}$, so $p^{\prime} \in \mathcal{R}_{Q}^{r}$.

Let $p \in\left\{1 . p^{\prime} \mid p^{\prime} \in \mathcal{R}_{P}^{r}\right\} \cup\left\{2 . p^{\prime} \mid p^{\prime} \in \mathcal{R}_{Q}^{r}\right\}$, we prove that $p \in \mathcal{R}_{M}^{r}$.

* Let $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{P}^{r}$. Since $\left.M\right|_{p}=\left.P\right|_{p^{\prime}} \in \mathcal{R}^{r}, p \in \mathcal{R}_{M}^{r}$
* Let $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{Q}^{r}$. Since $\left.M\right|_{p}=\left.Q\right|_{p^{\prime}} \in \mathcal{R}^{r}, p \in \mathcal{R}_{M}^{r}$

We prove the second part of this lemma by case on the structure of $M$.

- Let $M \in \mathcal{V}$, by lemma 5.3, $\mathcal{R}_{M}^{r}=\varnothing$, so $\mathcal{F}=\varnothing$.
- Let $M=\lambda y . N$ then by lemma 5.3:
- If $M \in \mathcal{R}^{r}$ then $\mathcal{R}_{M}^{r}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{N}^{r}\right\}$. Let $\mathcal{F}^{\prime}=\{p \mid 1 . p \in \mathcal{F}\}$. Let $p \in \mathcal{F}^{\prime}$ then 1. $p \in \mathcal{F}$, so $p \in \mathcal{R}_{N}^{r}$.
* Let $p \in \mathcal{F} \backslash\{0\}$ then $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{N}^{r}$. So $p^{\prime} \in \mathcal{F}^{\prime}$ and it is done.
* Let $p \in\left\{1 . p^{\prime} \mid p^{\prime} \in \mathcal{F}^{\prime}\right\}$ then $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{F}^{\prime}$. So $1 . p^{\prime}=p \in \mathcal{F} \backslash\{0\}$.
- If $M \notin \mathcal{R}^{r}$ then $\mathcal{R}_{M}^{r}=\left\{1 . p \mid p \in \mathcal{R}_{N}^{r}\right\}$. Let $\mathcal{F}^{\prime}=\{p \mid 1 . p \in \mathcal{F}\}$. Let $p \in \mathcal{F}^{\prime}$ then 1. $p \in \mathcal{F}$, so $p \in \mathcal{R}_{N}^{r}$.
* Let $p \in \mathcal{F}$ then $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{N}^{r}$. So $p^{\prime} \in \mathcal{F}^{\prime}$ and it is done.
* Let $p \in\left\{1 . p^{\prime} \mid p^{\prime} \in \mathcal{F}^{\prime}\right\}$ then $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{F}^{\prime}$. So 1. $p^{\prime}=p \in \mathcal{F}$.
- Let $M=P Q$ then by lemma 5.3:
- If $M \in \mathcal{R}^{r}$ then $\mathcal{R}_{M}^{r}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{P}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q}^{r}\right\}$. Let $\mathcal{F}_{1}=\{p \mid 1 . p \in \mathcal{F}\}$ and $\mathcal{F}_{2}=\{2 . p \mid p \in \mathcal{F}\}$. Let $p \in \mathcal{F}_{1}$ then 1. $p \in \mathcal{F}$, so $p \in \mathcal{R}_{p}^{r}$. Let $p \in \mathcal{F}_{2}$ then 2.p $\in \mathcal{F}$, so $p \in \mathcal{R}_{Q}^{r}$.
* Let $p \in \mathcal{F} \backslash\{0\}$. Either $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{P}^{r}$, so $p^{\prime} \in \mathcal{F}_{1}$ and it is done. Or $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{Q}^{r}$, so $p^{\prime} \in \mathcal{F}_{2}$ and it is done.
* Let $p \in\left\{1 . p^{\prime} \mid p^{\prime} \in \mathcal{F}_{1}\right\} \cup\left\{2 . p^{\prime} \mid p^{\prime} \in \mathcal{F}_{2}\right\}$. Either $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{F}_{1}$, so $1 . p^{\prime} \in \mathcal{F} \backslash\{0\}$. Or $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{F}_{2}$, so $2 . p^{\prime} \in \mathcal{F} \backslash\{0\}$.
- If $M \notin \mathcal{R}^{r}$ then $\mathcal{R}_{M}^{r}=\left\{1 . p \mid p \in \mathcal{R}_{P}^{r}\right\} \cup\left\{2 . p|p| p \in \mathcal{R}_{Q}^{r}\right\}$. Let $\mathcal{F}_{1}=\{p \mid 1 . p \in \mathcal{F}\}$ and $\mathcal{F}_{2}=\{p \mid 2 . p \in \mathcal{F}\}$. Let $p \in \mathcal{F}_{1}$ then 1. $p \in \mathcal{F}$, so $p \in \mathcal{R}_{P}^{r}$. Let $p \in \mathcal{F}_{2}$ then $2 . p \in \mathcal{F}$, so $p \in \mathcal{R}_{Q}^{r}$.
* Let $p \in \mathcal{F}$. Either $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{P}^{r}$, so $p^{\prime} \in \mathcal{F}_{1}$ and it is done. Or $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{Q}^{r}$, so $p^{\prime} \in \mathcal{F}_{2}$ and it is done.
* Let $p \in\left\{1 . p^{\prime} \mid p^{\prime} \in \mathcal{F}_{1}\right\} \cup\left\{2 . p^{\prime} \mid p^{\prime} \in \mathcal{F}_{2}\right\}$. Either $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{F}_{1}$, so $1 . p^{\prime} \in \mathcal{F}$. Or $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{F}_{2}$, so $2 . p^{\prime} \in \mathcal{F}$.

## Proof(Lemma 5.4):

1. By case on the structure of $M$.

- Let $M \in \mathcal{V}$ then $M, M[x:=c(c x)] \notin \mathcal{R}^{\beta \eta}$.
- Let $M=\lambda y \cdot N$ then $M[x:=c(c x)]=\lambda y \cdot N[x:=c(c x)]$, where $y \notin\{x, c\}$.
- If $M \in \mathcal{R}^{\beta \eta}$ then $N=P y$ such that $y \notin \mathrm{fv}(P) . N[x:=c(c x)]=P[x:=c(c x)] y$ and $y \notin \mathrm{fv}(P[x:=c(c x)])$, so $M[x:=c(c x)] \in \mathcal{R}^{\beta \eta}$.
- If $M[x:=c(c x)] \in \mathcal{R}^{\beta \eta}$ then $N[x:=c(c x)]=P y$ such that $y \notin \operatorname{fv}(P)$. By 5.2.11, $N=Q y$ and $P=Q[x:=c(c x)]$. So $M=\lambda y$. Qy. Because $y \notin \mathrm{fv}(P)$, we obtain $y \notin \mathrm{fv}(Q)$ and so $M \in \mathcal{R}^{\beta \eta}$.
- Let $M=M_{1} M_{2}$ then $M[x:=c(c x)]=M_{1}[x:=c(c x)] M_{2}[x:=c(c x)]$.
- If $M \in \mathcal{R}^{\beta \eta}$ then $M_{1}=\lambda y \cdot M_{0}$. So $M[x:=c(c x)]=\left(\lambda y \cdot M_{0}[x:=c(c x)]\right) M_{2}[x:=$ $c(c x)] \in \mathcal{R}^{\beta \eta}$, where $y \notin\{x, c\}$.
- If $M[x:=c(c x)] \in \mathcal{R}^{\beta \eta}$ then $M_{1}[x:=c(c x)]=\lambda y . P$. By 5.2.11, $M_{1}=\lambda y . M_{0}$ and $P=M_{0}[x:=c(c x)]$ such that $y \notin\{c, x\}$. So, $M \in \mathcal{R}^{\beta \eta}$

2. We prove this result by inducion on the structure of $M$.

- If $M \in \mathcal{V}$ then by lemma $5.3, \mathcal{R}_{M}^{\beta \eta}=\varnothing$.
- Let $M=\lambda y \cdot M^{\prime}$. Then $M[x:=c(c x)]=\lambda y \cdot M^{\prime}[x:=c(c x)]$ where $y \notin\{x, c\}$. By lemma 5.3:
- If $M \in \mathcal{R}^{\beta \eta}$ then let $p=0$. Then, $\left.M[x:=c(c x)]\right|_{p}=M[x:=c(c x)]=\left.M\right|_{p}[x:=$ $c(c x)]$
- Let $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{M^{\prime}}^{\beta \eta}$. Then, $\left.M[x:=c(c x)]\right|_{p}=\left.M^{\prime}[x:=c(c x)]\right|_{p^{\prime}}={ }^{I H}$ $\left.M^{\prime}\right|_{p^{\prime}}[x:=c(c x)]=\left.M\right|_{p}[x:=c(c x)]$.
- Let $M=M_{1} M_{2}$. Then $M[x:=c(c x)]=M_{1}[x:=c(c x)] M_{2}[x:=c(c x)]$. By lemma 5.3:
- If $M \in \mathcal{R}^{\beta \eta}$ then let $p=0$. Then, $\left.M[x:=c(c x)]\right|_{p}=M[x:=c(c x)]=\left.M\right|_{p}[x:=$ $c(c x)]$
- Let $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{M_{1}}^{\beta \eta}$. Then, $\left.M[x:=c(c x)]\right|_{p}=\left.M_{1}[x:=c(c x)]\right|_{p^{\prime}}={ }^{I H}$ $\left.M_{1}\right|_{p^{\prime}}[x:=c(c x)]=\left.M\right|_{p}[x:=c(c x)]$.
- Let $p=2 \cdot p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{M_{2}}^{\beta \eta}$. Then, $\left.M[x:=c(c x)]\right|_{p}=\left.M_{2}[x:=c(c x)]\right|_{p^{\prime}}={ }^{I H}$ $\left.M_{2}\right|_{p^{\prime}}[x:=c(c x)]=\left.M\right|_{p}[x:=c(c x)]$.

3. $\Rightarrow)$ Let $p \in \mathcal{R}_{\lambda x . M[x:=c(c x)]}^{\beta \eta}$. By lemma 5.2.1, $\lambda x . M[x:=c(c x)] \notin \mathcal{R}^{\beta \eta}$ so by lemma 5.3, $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{M[x:=c(c x)]}^{\beta \eta}$.
$\Leftrightarrow)$ Let $p \in \mathcal{R}_{M[x:=c(c x)]}^{\beta \eta}$. By lemma 5.3, 1. $p \in \mathcal{R}_{\lambda x . M[x:=c(c x)]}^{\beta \eta}$.
4. $\Rightarrow)$ Let $p \in \mathcal{R}_{M[x:=c(c x)]}^{\beta \eta}$. We prove the statement by induction on the structure of $M$

- $M \notin \mathcal{V}$ since by lemma 5.3, $\mathcal{R}_{M[x:=c(c x)]}^{\beta \eta}=\varnothing$.
- Let $M=\lambda y \cdot N$ so $M[x:=c(c x)]=\lambda y \cdot N[x:=c(c x)]$, where $y \notin\{x, c\}$. By lemma 5.3:
* Either if $M[x:=c(c x)] \in \mathcal{R}^{\beta \eta}, p=0$. By $1, M \in \mathcal{R}^{\beta \eta}$, so $p \in \mathcal{R}_{M}^{\beta \eta}$.
* Or $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{N[x:=c(c x)]}^{\beta \eta}$. By IH, $p^{\prime} \in \mathcal{R}_{N}^{\beta \eta}$. Hence by lemma 5.3, $p=1 . p^{\prime} \in \mathcal{R}_{M}^{\beta \eta}$.
- Let $M=M_{1} M_{2}$ so $M[x:=c(c x)]=M_{1}[x:=c(c x)] M_{2}[x:=c(c x)]$. By lemma 5.3:
* Either if $M[x:=c(c x)] \in \mathcal{R}^{\beta \eta}, p=0$. By $1, M \in \mathcal{R}^{\beta \eta}$, so $0 \in \mathcal{R}_{M}^{\beta \eta}$.
* Or $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{M_{1}[x:=c(c x)]}^{\beta \eta}$. By IH, $p^{\prime} \in \mathcal{R}_{M_{1}}^{\beta \eta}$. Hence by lemma 5.3, $p=1 . p^{\prime} \in \mathcal{R}_{M}^{\beta \eta}$.
* Or $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{M_{2}[x:=c(c x)]}^{\beta \eta}$. By IH, $p^{\prime} \in \mathcal{R}_{M_{2}}^{\beta \eta}$. Hence by lemma 5.3, $p=2 . p^{\prime} \in \mathcal{R}_{M}^{\beta \eta}$.
$\Leftrightarrow)$ Let $p \in \mathcal{R}_{M}^{r}$. Then by definition $\left.M\right|_{p} \in \mathcal{R}^{\beta \eta}$. By $1,\left.M\right|_{p}[x:=c(c x)] \in \mathcal{R}^{\beta \eta}$. By 2, $\left.M[x:=c(c x)]\right|_{p} \in \mathcal{R}^{\beta \eta}$. So $p \in \mathcal{R}_{M[x:=c(c x)]}^{\beta \eta}$.

5. We prove this statement by induction on $n \geq 0$.

- Let $n=0$ then trivial.
- Let $n=m+1$ such that $m \geq 0$. By lemma 5.3, $\mathcal{R}_{c^{m}(M)}^{\beta \eta}=\left\{1 . p \mid p \in \mathcal{R}_{c}^{\beta \eta}\right\} \cup\{2 . p \mid p \in$ $\left.\mathcal{R}_{c^{m}(M)}^{\beta \eta}\right\}={ }^{I H}\left\{2^{n} . p \mid p \in \mathcal{R}_{M}^{\beta \eta}\right\}$.
$\operatorname{Proof}($ Lemma 5.5.1a): We prove the statement by case on $r$.
- Either $r=\beta I$. Since $M \in \Lambda \mathrm{I}_{c}, M \in \Lambda \mathrm{I}$, so $\lambda x . P, Q \in \Lambda \mathrm{I}$. Hence, $x \in \operatorname{fv}(P)$ and $M \in \mathcal{R}^{\beta I}$.
- Or $r=\beta \eta$. Trivial.
$\operatorname{Proof}($ Lemma 5.5.1b): We prove the statement by induction on the structure of $M$.
- Let $M \in \mathcal{V} \backslash\{c\}$. By lemma 5.3, $\mathcal{R}_{M}^{r}=\varnothing$.
- Let $M=\lambda x . N \in \Lambda \mathbf{I}_{c}$ such that $N \in \Lambda \mathrm{I}_{c}$ and let $p \in \mathcal{R}_{M}^{\beta I}$. Since $M \notin \mathcal{R}^{\beta I}$, by lemma 5.3, $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{N}^{\beta I}$. So by $\mathrm{IH},\left.M\right|_{p}=\left.N\right|_{p^{\prime}} \in \Lambda \mathrm{I}_{c}$.
- Let $M=\lambda x \cdot N[x:=c(c x)] \in \Lambda \eta_{c}$ such that $N \in \Lambda \eta_{c}$ and let $p \in \mathcal{R}_{M}^{\beta \eta}$. By lemma 5.4.3, $p=1 . p^{\prime}$ and $p^{\prime} \in \mathcal{R}_{N[x:=c(c x)]}^{\beta \eta}$. By lemma 5.4.4, $p^{\prime} \in \mathcal{R}_{N}^{\beta \eta}$. By IH, $\left.N\right|_{p^{\prime}} \in \Lambda \eta_{c}$. So, $\left.M\right|_{p}=$ $\left.N[x:=c(c x)]\right|_{p^{\prime}}=\left.5.42\right|_{p^{\prime}}[x:=c(c x)]$. By lemma 5.2.10, $\left.N\right|_{p^{\prime}}[x:=c(c x)] \in \Lambda \eta_{c}$.
- Let $M=\lambda x . N x \in \Lambda \eta_{c}$ such that $N x \in \Lambda \eta_{c}, x \notin \operatorname{fv}(N)$ and $c \neq N$. Let $p \in \mathcal{R}_{M}^{\beta \eta}$. Since $M \in \mathcal{R}^{\beta \eta}$, by lemma 5.3:
- Either $p=0$ so $\left.M\right|_{p}=M \in \Lambda \eta_{c}$.
- Or $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{N x}^{\beta \eta}$. By IH, $\left.M\right|_{p}=\left.(N x)\right|_{p^{\prime}} \in \Lambda \eta_{c}$.
- Let $M=c N P \in \mathcal{M}_{c}$ such that $N, P \in \mathcal{M}_{c}$. Let $p \in \mathcal{R}_{M}^{r}$. Since $M, c N \notin \mathcal{R}^{r}$, by lemma 5.3:
- Either $p=1.2 \cdot p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{N}^{r}$. By IH, $\left.M\right|_{p}=\left.N\right|_{p^{\prime}} \in \mathcal{M}_{c}$.
- Or $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{r}^{P}$. By IH, $\left.M\right|_{p}=\left.P\right|_{p^{\prime}} \in \mathcal{M}_{c}$.
- Let $M=(\lambda x . N) P \in \mathcal{M}_{c}$ such that $\lambda x . N, P \in \mathcal{M}_{c}$. Let $p \in \mathcal{R}_{M}^{r}$. Since by lemma 1a, $M \in \mathcal{R}^{r}$, by lemma 5.3:
- Either $p=0$ so $\left.M\right|_{p}=M \in \mathcal{M}_{c}$.
- Or $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{\lambda x . N}^{r}$. By IH, $\left.M\right|_{p}=\left.(\lambda x . N)\right|_{p^{\prime}} \in \mathcal{M}_{c}$.
- Or $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{P}^{r}$. By IH, $\left.M\right|_{p}=\left.P\right|_{p^{\prime}} \in \mathcal{M}_{c}$.
- Let $M=c N \in \Lambda \eta_{c}$ such that $N \in \Lambda \eta_{c}$. Let $p \in \mathcal{R}_{M}^{\beta \eta}$. Since $M \notin \mathcal{R}^{\beta \eta}$, by lemma 5.3, $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{N}^{\beta \eta}$. By IH, $\left.M\right|_{p}=\left.N\right|_{p^{\prime}} \in \Lambda \eta_{c}$.

## Proof(Lemma 5.5.2):

2a. Let $M \in \Lambda \eta_{c}$ and $M \rightarrow_{\beta \eta} M^{\prime}$. Then there exists $p$ such that $M \xrightarrow{p}_{\beta \eta} M^{\prime}$. We prove that $M^{\prime} \in \Lambda \eta_{c}$ by induction on the structure of $p$.

- Let $p=0$. Then:
- either $M=\lambda x \cdot M^{\prime} x$ such that $x \notin \mathrm{fv}\left(M^{\prime}\right)$. Because $M \in \Lambda \eta_{c}$, then $M^{\prime} x \in \Lambda \eta_{c}$ and $x \neq c$. By lemma 5.2.8, $M^{\prime} \in \Lambda \eta_{c}$.
- or $M=(\lambda x . N) P$ and $M^{\prime}=N[x:=P]$. Since $M \in \Lambda \eta_{c}$ then $\lambda x . N, P \in \Lambda \eta_{c}$. By definition and lemmas 5.2.10, $N \in \Lambda \eta_{c}$ and $x \neq c$. By lemma 5.2.10, $M^{\prime} \in \Lambda \eta_{c}$.
- Let $p=1 . p^{\prime}$. Then:
- either $M=\lambda x . N \xrightarrow{p}_{\beta \eta} \lambda x \cdot N^{\prime}=M^{\prime}$ such that $N{\xrightarrow{p^{\prime}}}_{\beta \eta} N^{\prime}$. Since $M \in \Lambda \eta_{c}$ :
* Either $N=P[x:=c(c x)]$ where $P \in \Lambda \eta_{c}$ and $x \neq c$. So by lemma 5.2.13a, $N^{\prime}=N^{\prime \prime}[x:=c(c x)]$ and $P \rightarrow_{\beta \eta} N^{\prime \prime}$. By IH, $N^{\prime \prime} \in \Lambda \eta_{c}$ so by (R1).3, $M^{\prime}=$ $\lambda x \cdot N^{\prime \prime}[x:=c(c x)] \in \Lambda \eta_{c}$.
* Or $N=P x$ where $P x \in \Lambda \eta_{c}, x \notin \mathrm{fv}(P) \cup\{c\}, P \neq c$. By IH, $N^{\prime} \in \Lambda \eta_{c}$. By lemma 5.2.8, $P \in \Lambda \eta_{c}$. By case on $p^{\prime}$ :
- Either $p^{\prime}=0, P=(\lambda y . Q)$ and $N^{\prime}=Q[y:=x]$. Hence $M^{\prime}=\lambda x \cdot Q[y:=x]=$ $P \in \Lambda \eta_{c}$.
- Or $p^{\prime}=1 . p^{\prime \prime}, N^{\prime}=P^{\prime} x$ and $P \xrightarrow{p^{\prime \prime}} \beta \eta P^{\prime}$. By lemma 2.2.3, $x \notin \mathrm{fv}\left(P^{\prime}\right)$. By IH, $P^{\prime} \in \Lambda \eta_{c}$, so by lemma 5.2.3, $P^{\prime} \neq c$. Hence, $M^{\prime}=\lambda x . P^{\prime} x \in \Lambda \eta_{c}$.
- or $M=M_{1} M_{2} \xrightarrow{p} \beta \eta M_{1}^{\prime} M_{2}=M^{\prime}$ such that $M_{1}{\xrightarrow{p^{\prime}}}_{\beta \eta} M_{1}^{\prime}$. By lemma 5.2.5, $M_{2} \in \Lambda \eta_{c}$ and because $M_{1} \neq c$ we obtain:
* Either $M_{1}=c M_{0}$ and $M_{0} \in \Lambda \eta_{c}$. By case on $p^{\prime}$ we obtain $p^{\prime}=2 . p^{\prime \prime}, M_{1}^{\prime}=c M_{0}^{\prime}$ and $M_{0}{\stackrel{p^{\prime \prime}}{ }}_{\beta \eta} M_{0}^{\prime}$. By IH, $M_{0}^{\prime} \in \Lambda \eta_{c}$, so by (R2), $M^{\prime}=c M_{0}^{\prime} M_{2} \in \Lambda \eta_{c}$.
* Or $M_{1}=\lambda x . M_{0}$ and $M_{1} \in \Lambda \eta_{c}$. By IH, $M_{1}^{\prime} \in \Lambda \eta_{c}$. By lemma 5.2.12a, $M_{0} \in \Lambda \eta_{c}$. lemma 5.2.8, $x \neq c$. By case on $p^{\prime}$ :
- Either $p^{\prime}=0$ and $M_{0}=M_{1}^{\prime} x$ such that $x \notin \operatorname{fv}\left(M_{1}^{\prime}\right)$. Because $M_{0}=M_{1}^{\prime} x \in$ $\Lambda \eta_{c}$, by definition and lemma 5.2.5 we obtain $M^{\prime}=M_{1}^{\prime} M_{2} \in \Lambda \eta_{c}$.
- Or $p^{\prime}=1 . p^{\prime \prime}$ and $M_{1}^{\prime}=\lambda x \cdot M_{0}^{\prime}$ such that $M_{0} \xrightarrow{p^{\prime \prime}} \beta \eta M_{0}^{\prime}$. So $M^{\prime}=\left(\lambda x \cdot M_{0}^{\prime}\right) M_{2} \in$ $\Lambda \eta_{c}$.
- Let $p=2 . p^{\prime}$. Then $M=M_{1} M_{2} \xrightarrow{p} \beta \eta M_{1} M_{2}^{\prime}=M^{\prime}$ such that $M_{2}{\xrightarrow{p^{\prime}}}_{\beta \eta} M_{2}^{\prime}$. By lemma 5.2.5, $M_{2} \in \Lambda \eta_{c}$ so by $\mathrm{IH}, M_{2}^{\prime} \in \Lambda \eta_{c}$. Because $M=M_{1} M_{2} \in \Lambda \eta_{c}$, again by lemma 5.2.5 $M^{\prime}=M_{1} M_{2}^{\prime} \in \Lambda \eta_{c}$.

2b. By induction on $M \rightarrow_{\beta I} M^{\prime}$ in a similar fashion to the above.

Proof(Lemma 5.7.1): We prove the statement by induction on $n \geq 0$.

- Let $n=0$ then by definition $\left|c^{n}(M)\right|^{c}=|M|^{c}$.
- Let $n=m+1$ such that $m \geq 0$ then $\left|c^{n}(M)\right|^{c}=\left|c\left(c^{m}(M)\right)\right|^{c}=\left|c^{m}(M)\right|^{c}={ }^{I H}|M|^{c}$.
$\operatorname{Proof(Lemma~5.7.2):~We~prove~the~lemma~by~induction~on~} n$.
- If $n=0$ then it is done.
- Let $n=m+1$ such that $m \geq 0$. Then, $\left|\left\langle c^{n}(M), \mathcal{R}_{c^{n}(M)}^{\beta \eta}\right\rangle\right|^{c}=\left\{\left|\left\langle c^{n}(M), p\right\rangle\right|^{c} \mid p \in \mathcal{R}_{c^{n}(M)}^{\beta \eta}\right\}=^{5.3}$ $\left\{\left|\left\langle c^{n}(M), 2 \cdot p\right\rangle\right|^{c} \mid p \in \mathcal{R}_{c^{m}(M)}^{\beta \eta}\right\}=\left\{\left|\left\langle c^{m}(M), p\right\rangle\right|^{c} \mid p \in \mathcal{R}_{c^{m}(M)}^{\beta \eta}\right\}={ }^{I H}\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}$.

Proof(Lemma 5.7.3): We prove the lemma by induction on $n$.

- If $n=0$ then it is done.
- Let $n=m+1$ such that $m \geq 0$. Then, $\left|\left\langle c^{n}(M), 2^{n} \cdot p\right\rangle\right|^{c}=\left|\left\langle c^{m}(M), 2^{m} \cdot p\right\rangle\right|^{c}={ }^{I H}|\langle M, p\rangle|^{c}$

## Proof(Lemma 5.7.4):

- let $P \in \mathcal{V}$. We prove the statement by induction on the structure of $M$.
- Let $M \in \mathcal{V}$ then $|M|^{c}=M=P$.
- Let $M=\lambda x . N$ then $|M|^{c}=\lambda x .|N|^{c} \neq P$.
- Let $M=M_{1} M_{2}$. If $M_{1}=c$ then $|M|^{c}=\left|M_{2}\right|^{c}$. By IH, $\exists n \geq 0$ such that $M_{2}=c^{n}(P)$. If $M_{1} \neq c$ then $|M|^{c}=\left|M_{1}\right|^{c}\left|M_{2}\right|^{c} \neq P$.
- Let $P=\lambda x . Q$. We prove the statement by induction on the structure of $M$.
- Let $M \in \mathcal{V}$ then $|M|^{c}=M \neq \lambda x . Q$.
- Let $M=\lambda x . N$ then $|M|^{c}=\lambda x .|N|^{c}$ so $|N|^{c}=Q$.
- Let $M=M_{1} M_{2}$. If $M_{1}=c$ then $|M|^{c}=\left|M_{2}\right|^{c}$. By IH, $\exists n \geq 0$ such that $M_{2}=c^{n}(\lambda x . N)$ and $|N|^{c}=Q$. If $M_{1} \neq c$ then $|M|^{c}=\left|M_{1}\right|^{c}\left|M_{2}\right|^{c} \neq \lambda x . Q$.
- Let $P=P_{1} P_{2}$. We prove the statement by induction on the structure of $M$.
- Let $M \in \mathcal{V}$ then $|M|^{c}=M \neq P_{1} P_{2}$.
- Let $M=\lambda x$. $N$ then $|M|^{c}=\lambda x .|N|^{c} \neq P_{1} P_{2}$.
- Let $M=M_{1} M_{2}$. If $M_{1}=c$ then $|M|^{c}=\left|M_{2}\right|^{c}$. By IH, $\exists n \geq 0$ such that $M_{2}=$ $c^{n}\left(M_{2}^{\prime} M_{2}^{\prime \prime}\right), M_{2}^{\prime} \neq c,\left|M_{2}^{\prime}\right|^{c}=P_{1}$ and $\left|M_{2}^{\prime \prime}\right|^{c}=P_{2}$. If $M_{1} \neq c$ then $|M|^{c}=\left|M_{1}\right|^{c}\left|M_{2}\right|^{c}=$ $P_{1} P_{2}$ so $\left|M_{1}\right|^{c}=P_{1}$ and $\left|M_{2}\right|^{c}=P_{2}$.

Proof(Lemma 5.8.1): We prove the statement by induction on $M$.

- Let $M \in \mathcal{V}$ then by lemma 5.3, $\mathcal{R}_{M}^{r}=\varnothing$.
- Let $M=\lambda x$. $N$ then by lemma 5.3:
- Either $M \in \mathcal{R}^{r}$ then:
* Either $p=p^{\prime}=0$ so it is done.
* Or $p=0$ and $p^{\prime}=1$. $p_{1}^{\prime}$ such that $p_{1}^{\prime} \in \mathcal{R}_{N}^{r}$. Then, $|\langle M, 0\rangle|^{c}=0 \neq\left|\left\langle M, p^{\prime}\right\rangle\right|^{c}=$ 1. $\left|\left\langle N, p_{1}^{\prime}\right\rangle\right|^{c}$.
* Or $p=1 . p_{1}$ and $p^{\prime}=1 . p_{1}^{\prime}$ such that $p_{1}, p_{1} \in \mathcal{R}_{N}^{r}$. By hypothesis, $|\langle M, p\rangle|^{c}=$ 1. $\left|\left\langle N, p_{1}\right\rangle\right|^{c}=1 .\left|\left\langle N, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle M, p^{\prime}\right\rangle\right|^{c}$. So $\left|\left\langle N, p_{1}\right\rangle\right|^{c}=\left|\left\langle N, p_{1}^{\prime}\right\rangle\right|^{c}$ and by IH, $p_{1}=p_{1}^{\prime}$ so $p=p^{\prime}$.
- Or $M \notin \mathcal{R}^{r}$ then $p=1 . p_{1}$ and $p^{\prime}=1 . p_{1}^{\prime}$ such that $p_{1}, p_{1} \in \mathcal{R}_{N}^{r}$. By hypothesis, $|\langle M, p\rangle|^{c}=$ 1. $\left|\left\langle N, p_{1}\right\rangle\right|^{c}=1 .\left|\left\langle N, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle M, p^{\prime}\right\rangle\right|^{c}$. So $\left|\left\langle N, p_{1}\right\rangle\right|^{c}=\left|\left\langle N, p_{1}^{\prime}\right\rangle\right|^{c}$ and by IH, $p_{1}=p_{1}^{\prime}$ so $p=p^{\prime}$.
- Let $M=P Q$ then by lemma 5.3:
- Either $M \in \mathcal{R}^{r}$, so $P$ is a $\lambda$-abstraction and:
* Either $p=p^{\prime}=0$ so it is done.
* Or $p=0$ and $p^{\prime}=1 . p_{1}^{\prime}$ such that $p_{1}^{\prime} \in \mathcal{R}_{P}^{r}$. Then $|\langle M, 0\rangle|^{c}=0 \neq\left|\left\langle M, p^{\prime}\right\rangle\right|^{c}=$ 1. $\left|\left\langle P, p_{1}^{\prime}\right\rangle\right|^{c}$.
* Or $p=0$ and $p^{\prime}=2 . p_{1}^{\prime}$ such that $p_{1}^{\prime} \in \mathcal{R}_{Q}^{r}$. Since $P$ is a $\lambda$-abstraction, $|\langle M, 0\rangle|^{c}=$ $0 \neq\left|\left\langle M, p^{\prime}\right\rangle\right|^{c}=2 .\left|\left\langle Q, p_{1}^{\prime}\right\rangle\right|^{c}$.
* Or $p=1 . p_{1}$ and $p^{\prime}=1 . p_{1}^{\prime}$ such that $p_{1}, p_{1}^{\prime} \in \mathcal{R}_{P}^{r}$. Since by hypothesis, $|\langle M, p\rangle|^{c}=$ 1. $\left|\left\langle P, p_{1}\right\rangle\right|^{c}=1 .\left|\left\langle P, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle M, p^{\prime}\right\rangle\right|^{c}$, then $\left|\left\langle P, p_{1}\right\rangle\right|^{c}=\left|\left\langle P, p_{1}^{\prime}\right\rangle\right|^{c}$. By IH, $p_{1}=p_{1}^{\prime}$ so $p=p^{\prime}$.
* Or $p=1 . p_{1}$ and $p^{\prime}=2 \cdot p_{1}^{\prime}$ such that $p_{1} \in \mathcal{R}_{P}^{r}$ and $p_{1}^{\prime} \in \mathcal{R}_{Q}^{r}$. Since $P$ is a $\lambda$-abstraction, $|\langle M, p\rangle|^{c}=1 .\left|\left\langle P, p_{1}\right\rangle\right|^{c} \neq 2 .\left|\left\langle Q, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle M, p^{\prime}\right\rangle\right|^{c}$.
* Or $p=2 . p_{1}$ and $p^{\prime}=2 . p_{1}^{\prime}$ such that $p_{1}, p_{1}^{\prime} \in \mathcal{R}_{Q}^{r}$. Since $P$ is a $\lambda$-abstraction, by hypothesis, $|\langle M, p\rangle|^{c}=2 .\left|\left\langle Q, p_{1}\right\rangle\right|^{c}=2 .\left|\left\langle Q, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle M, p^{\prime}\right\rangle\right|^{c}$ so $\left|\left\langle Q, p_{1}\right\rangle\right|^{c}=$ $\left|\left\langle Q, p_{1}^{\prime}\right\rangle\right|^{c}$. By IH, $p_{1}=p_{1}^{\prime}$ so $p=p^{\prime}$.
- Or $M \notin \mathcal{R}^{r}$, then:
* Or $p=1 . p_{1}$ and $p^{\prime}=1 . p_{1}^{\prime}$ such that $p_{1}, p_{1}^{\prime} \in \mathcal{R}_{P}^{r}$. Since by hypothesis, $|\langle M, p\rangle|^{c}=$ 1. $\left|\left\langle P, p_{1}\right\rangle\right|^{c}=1 .\left|\left\langle P, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle M, p^{\prime}\right\rangle\right|^{c}$, then $\left|\left\langle P, p_{1}\right\rangle\right|^{c}=\left|\left\langle P, p_{1}^{\prime}\right\rangle\right|^{c}$. By IH, $p_{1}=p_{1}^{\prime}$ so $p=p^{\prime}$.
* Or $p=1 . p_{1}$ and $p^{\prime}=2 . p_{1}^{\prime}$ such that $p_{1} \in \mathcal{R}_{P}^{r}$ and $p_{1}^{\prime} \in \mathcal{R}_{Q}^{r} . P=\neq c$, otherwise, by lemma 5.3, $\mathcal{R}_{P}^{r}=\varnothing$. Moreover, $|\langle M, p\rangle|^{c}=1 .\left|\left\langle P, p_{1}\right\rangle\right|^{c} \neq 2 .\left|\left\langle Q, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle M, p^{\prime}\right\rangle\right|^{c}$.
* Or $p=2 . p_{1}$ and $p^{\prime}=2 . p_{1}^{\prime}$ such that $p_{1}, p_{1}^{\prime} \in \mathcal{R}_{Q}^{r}$. If $P \neq c$ then, by hypothesis, $|\langle M, p\rangle|^{c}=2 .\left|\left\langle Q, p_{1}\right\rangle\right|^{c}=2 .\left|\left\langle Q, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle M, p^{\prime}\right\rangle\right|^{c}$ so $\left|\left\langle Q, p_{1}\right\rangle\right|^{c}=\left|\left\langle Q, p_{1}^{\prime}\right\rangle\right|^{c}$. By IH, $p_{1}=p_{1}^{\prime}$ so $p=p^{\prime}$. If $P=c$ then, by hypothesis, $|\langle M, p\rangle|^{c}=\left|\left\langle Q, p_{1}\right\rangle\right|^{c}=\left|\left\langle Q, p_{1}^{\prime}\right\rangle\right|^{c}=$ $\left|\left\langle M, p^{\prime}\right\rangle\right|^{c}$ so $\left|\left\langle Q, p_{1}\right\rangle\right|^{c}=\left|\left\langle Q, p_{1}^{\prime}\right\rangle\right|^{c}$. By IH, $p_{1}=p_{1}^{\prime}$ so $p=p^{\prime}$.

Proof(Lemma 5.8.2): We prove the statement by induction on the structure of $M$.

- Let $M \in \mathcal{V}$
- Let $M=x$ then $|M[x:=c(c x)]|^{c}=|c(c x)|^{c}=|x|^{c}$.
- Let $M=y \neq x$ then $|M[x:=c(c x)]|^{c}=|M|^{c}$.
- Let $M=\lambda y . N$ then $|M[x:=c(c x)]|^{c}=\lambda y .|N[x:=c(c x)]|^{c}={ }^{I H} \lambda y .|N|^{c}=|M|^{c}$, where $y \notin\{x, c\}$.
- Let $M=N P$.
- Either $N=c$, so $N[x:=c(c x)]=c$. Then, $|M[x:=c(c x)]|^{c}=|P[x:=c(c x)]|^{c}={ }^{I H}$ $|P|^{c}=|M|^{c}$.
- Or $N \neq c$, so $N[x:=c(c x)] \neq c$. Then, $|M[x:=c(c x)]|^{c}=|N[x:=c(c x)]|^{c} \mid P[x:=$ $c(c x)]\left.\right|^{c}={ }^{I H}|N|^{c}|P|^{c}=|M|^{c}$.

Proof(Lemma 5.8.3): We prove the statement by induction on the structure of $M$

- Let $M=y$ then by lemma 5.3, $\mathcal{R}_{M}^{\beta \eta}=\varnothing$.
- Let $M=\lambda y . N$. Then by lemma 5.3:
- Either $p=0$ if $M \in \mathcal{R}^{\beta \eta}$. Then, $|\langle M[x:=c(c x)], 0\rangle|^{c}=0=|\langle M, 0\rangle|^{c}$.
- Or $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{N}^{\beta \eta}$. Then $|\langle M[x:=c(c x)], p\rangle|^{c}=1 .\left|\left\langle N[x:=c(c x)], p^{\prime}\right\rangle\right|^{c}={ }^{I H}$ 1. $\left|\left\langle N, p^{\prime}\right\rangle\right|^{c}=|\langle M, p\rangle|^{c}$ such that $y \notin\{x, c\}$.
- Let $M=M_{1} M_{2}$. Then by lemma 5.3:
- Either $p=0$ if $M \in \mathcal{R}^{\beta \eta}$. Then, $|\langle M[x:=c(c x)], 0\rangle|^{c}=0=|\langle M, 0\rangle|^{c}$.
- Or $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{M_{1}}^{\beta \eta}$. Then $|\langle M[x:=c(c x)], p\rangle|^{c}=1 .\left|\left\langle M_{1}[x:=c(c x)], p^{\prime}\right\rangle\right|^{c}={ }^{I H}$ 1. $\left|\left\langle M_{1}, p^{\prime}\right\rangle\right|^{c}=|\langle M, p\rangle|^{c}$.
- Or $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{M_{2}}^{\beta \eta}$.
* If $M_{1}=c$ then $M_{1}[x:=c(c x)]=c$ and $|\langle M[x:=c(c x)], p\rangle|^{c}=\mid\left\langle M_{2}[x:=\right.$ $\left.c(c x)], p^{\prime}\right\rangle\left.\right|^{c}={ }^{I H}\left|\left\langle M_{2}, p^{\prime}\right\rangle\right|^{c}=|\langle M, p\rangle|^{c}$.
* If $M_{1} \neq c$ then $M_{1}[x:=c(c x)] \neq c$ and $|\langle M[x:=c(c x)], p\rangle|^{c}=2 . \mid\left\langle M_{2}[x:=\right.$ $\left.c(c x)], p^{\prime}\right\rangle\left.\right|^{c}={ }^{I H} 2 .\left|\left\langle M_{2}, p^{\prime}\right\rangle\right|^{c}=|\langle M, p\rangle|^{c}$.
$\operatorname{Proof}($ Lemma 5.8.4): We prove this lemma by induction on the structure of $M$.
- Let $M \in \mathcal{V} \backslash\{c\}$ then $|M|^{c}=M$ and $\mathrm{fv}(M) \backslash\{c\}=\{M\}=\mathrm{fv}\left(|M|^{c}\right)$.
- Let $M=\lambda y . P \in \Lambda \mathrm{I}_{c}$ such that $P \in \Lambda \mathrm{I}_{c}$ and $y \neq c$. - Let $M=c P \in \Lambda \eta_{c}$ such that $N \in \Lambda \eta_{c} .|M[x:=N]|^{c}=|P[x:=N]|^{c}={ }^{I H}|P|^{c}\left[x:=|N|^{c}\right]=$ $|M|^{c}\left[x:=|N|^{c}\right]$.

Proof(Lemma 5.8.6): We prove the lemma by induction on the structure of $M$.

- Let $M \in \mathcal{V} \backslash\{c\}$ then $|M|^{c}=M \in \mathcal{V} \backslash\{c\} \subseteq \Lambda \mathrm{I}$.
- let $M=\lambda x$. $N$ such that $N \in \Lambda \mathrm{I}_{c}$ and $x \in \mathrm{fv}(N)$ and $x \neq c$. Then $|M|^{c}=\lambda x .|N|^{c}$ and by IH $|N|^{c} \in \Lambda$ I. Since $x \in \operatorname{fv}(N)$, by lemma $4, x \in \operatorname{fv}\left(|N|^{c}\right)$, so $|M|^{c} \in \Lambda \mathrm{I}$.
- Let $M=c P Q$ such that $P, Q \in \Lambda \mathrm{I}_{c}$ then $|M|^{c}=|P|^{c}|Q|^{c}$ and by $\mathrm{IH},|P|^{c},|Q|^{c} \in \Lambda \mathrm{I}$, hence $|M|^{c} \in \Lambda \mathrm{I}$.
- Let $M=(\lambda x . P) Q$ such that $\lambda x . P, Q \in \Lambda \mathrm{I}_{c}$ then $|M|^{c}=|\lambda x \cdot P|^{c}|Q|^{c}$ and by $\mathrm{IH},|\lambda x \cdot P|^{c},|Q|^{c} \in$ $\Lambda \mathrm{I}$, hence $|M|^{c} \in \Lambda \mathrm{I}$.

Proof(Lemma 5.8.7a): Let $p \in \mathcal{R}_{M}^{r}$, then by definition, $\left.M\right|_{p} \in \mathcal{R}^{r}$. We prove the result by induction on the structure of $p$.

- Let $p=0$.
- Let $r=\beta I$ then $M=\left(\lambda x . M_{1}\right) M_{2}$ such that $x \in \operatorname{fv}\left(M_{1}\right)$ and $\lambda x . M_{1}, M_{2} \in \Lambda \mathrm{I}_{c}$ and $M^{\prime}=M_{1}\left[x:=M_{2}\right]$. By definition $M_{1} \in \Lambda_{c}, x \in \operatorname{fv}\left(M_{1}\right)$ and $x \neq c$. Then $|M|^{c}=$ $\left(\lambda x \cdot\left|M_{1}\right|^{c}\right)\left|M_{2}\right|^{c}$ and $\left|M^{\prime}\right|^{c}=\left|M_{1}\left[x:=M_{2}\right]\right|^{c}={ }^{5}\left|M_{1}\right|^{c}\left[x:=\left|M_{2}\right|^{c}\right]$. By lemma 4, $x \in \mathrm{fv}\left(\left|M_{1}\right|^{c}\right)$. So, $|M|^{c} \xrightarrow{0}_{\beta I}\left|M^{\prime}\right|^{c}$ and $|\langle M, 0\rangle|^{c}=0$.
- Let $r=\beta \eta$.
* Either $M=\left(\lambda x . M_{1}\right) M_{2}$ such that $\lambda x . M_{1}, M_{2} \in \Lambda \eta_{c}$ and $M^{\prime}=M_{1}\left[x:=M_{2}\right]$. By lemma 5.2, $M_{1} \in \Lambda \mathrm{I}_{c}$ and $x \neq c$. Then $|M|^{c}=\left(\lambda x .\left|M_{1}\right|^{c}\right)\left|M_{2}\right|^{c}$ and $\left|M^{\prime}\right|^{c}=$ $\left|M_{1}\left[x:=M_{2}\right]\right|^{c}={ }^{5}\left|M_{1}\right|^{c}\left[x:=\left|M_{2}\right|^{c}\right]$. So, $|M|^{c} \xrightarrow{0} \beta\left|M^{\prime}\right|^{c}$ and $|\langle M, 0\rangle|^{c}=0$.
* Or $M=\lambda x . M^{\prime} x$ such that $M^{\prime} x \in \Lambda \eta_{c}, x \notin \mathrm{fv}\left(M^{\prime}\right), x \neq c$ and $M^{\prime} \neq c$. Then $|M|^{c}=$ $\lambda x .\left|M^{\prime}\right|^{c} x$. By lemma 4, $x \in \mathrm{fv}\left(\left|M^{\prime}\right|^{c}\right)$. So, $|M|^{c} \xrightarrow{0}_{\beta}\left|M^{\prime}\right|^{c}$ and $|\langle M, 0\rangle|^{c}=0$.
- Let $p=1 . p^{\prime}$.
- Either $M=\lambda x \cdot M_{1}$ and $M^{\prime}=\lambda x . M_{1}^{\prime}$ such that $M_{1}{ }^{p^{\prime}}{ }_{r} M_{1}^{\prime}$. By lemma 5.3, $p^{\prime} \in \mathcal{R}_{M_{1}}^{r}$. By lemma 5.2, $M_{1} \in \mathcal{M}_{c}$ and $x \neq c$. By IH, $\left|M_{1}\right|^{c} \xrightarrow{p^{\prime \prime}}\left|M_{1}^{\prime}\right|^{c}$ such that $p^{\prime \prime}=\left|\left\langle M_{1}, p^{\prime}\right\rangle\right|^{c}$. So $|M|^{c} \xrightarrow{1 \cdot p^{\prime \prime}}{ }_{r}\left|M^{\prime}\right|^{c}$ and 1. $p^{\prime \prime}=|\langle M, p\rangle|^{c}$.
- Or $M=M_{1} M_{2}$ and $M^{\prime}=M_{1}^{\prime} M_{2}$ such that $M_{1} \xrightarrow{p^{\prime}}{ }_{r} M_{1}^{\prime}$. By lemma 5.3, $p^{\prime} \in \mathcal{R}_{M_{1}}^{r}$. By lemma 5.3, $M_{1} \neq c$. By lemma 5.2.5:
* Either $M_{1}=c M_{0}$ where $M_{0} \in \mathcal{M}_{c}$. By lemma 5.3, $p^{\prime}=2 . p_{0}^{\prime}$ such that $p_{0}^{\prime} \in \mathcal{R}_{M_{0}}^{r}$. So by definition $M_{1}^{\prime}=c M_{0}^{\prime}$ such that $M_{0} \xrightarrow{p_{0}^{\prime}} r M_{0}^{\prime}$. By IH, $\left|M_{0}\right|^{c} \xrightarrow{p_{0}^{\prime \prime}} r\left|M_{0}^{\prime}\right|^{c}$ such that $p_{0}^{\prime \prime}=\left|\left\langle M_{0}, p_{0}^{\prime}\right\rangle\right|^{c}$. Hence $|M|^{c} \xrightarrow{1 . p_{0}^{\prime \prime}} r\left|M^{\prime}\right|^{c}$ and $|\langle M, p\rangle|^{c}=\left|\left\langle c M_{0} M_{2}, 1.2 \cdot p_{0}^{\prime}\right\rangle\right|^{c}=$ 1. $\left|\left\langle c M_{0}, 2 . p_{0}^{\prime}\right\rangle\right|^{c}=1 .\left|\left\langle M_{0}, p_{0}^{\prime}\right\rangle\right|^{c}=1 . p_{0}^{\prime \prime}$
* Or $M_{1}=\lambda x . M_{0} \in \mathcal{M}_{c}$. By IH, $\left|M_{1}\right|^{c} \xrightarrow{p^{\prime \prime}}{ }_{r}\left|M_{1}^{\prime}\right|^{c}$ such that $p^{\prime \prime}=\left|\left\langle M_{1}, p^{\prime}\right\rangle\right|^{c}$. By lemma 2, $M_{1}^{\prime} \in \mathcal{M}_{c}$ and by lemma 5.2.3, $M_{1}^{\prime} \neq c$. So, $|M|^{c} \xrightarrow{1 \cdot p^{\prime \prime}}{ }_{r}\left|M^{\prime}\right|^{c}$ and $|\langle M, p\rangle|^{c}=1 .\left|\left\langle M_{1}, p^{\prime}\right\rangle\right|^{c}=1 . p^{\prime \prime}$.
- Let $p=2 . p^{\prime}$ then $M=M_{1} M_{2}$ and $M^{\prime}=M_{1} M_{2}^{\prime}$ such that $M_{2} \xrightarrow{p^{\prime}}{ }_{r} M_{2}^{\prime}$. By lemma 5.3, $p^{\prime} \in \mathcal{R}_{M_{2}}^{r}$. By lemma 5.2.5, $M_{2} \in \mathcal{M}_{c}$. By IH, $\left|M_{2}\right|^{c} \xrightarrow{p^{\prime \prime}}{ }_{r}\left|M_{2}^{\prime}\right|^{c}$ such that $p^{\prime \prime}=\left|\left\langle M_{2}, p^{\prime}\right\rangle\right|^{c}$.
- If $M_{1}=c$ then $|M|^{c} \xrightarrow{p^{\prime \prime}}{ }_{r}\left|M^{\prime}\right|^{c}$ and $|\langle M, p\rangle|^{c}=\left|\left\langle M_{2}, p^{\prime}\right\rangle\right|^{c}=p^{\prime \prime}$.
- Otherwise $|M|^{c} \xrightarrow{2 \cdot p^{\prime \prime}}{ }_{r}\left|M^{\prime}\right|^{c}$ and $|\langle M, p\rangle|^{c}=2 .\left|\left\langle M_{2}, p^{\prime}\right\rangle\right|^{c}=2 . p^{\prime \prime}$.
$\operatorname{Proof}\left(\right.$ Lemma 5.8.7b): $\quad$ The proof is by induction on the structure of $M_{1}$.
- Let $M_{1} \in \mathcal{V} \backslash\{c\}$. Then $M_{1}=\left|M_{1}\right|^{c}=\left|M_{2}\right|^{c}$. By lemma 4, $M_{2}=c^{n}\left(M_{1}\right)$.
- Either $M_{1}=x$, then $M_{1}\left[x:=N_{1}\right]=N_{1}$ and $M_{2}\left[x:=N_{2}\right]=c^{n}\left(N_{2}\right)$. By hypothesis $\left|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{r}\right\rangle\right|^{c}={ }^{2}\left|\left\langle c^{n}\left(N_{2}\right), \mathcal{R}_{c^{n}\left(N_{2}\right)}^{r}\right\rangle\right|^{c}$
- Or $M_{1}=y \neq x$ then $M_{1}\left[x:=N_{1}\right]=y$ and $M_{2}\left[x:=N_{2}\right]=c^{n}(y)$. We conclude using lemma 2.
- Let $M_{1}=\lambda y \cdot M_{1}^{\prime} \in \Lambda \mathrm{I}_{c}$ such that $y \in \mathrm{fv}\left(M_{1}^{\prime}\right), y \neq c$ and $M_{1}^{\prime} \in \Lambda \mathrm{I}_{c}$ then $\left|M_{1}\right|^{c}=\lambda y \cdot M_{1}^{\prime}=$ $\left|M_{2}\right|^{c}$. By lemma 4 and because $M_{2} \in \Lambda \mathrm{I}_{c}, M_{2}=\lambda y \cdot M_{2}^{\prime}, y \in \mathrm{fv}\left(M_{2}^{\prime}\right), M_{2}^{\prime} \in \Lambda \mathrm{I}_{c}$ and
$\left|M_{2}^{\prime}\right|^{c}=\left|M_{1}^{\prime}\right|^{c}$. By lemma 5.3, $\mathcal{R}_{M_{1}}^{\beta I}=\left\{1 . p \mid p \in \mathcal{R}_{M_{1}^{\prime}}^{\beta I}\right\}$ and $\mathcal{R}_{M_{2}}^{\beta I}=\left\{1 . p \mid p \in \mathcal{R}_{M_{2}^{\prime}}^{\beta I}\right\}$. So, $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta I}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta I}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta I}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{\beta I}\right\rangle\right|^{c}\right\}$.
Let $p \in\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta I}\right\rangle\right|^{c}$, then $1 . p \in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta I}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta I}\right\rangle\right|^{c}$. So $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{\beta I}\right\rangle\right|^{c}$, i.e. $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta I}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{\beta I}\right\rangle\right|^{c}$.
By IH, $\left|\left\langle M_{1}^{\prime}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}^{\prime}\left[x:=N_{1}\right]}^{\beta I^{\prime}}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}^{\prime}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}^{\prime}\left[x:=N_{2}\right]}^{\beta I}\right\rangle\right|^{c}$.
Since $M_{1}\left[x:=N_{1}\right]=\lambda y \cdot M_{1}^{\prime}\left[x:=N_{1}\right]$ and $M_{2}\left[x:=N_{2}\right]=\lambda y \cdot M_{2}^{\prime}\left[x:=N_{2}\right]$ where $y \notin$ $\operatorname{fv}\left(N_{1}\right) \cup \mathrm{fv}\left(N_{2}\right)$, by lemma 5.3, $\mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{\beta I}=\left\{1 . p \mid p \in \mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{\beta I}\right\}$ and $\mathcal{R}_{M_{2}\left[x:=N_{2}\right]}^{\beta I}=\{1 . p \mid$ $\left.p \in \mathcal{R}_{M_{2}^{\prime}\left[x:=N_{2}\right]}^{\beta I}\right\}$.
So $\left|\left\langle M_{1}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{\beta I}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle M_{1}^{\prime}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}^{\prime}\left[x:=N_{1}\right]}^{\beta I}\right\rangle\right|^{c}\right\}$ and $\mid\left\langle M_{2}[x:=\right.$ $\left.\left.N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right]}^{\beta I}\right\rangle\left.\right|^{c}=\left\{1 .\left.p|p \in|\left\langle M_{2}^{\prime}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}^{\prime}\left[x:=N_{2}\right]}^{\beta I}\right\rangle\right|^{c}\right\}$. Let $p \in \mid\left\langle M_{1}[x:=\right.$ $\left.\left.N_{1}\right], \mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{\beta I}\right\rangle\left.\right|^{c}$ then $p=1 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle M_{1}^{\prime}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}^{\prime}\left[x:=N_{1}\right\rangle}^{\beta I}\right\rangle\right|^{c} \subseteq \mid\left\langle M_{2}^{\prime}[x:=\right.$ $\left.\left.N_{2}\right], \mathcal{R}_{M_{2}^{\prime}\left[x:=N_{2}\right]}^{\beta I}\right\rangle\left.\right|^{c}$. So $p \in\left|\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right]}^{\beta I}\right\rangle\right|^{c}$.
- Let $M_{1}=\lambda y \cdot M_{1}^{\prime}[y:=c(c y)] \in \Lambda \eta_{c}$ such that $M_{1}^{\prime} \in \Lambda \eta_{c}$ and $y \neq c$, then $\left|M_{1}\right|^{c}=^{2} \lambda y .\left|M_{1}^{\prime}\right|^{c}$. Because $\left|M_{2}\right|^{c}=\lambda y \cdot\left|M_{1}^{\prime}\right|^{c}$, then by lemma 4, $M_{2}=c^{n}(\lambda y . P)$ such that $|P|^{c}=\left|M_{1}^{\prime}\right|^{c}$. By lemma 5.2.6, $\lambda y . P \in \Lambda \eta_{c}$. By lemma 5.2.12a, $P \in \Lambda \eta_{c}$. We prove the lemma by case on $\lambda y$. $P$.
- Either $\lambda y \cdot P=\lambda y \cdot M_{2}^{\prime}[y:=c(c y)]$ such that $M_{2}^{\prime} \in \Lambda \eta_{c}$. Hence $\left|M_{2}^{\prime}\right|^{c}={ }^{2} \mid M_{2}^{\prime}[y:=$ $c(c y)]\left.\right|^{c}=\left|M_{1}^{\prime}\right|^{c}$. We also have $\mathcal{R}_{M_{1}}^{\beta \eta}={ }^{5.4 .3}\left\{1 . p \mid p \in \mathcal{R}_{M_{1}^{\prime}[y:=c(c y)]}^{\beta \eta}\right\}={ }^{5.4 .4}\{1 . p \mid$ $\left.p \in \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\}$ and $\mathcal{R}_{\lambda y . P}^{\beta \eta}={ }^{5.4 .3}\left\{1 . p \in \mathcal{R}_{M_{2}^{\prime}[y:=c(c y)]}^{\beta \eta}\right\}={ }^{5.4 .4}\left\{1 . p \mid p \in \mathcal{R}_{M_{2}^{\prime}}^{\beta \eta}\right\}$. So $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c}={ }^{3}\left\{1 .\left.p|p \in|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}\left|\left\langle\lambda y . P, \mathcal{R}_{\lambda y . P}^{\beta \eta}\right\rangle\right|^{c}={ }^{3}$ $\left\{1 .\left.p|p \in|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$ then 1. $p \in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta \eta}\right\rangle\right|^{c}$, so $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$, i.e. $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$.
By IH, $\left|\left\langle M_{1}^{\prime}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}^{\prime}\left[x:=N_{1}\right]}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}^{\prime}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}^{\prime}\left[x:=N_{2}\right]}^{\beta \eta}\right\rangle\right|^{c}$.
Because $M_{1}\left[x:=N_{1}\right]=\lambda y \cdot M_{1}^{\prime}[y:=c(c y)]\left[x:=N_{1}\right]=\lambda y \cdot M_{1}^{\prime}\left[x:=N_{1}\right][y:=$ $c(c y)]$ and $(\lambda y \cdot P)\left[x:=N_{2}\right]=\lambda y \cdot M_{2}^{\prime}[y:=c(c y)]\left[x:=N_{2}\right]=\lambda y \cdot M_{2}^{\prime}\left[x:=N_{2}\right][y:=$ $c(c y)]$ such that $y \notin \operatorname{fv}\left(N_{1}\right) \cup \mathrm{fv}\left(N_{2}\right) \cup\{x\}$, we obtain $\mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{\beta \eta}=^{5.4 .3}\{1 . p \mid p \in$ $\left.\mathcal{R}_{M_{1}^{\prime}\left[x:=N_{1}\right][y:=c(c y)]}^{\beta \eta}\right\}=^{5.4 .4}\left\{1 . p \mid p \in \mathcal{R}_{M_{1}^{\prime}\left[x:=N_{1}\right]}^{\beta \eta}\right\}$ and $\mathcal{R}_{(\lambda y . P)\left[x:=N_{2}\right]}^{\beta \eta}=^{5.4 .3}\{1 . p \mid p \in$ $\left.\mathcal{R}_{M_{2}^{\prime}\left[x:=N_{2}\right][y:=c(c y)]}^{\beta \eta}\right\}=^{5.4 .4}\left\{1 . p \mid p \in \mathcal{R}_{M_{2}^{\prime}\left[x:=N_{2}\right]}^{\beta \eta}\right\}$.
So $\left|\left\langle M_{1}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{\beta \eta}\right\rangle\right|^{c}={ }^{3}\left\{1 .\left.p|p \in|\left\langle M_{1}^{\prime}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}^{\prime}\left[x:=N_{1}\right]}^{\beta \eta}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right]}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}\left|\left\langle(\lambda y . P)\left[x:=N_{2}\right], \mathcal{R}_{(\lambda y . P)\left[x:=N_{2}\right]}^{\beta \eta}\right\rangle\right|^{c}={ }^{3}\{1 . p \mid p \in$ $\left.\left|\left\langle M_{2}^{\prime}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}^{\prime}\left[x:=N_{2}\right]}^{\beta \eta}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle M_{1}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{\beta I}\right\rangle\right|^{c}$ then $p=1 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle M_{1}^{\prime}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}^{\prime}\left[x:=N_{1}\right]}^{\beta I}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}^{\prime}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}^{\prime}\left[x:=N_{2}\right]}^{\beta I}\right\rangle\right|^{c}$. Hence, $p \in\left|\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right]}^{\beta I}\right\rangle\right|^{c}$.
- Let $\lambda y \cdot P=\lambda y \cdot M_{2}^{\prime} y$ such that $P=M_{2}^{\prime} y \in \Lambda \eta_{c}, y \notin \operatorname{fv}\left(M_{2}^{\prime}\right)$ and $M_{2}^{\prime} \neq c$. So we
have $\left|M_{2}^{\prime} y\right|^{c}=\left|M_{1}^{\prime}\right|^{c}$. We already showed that $\mathcal{R}_{M_{1}}^{\beta \eta}=\left\{1 . p \mid p \in \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\}$. Since $\lambda y . P \in \mathcal{R}^{\beta \eta}$, by lemma 5.3, $\mathcal{R}_{\lambda y . P}^{\beta \eta}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{M_{2}^{\prime} y}^{\beta \eta}\right\}$. So $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c}={ }^{3}$ $\left\{1 .\left.p|p \in|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}\left|\left\langle\lambda y . P, \mathcal{R}_{\lambda y . P}^{\beta \eta}\right\rangle\right|^{c}=\{0\} \cup\{1 . p \mid p \in$ $\left.\left|\left\langle M_{2}^{\prime} y, \mathcal{R}_{M_{2}^{\prime} y}^{\beta \eta}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$ then 1. $p \in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta \eta}\right\rangle\right|^{c}$, so $p \in\left|\left\langle M_{2}^{\prime} y, \mathcal{R}_{M_{2}^{\prime} y}^{\beta \eta}\right\rangle\right|^{c}$, i.e. $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}^{\prime} y, \mathcal{R}_{M_{2}^{\prime} y}^{\beta \eta}\right\rangle\right|^{c}$.
By IH, $\left|\left\langle M_{1}^{\prime}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}^{\prime}\left[x:=N_{1}\right]}^{\beta \eta}\right\rangle\right|^{c}=\left|\left\langle\left(M_{2}^{\prime} y\right)\left[x:=N_{2}\right], \mathcal{R}_{\left(M_{2}^{\prime} y\right)\left[x:=N_{2}\right]}^{\beta \eta}\right\rangle\right|^{c}$.
Because $M_{1}\left[x:=N_{1}\right]=\lambda y \cdot M_{1}^{\prime}[y:=c(c y)]\left[x:=N_{1}\right]=\lambda y \cdot M_{1}^{\prime}\left[x:=N_{1}\right][y:=$ $c(c y)],(\lambda y . P)\left[x:=N_{2}\right]=\lambda y .\left(M_{2}^{\prime} y\right)\left[x:=N_{2}\right]=\lambda y \cdot M_{2}^{\prime}\left[x:=N_{2}\right] y$ such that $y \notin$ $\operatorname{fv}\left(N_{1}\right) \cup \operatorname{fv}\left(N_{2}\right) \cup\{x\}$, we obtain $(\lambda y . P)\left[x:=N_{2}\right] \in \mathcal{R}^{\beta \eta}, \mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{\beta \eta}={ }^{5.4 .3}\{1 . p \mid p \in$ $\left.\mathcal{R}_{M_{1}^{\prime}\left[x:=N_{1}\right][y:=c(c y)]}^{\beta \eta}\right\}=^{5.4 .4}\left\{1 . p \mid p \in \mathcal{R}_{M_{1}^{\prime}\left[x:=N_{1}\right]}^{\beta \eta}\right\}$ and $\mathcal{R}_{(\lambda y . P)\left[x:=N_{2}\right]}^{\beta \eta}=\{0\} \cup\{1 . p \mid$ $\left.p \in \mathcal{R}_{\left(M_{2}^{\prime} y\right)\left[x:=N_{2}\right]}^{\beta \eta}\right\}$.
So $\left|\left\langle M_{1}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{\beta \eta}\right\rangle\right|^{c}={ }^{3}$ $\left\{1 .\left.p|p \in|\left\langle M_{1}^{\prime}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}^{\prime}\left[x:=N_{1}\right]}^{\beta \eta}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right\rangle}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}\left|\left\langle(\lambda y . P)\left[x:=N_{2}\right], \mathcal{R}_{(\lambda y . P)\left[x:=N_{2}\right]}^{\beta \eta}\right\rangle\right|^{c}=\{0\} \cup\{1 . p \mid p \in$ $\left.\left|\left\langle\left(M_{2}^{\prime} y\right)\left[x:=N_{2}\right], \mathcal{R}_{\left(M_{2}^{\prime} y\right)\left[x:=N_{2}\right]}^{\beta \eta}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle M_{1}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}\left[x:=N_{1}\right\rangle}^{\beta I}\right\rangle\right|^{c}$ then $p=1 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle M_{1}^{\prime}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}^{\prime}\left[x:=N_{1}\right]}^{\beta I}\right\rangle\right|^{c} \subseteq\left|\left\langle\left(M_{2}^{\prime} y\right)\left[x:=N_{2}\right], \mathcal{R}_{\left(M_{2}^{\prime} y\right)\left[x:=N_{2}\right]}^{\beta I}\right\rangle\right|^{c}$. So $p \in\left|\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right]}^{\beta I}\right\rangle\right|^{c}$.
- Let $M_{1}=\lambda y \cdot M_{1}^{\prime} y \in \Lambda \eta_{c}$ such that $M_{1}^{\prime} y \in \Lambda \eta_{c}, M_{1}^{\prime} \neq c$ and $y \notin \operatorname{fv}\left(M_{1}^{\prime}\right) \cup\{c\}$, then $\left|M_{1}\right|^{c}=$ $\lambda y .\left|M_{1}^{\prime} y\right|^{c}$. Because $\left|M_{2}\right|^{c}=\lambda y \cdot\left|M_{1}^{\prime} y\right|^{c}$, then by lemma 4, $M_{2}=c^{n}(\lambda y \cdot P)$ such that $|P|^{c}=$ $\left|M_{1}^{\prime} y\right|^{c}$. By lemma 5.2.6, $\lambda y . P \in \Lambda \eta_{c}$. By lemma 5.2.12a, $P \in \Lambda \eta_{c}$. We prove the lemma by case on $\lambda y$. $P$.
- Either $\lambda y \cdot P=\lambda y \cdot M_{2}^{\prime}[y:=c(c y)]$ such that $M_{2}^{\prime} \in \Lambda \eta_{c}$. Since $M_{1} \in \mathcal{R}^{\beta \eta}, \mathcal{R}_{M_{1}}^{\beta \eta}={ }^{5.3}\{0\} \cup$ $\left\{1 . p \mid p \in \mathcal{R}_{M_{1}^{\prime} y}^{\beta \eta}\right\}$. Moreover, $\mathcal{R}_{\lambda y . P}^{\beta \eta}=^{5.4 .3}\left\{1 . p \mid p \in \mathcal{R}_{M_{2}^{\prime}[y:=c(c y)]}^{\beta \eta}\right\}$, so $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c}=$ $\{0\} \cup\left\{1 .\left.p|p \in|\left\langle M_{1}^{\prime} y, \mathcal{R}_{\left.M_{1}^{\prime}\right\rangle}^{\beta \eta}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}\left|\left\langle\lambda y . P, \mathcal{R}_{\lambda y . P}^{\beta \eta}\right\rangle\right|^{c}=\{1 . p \mid p \in$ $\left.\left|\left\langle M_{2}^{\prime}[y:=c(c y)], \mathcal{R}_{M_{2}^{\prime}[y:=c(c y)]}^{\beta \eta}\right\rangle\right|^{c}\right\}$. We have $0 \in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c}$ but $0 \notin\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta \eta}\right\rangle\right|^{c}$.
- Or $\lambda y \cdot P=\lambda y \cdot M_{2}^{\prime} y$ such that $M_{2}^{\prime} y \in \Lambda \eta_{c}, y \notin \mathrm{fv}\left(M_{2}^{\prime}\right) \cup\{x\}$ and $M_{2}^{\prime} \neq c$. So we have $\left|M_{2}^{\prime} y\right|^{c}=\left|M_{1}^{\prime} y\right|^{c}$. Because $M_{1}, \lambda y . P \in \mathcal{R}^{\beta \eta}$, by lemma 5.3, $\mathcal{R}_{M_{1}}^{\beta \eta}=\{0\} \cup\{1 . p \mid$ $\left.p \in \mathcal{R}_{M_{1}^{\prime} y}^{\beta \eta}\right\}$ and $\mathcal{R}_{\lambda y . P}^{\beta \eta}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{M_{2}^{\prime} y}^{\beta \eta}\right\}$. So $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c}=\{0\} \cup\{1 . p \mid p \in$ $\left.\left|\left\langle M_{1}^{\prime} y, \mathcal{R}_{M_{1}^{\prime} y}^{\beta \eta}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}\left|\left\langle\lambda y . P, \mathcal{R}_{\lambda y \cdot P}^{\beta \eta}\right\rangle\right|^{c}=\{0\} \cup\left\{1 .\left.p|p \in|\left\langle M_{2}^{\prime} y, \mathcal{R}_{M_{2}^{\prime} y}^{\beta \eta}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle M_{1}^{\prime} y, \mathcal{R}_{M_{1}^{\prime} y}^{\beta \eta}\right\rangle\right|^{c}$ then 1. $p \in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta \eta}\right\rangle\right|^{c}$, so $p \in\left|\left\langle M_{2}^{\prime} y, \mathcal{R}_{M_{2}^{\prime} y}^{\beta \eta}\right\rangle\right|^{c}$, i.e. $\left|\left\langle M_{1}^{\prime} y, \mathcal{R}_{M_{1}^{\prime} y}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}^{\prime} y, \mathcal{R}_{M_{2}^{\prime} y}^{\beta \eta}\right\rangle\right|^{c}$. By IH, $\mid\left.\left\langle\left(M_{1}^{\prime} y\right)\left[x:=N_{1}\right]\right.$, $\left.\mathcal{R}_{\left(M_{1}^{\prime} y\right)\left[x:=N_{1}\right]}^{\beta \eta}\right\rangle\right|^{c}=$ $\left|\left\langle\left(M_{2}^{\prime} y\right)\left[x:=N_{2}\right], \mathcal{R}_{\left(M_{2}^{\prime} y\right)\left[x:=N_{2}\right]}^{\beta \eta}\right\rangle\right|^{c}$.
Because $M_{1}\left[x:=N_{1}\right]=\lambda y \cdot\left(M_{1}^{\prime} y\right)\left[x:=N_{1}\right]=\lambda y \cdot M_{1}^{\prime}\left[x:=N_{1}\right] y,(\lambda y \cdot P)\left[x:=N_{2}\right]=$ $\lambda y$. $\left(M_{2}^{\prime} y\right)\left[x:=N_{2}\right]=\lambda y \cdot M_{2}^{\prime}\left[x:=N_{2}\right] y$ and $y \notin \mathrm{fv}\left(N_{1}\right) \cup \mathrm{fv}\left(N_{2}\right)$ such that $y \notin \mathrm{fv}\left(N_{1}\right) \cup$ $\operatorname{fv}\left(N_{2}\right) \cup\{x\}$, we have $M_{1}\left[x:=N_{1}\right],(\lambda y \cdot P)\left[x:=N_{2}\right] \in \mathcal{R}^{\beta \eta}, \mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{\beta \eta}=\{0\} \cup$
$\left\{1 . p \mid p \in \mathcal{R}_{\left(M_{1}^{\prime} y\right)\left[x:=N_{1}\right]}^{\beta \eta}\right\}$ and $\mathcal{R}_{M_{2}\left[x:=N_{2}\right]}^{\beta \eta}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{\left(M_{2}^{\prime} y\right)\left[x:=N_{2}\right]}^{\beta \eta}\right\}$. So $\left|\left\langle M_{1}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{\beta \eta}\right\rangle\right|^{c}=\{0\} \cup\left\{1 .\left.p|p \in|\left\langle\left(M_{1}^{\prime} y\right)\left[x:=N_{1}\right], \mathcal{R}_{\left(M_{1}^{\prime} y\right)\left[x:=N_{1}\right]}^{\beta \eta}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right]}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}\left|\left\langle(\lambda y \cdot P)\left[x:=N_{2}\right], \mathcal{R}_{(\lambda y . P)\left[x:=N_{2}\right]}^{\beta \eta}\right\rangle\right|^{c}=\{0\} \cup\{1 . p \mid$ $\left.p \in\left|\left\langle\left(M_{2}^{\prime} y\right)\left[x:=N_{2}\right], \mathcal{R}_{\left(M_{2}^{\prime} y\right)\left[x:=N_{2}\right]}^{\beta \eta}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle M_{1}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{\beta I}\right\rangle\right|^{c}$ then either $p=0 \in\left|\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right]}^{\beta \eta}\right\rangle\right|^{c}$ or $p=1 . p^{\prime}$ such that $p^{\prime} \in \mid\left\langle\left(M_{1}^{\prime} y\right)[x:=\right.$ $\left.\left.N_{1}\right], \mathcal{R}_{\left(M_{1}^{\prime} y\right)\left[x:=N_{1}\right]}^{\beta I}\right\rangle\left.\right|^{c} \subseteq\left|\left\langle\left(M_{2}^{\prime} y\right)\left[x:=N_{2}\right], \mathcal{R}_{\left(M_{2}^{\prime} y\right)\left[x:=N_{2}\right]}^{\beta I}\right\rangle\right|^{c}$.
So $p \in\left|\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right]}^{\beta I}\right\rangle\right|^{c}$.
- Let $M_{1}=c P_{1} Q_{1} \in \mathcal{M}_{c}$ such that $P_{1}, Q_{2} \in \mathcal{M}_{c}$ then $\left|M_{1}\right|^{c}=\left|P_{1}\right|^{c}\left|Q_{1}\right|^{c}=\left|M_{2}\right|^{c}$. Note that $M_{1} \notin \mathcal{R}^{r}$. Because $\left|M_{2}\right|^{c}=\left|P_{1}\right|^{c}\left|Q_{1}\right|^{c}$, then by lemma 4, $M_{2}=c^{n}(P Q)$ such that $P \neq c$, $|P|^{c}=\left|P_{1}\right|^{c}$ and $|Q|^{c}=\left|Q_{1}\right|^{c}$. By lemma 5.2.6, $P Q \in \mathcal{M}_{c}$. We prove the lemma by case on $P Q$.
- Either $P, Q \in \mathcal{M}_{c}$ and $P$ is a $\lambda$-abstraction $\lambda y . P^{\prime}$. Because $P Q \in \mathcal{M}_{c}$, by lemma 1a, $P Q=$ $\left(\lambda y . P^{\prime}\right) Q \in \mathcal{R}^{r}$. By lemma 5.3, $\mathcal{R}_{M_{1}}^{r}=\left\{1.2 . p \mid p \in \mathcal{R}_{P_{1}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{1}}^{r}\right\}$ and $\mathcal{R}_{P Q}^{r}=$ $\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{P}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q}^{r}\right\}$. So $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c}\right\} \cup$ $\left\{2 .\left.p|p \in|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}={ }^{2}\left|\left\langle P Q, \mathcal{R}_{P Q}^{r}\right\rangle\right|^{c}=\{0\} \cup\{1 . p \mid p \in$ $\left.\left|\left\langle P, \mathcal{R}_{P}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q, \mathcal{R}_{Q}^{r}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c}$ then 1. $p \in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c} \subseteq$ $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle P, \mathcal{R}_{P}^{r}\right\rangle\right|^{c}$, i.e. $\left|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle P, \mathcal{R}_{P}^{r}\right\rangle\right|^{c}$. Let $p \in\left|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c}$ then 2.p $\in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle Q, \mathcal{R}_{Q}^{r}\right\rangle\right|^{c}$, i.e. $\left|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c} \subseteq$ $\left|\left\langle Q, \mathcal{R}_{Q}^{r}\right\rangle\right|^{c}$. By IH, $\left|\left\langle P_{1}\left[x:=N_{1}\right], \mathcal{R}_{P_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle P\left[x:=N_{2}\right], \mathcal{R}_{P\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}$ and $\left|\left\langle Q_{1}\left[x:=N_{1}\right], \mathcal{R}_{Q_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle Q\left[x:=N_{2}\right], \mathcal{R}_{Q\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}$.
Because $M_{1}\left[x:=N_{1}\right]=c P_{1}\left[x:=N_{1}\right] Q_{1}\left[x:=N_{1}\right]$ and $(P Q)\left[x:=N_{2}\right]=\left(\lambda y \cdot P^{\prime}[x:=\right.$ $\left.\left.N_{2}\right]\right) Q\left[x:=N_{2}\right] \epsilon^{5.2 .10} \mathcal{M}_{c}$ such that $y \notin \mathrm{fv}\left(N_{2}\right)$, we obtain $M_{1}\left[x:=N_{1}\right] \notin \mathcal{R}^{r}$ and $(P Q)\left[x:=N_{2}\right] \in^{1 a} \mathcal{R}^{r}$. So by lemma 5.3 we have $\mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{r}=\{1.2 . p \mid p \in$ $\left.\mathcal{R}_{P_{1}\left[x:=N_{1}\right]}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{1}\left[x:=N_{1}\right]}^{r}\right\}$ and $\mathcal{R}_{(P Q)\left[x:=N_{2}\right]}^{r}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{P\left[x:=N_{2}\right]}^{r}\right\} \cup$ $\left\{2 . p \mid p \in \mathcal{R}_{Q\left[x:=N_{2}\right]}^{r}\right\}$.
So $\left|\left\langle M_{1}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle P_{1}\left[x:=N_{1}\right], \mathcal{R}_{P_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c}\right\} \cup\{2 . p \mid$ $\left.p \in\left|\left\langle Q_{1}\left[x:=N_{1}\right], \mathcal{R}_{Q_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}={ }^{2} \mid\langle(P Q)[x:=$ $\left.\left.N_{2}\right], \mathcal{R}_{(P Q)\left[x:=N_{2}\right]}^{r}\right\rangle\left.\right|^{c}=\{0\} \cup\left\{1 .\left.p|p \in|\left\langle P\left[x:=N_{2}\right], \mathcal{R}_{P\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}\right\} \cup\{2 . p|p \in|\langle Q[x:=$ $\left.\left.\left.N_{2}\right], \mathcal{R}_{Q\left[x:=N_{2}\right]}^{r}\right\rangle\left.\right|^{c}\right\}$. Let $p \in \mid\left.\left\langle M_{1}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}\left[x:=N_{1}\right\rangle}^{r}\right|\right|^{c}$ then either $p=1$. $p^{\prime}$ such that $p^{\prime} \in\left|\left\langle P_{1}\left[x:=N_{1}\right], \mathcal{R}_{P_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c} \subseteq \mid\left.\left\langle P\left[x:=N_{2}\right], \mathcal{R}_{P\left[x:=N_{2}\right]}^{r}\right|\right|^{c}$. So $p \in \mid\left\langle M_{2}[x:=\right.$ $\left.N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right\rangle}^{r}| |^{c}$. Or $p=2 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle Q_{1}\left[x:=N_{1}\right], \mathcal{R}_{Q_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c} \subseteq \mid\langle Q[x:=$ $\left.\left.N_{2}\right], \mathcal{R}_{Q\left[x:=N_{2}\right]}^{r}\right\rangle\left.\right|^{c}$. So $p \in\left|\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}$.
- Or $P=c P^{\prime}$ such that $P^{\prime}, Q \in \mathcal{M}_{c}$, then $|P|^{c}=\left|P^{\prime}\right|^{c}=\left|P_{1}\right|^{c}$. Since $M_{1}, P Q \notin \mathcal{R}^{r}$, by lemma 5.3, $\mathcal{R}_{M_{1}}^{r}=\left\{1.2 . p \mid p \in \mathcal{R}_{P_{1}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{1}}^{r}\right\}$ and $\mathcal{R}_{P Q}^{r}=\left\{1.2 . p \mid p \in \mathcal{R}_{P^{\prime}}^{r}\right\} \cup$ $\left\{2 . p \mid p \in \mathcal{R}_{Q}^{r}\right\}$. So $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}={ }^{2}\left|\left\langle P Q, \mathcal{R}_{P Q}^{r}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle P^{\prime}, \mathcal{R}_{P^{\prime}}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q, \mathcal{R}_{Q}^{r}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c}$ then 1.p $\in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle P^{\prime}, \mathcal{R}_{P^{\prime}}^{r}\right\rangle\right|^{c}$, i.e. $\left|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle P^{\prime}, \mathcal{R}_{P^{\prime}}^{r}\right\rangle\right|^{c}$. Let $p \in\left|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c}$ then 2.p $\in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c} \subseteq$ $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle Q, \mathcal{R}_{Q}^{r}\right\rangle\right|^{c}$, i.e. $\left|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle Q, \mathcal{R}_{Q}^{r}\right\rangle\right|^{c}$. By IH, $\mid\left\langle P_{1}[x:=\right.$
$\left.\left.N_{1}\right], \mathcal{R}_{P_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\left.\right|^{c} \subseteq\left|\left\langle P^{\prime}\left[x:=N_{2}\right], \mathcal{R}_{P^{\prime}\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}$ and $\left|\left\langle Q_{1}\left[x:=N_{1}\right], \mathcal{R}_{Q_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c} \subseteq$ $\left|\left\langle Q\left[x:=N_{2}\right], \mathcal{R}_{Q\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}$.
Because $M_{1}\left[x:=N_{1}\right]=c P_{1}\left[x:=N_{1}\right] Q_{1}\left[x:=N_{1}\right]$ and $(P Q)\left[x:=N_{2}\right]=c P^{\prime}[x:=$ $\left.N_{2}\right] Q\left[x:=N_{2}\right]$, we obtain $M_{1}\left[x:=N_{1}\right],(P Q)\left[x:=N_{2}\right] \notin \mathcal{R}^{r}$. So by lemma 5.3 we have $\mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{r}=\left\{1.2 . p \mid p \in \mathcal{R}_{P_{1}\left[x:=N_{1}\right]}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{1}\left[x:=N_{1}\right]}^{r}\right\}$ and $\mathcal{R}_{(P Q)\left[x:=N_{2}\right]}^{r}=$ $\left\{1.2 . p \mid p \in \mathcal{R}_{P^{\prime}\left[x:=N_{2}\right]}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q\left[x:=N_{2}\right]}^{r}\right\}$. So $\left|\left\langle M_{1}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c}=$ $\left\{1 .\left.p|p \in|\left\langle P_{1}\left[x:=N_{1}\right], \mathcal{R}_{P_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q_{1}\left[x:=N_{1}\right], \mathcal{R}_{Q_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}={ }^{2}\left|\left\langle(P Q)\left[x:=N_{2}\right], \mathcal{R}_{(P Q)\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}=\{1 . p \mid p \in$ $\left.\left|\left\langle P^{\prime}\left[x:=N_{2}\right], \mathcal{R}_{P^{\prime}\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q\left[x:=N_{2}\right], \mathcal{R}_{Q\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}\right\}$.
Let $p \in\left|\left\langle M_{1}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c}$ then either $p=1 . p^{\prime}$ such that $p^{\prime} \in \mid\left\langle P_{1}[x:=\right.$ $\left.\left.N_{1}\right], \mathcal{R}_{P_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\left.\right|^{c} \subseteq\left|\left\langle P^{\prime}\left[x:=N_{2}\right], \mathcal{R}_{P^{\prime}\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right\rangle}^{r}\right\rangle\right|^{c}$. Or $p=2 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle Q_{1}\left[x:=N_{1}\right], \mathcal{R}_{Q_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle Q\left[x:=N_{2}\right], \mathcal{R}_{Q\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}$.
- Let $M_{1}=P_{1} Q_{1} \in \mathcal{M}_{c}$ such that $P_{1}, Q_{1} \in \mathcal{M}_{c}$ and $P_{1}$ is a $\lambda$-abstraction $\lambda y . P_{0}$. Then $\left|M_{1}\right|^{c}=$ $\left|P_{1}\right|^{c}\left|Q_{1}\right|^{c}$. Note that because $M_{1} \in \mathcal{M}_{c}$ then by lemma 1a, $M_{1} \in \mathcal{R}^{r}$. So by lemma 5.3, $0 \in \mathcal{R}_{M_{1}}^{r}$, so $0 \in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c}$. Because $\left|M_{2}\right|^{c}=\left|P_{1}\right|^{c}\left|Q_{1}\right|^{c}$, then by lemma 4, $M_{2}=c^{n}(P Q)$ such that $P \neq c,|P|^{c}=\left|P_{1}\right|^{c}$ and $|Q|^{c}=\left|Q_{1}\right|^{c}$. By lemma 5.2.6, $P Q \in \mathcal{M}_{c}$. We prove the lemma by case on $P Q$.
- Either $P=c P^{\prime}$ such that $P^{\prime}, Q \in \mathcal{M}_{c}$, so $P Q \notin \mathcal{R}^{r}$. Hence, by lemma 5.3, $\mathcal{R}_{P Q}^{r}=$ $\left\{1.2 . p \mid p \in \mathcal{R}_{P^{\prime}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q}^{r}\right\}$. So $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}={ }^{2}\left|\left\langle P Q, \mathcal{R}_{P Q}^{r}\right\rangle\right|^{c}=\{1 . p \mid p \in$ $\left.\left|\left\langle P^{\prime}, \mathcal{R}_{P^{\prime}}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q, \mathcal{R}_{Q}^{r}\right\rangle\right|^{c}\right\}$. Hence $0 \notin\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$.
- Or $P, Q \in \mathcal{M}_{c}$ and $P$ is a $\lambda$-abstraction $\lambda y \cdot P^{\prime}$. Because $P Q=\left(\lambda y \cdot P^{\prime}\right) Q \in \mathcal{M}_{c}$ then by lemma 1a, $P Q \in \mathcal{R}^{r}$. By lemma 5.3, $\mathcal{R}_{M_{1}}^{r}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{P_{1}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{1}}^{r}\right\}$ and $\mathcal{R}_{P Q}^{r}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{P}^{r}\right\} \cup\left\{2 . p \in \mathcal{R}_{Q}^{r}\right\}$. So, $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c}=\{0\} \cup\{1 . p \mid$ $\left.p \in\left|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}={ }^{2}\left|\left\langle P Q, \mathcal{R}_{P Q}^{r}\right\rangle\right|^{c}=$ $\{0\} \cup\left\{1 .\left.p|p \in|\left\langle P, \mathcal{R}_{P}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q, \mathcal{R}_{Q}^{r}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c}$ then 1. $p \in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle P, \mathcal{R}_{P}^{r}\right\rangle\right|^{c}$, i.e. $\left|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle P, \mathcal{R}_{P}^{r}\right\rangle\right|^{c}$. let $p \in\left|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c}$ then $2 . p \in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$. So, $p \in\left|\left\langle Q, \mathcal{R}_{Q}^{r}\right\rangle\right|^{c}$, i.e. $\mid\left.\left\langle Q_{1},\left.\mathcal{R}_{Q_{1}}^{r}\right|^{c} \subseteq\right|\left\langle Q, \mathcal{R}_{Q}^{r}\right\rangle\right|^{c}$.
By IH, $\left|\left\langle P_{1}\left[x:=N_{1}\right], \mathcal{R}_{P_{1}\left[x:=N_{1}\right\rangle}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle P\left[x:=N_{2}\right], \mathcal{R}_{P\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}$ and $\left|\left\langle Q_{1}\left[x:=N_{1}\right], \mathcal{R}_{Q_{1}\left[x:=N_{1}\right\rangle}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle Q\left[x:=N_{2}\right], \mathcal{R}_{Q\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}$.
By lemma 5.2.10, $M_{1}\left[x:=N_{1}\right] \in \mathcal{M}_{c}$ and by lemma 1a, $M_{1}\left[x:=N_{1}\right]=\left(\lambda y \cdot P_{0}[x:=\right.$ $\left.\left.N_{1}\right]\right) Q_{1}\left[x:=N_{1}\right] \in \mathcal{R}^{r}$. By lemma 5.2.10, $(P Q)\left[x:=N_{2}\right] \in \mathcal{M}_{c}$ and by lemma 1a, $(P Q)\left[x:=N_{2}\right]=\left(\lambda y \cdot P^{\prime}\left[x:=N_{2}\right]\right) Q\left[x:=N_{2}\right] \in \mathcal{R}^{r}$. So by lemma 5.3 we have $\mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{r}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{P_{1}\left[x:=N_{1}\right]}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{1}\left[x:=N_{1}\right]}^{r}\right\}$ and $\mathcal{R}_{(P Q)\left[x:=N_{2}\right]}^{r}=$ $\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{P\left[x:=N_{2}\right]}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q\left[x:=N_{2}\right]}^{r}\right\}$. So $\left|\left\langle M_{1}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c}=$ $\{0\}\left\{1 . p|p \in|\left\langle P_{1}\left[x:=N_{1}\right], \mathcal{R}_{P_{1}\left[x:=N_{1}\right]}^{r}\right\rangle| |^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q_{1}\left[x:=N_{1}\right], \mathcal{R}_{Q_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}==^{2}\left|\left\langle(P Q)\left[x:=N_{2}\right], \mathcal{R}_{(P Q)\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}=\{0\} \cup\{1 . p \mid$ $\left.p \in\left|\left\langle P\left[x:=N_{2}\right], \mathcal{R}_{P\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q\left[x:=N_{2}\right], \mathcal{R}_{Q\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}\right\}$. Let $p \in$ $\left|\left\langle M_{1}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c}$ then either $p=0 \in\left|\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}$. Or

$$
\begin{aligned}
& p=1 . p^{\prime} \text { such that } p^{\prime} \in\left|\left\langle P_{1}\left[x:=N_{1}\right], \mathcal{R}_{P_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle P\left[x:=N_{2}\right], \mathcal{R}_{P\left[x:=N_{2}\right\rangle}^{r}\right\rangle\right|^{c} \text {. So } p \in \\
& \left|\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right\rangle}^{r}\right\rangle\right|^{c} \text {. Or } p=2 . p^{\prime} \text { such that } p^{\prime} \in\left|\left\langle Q_{1}\left[x:=N_{1}\right], \mathcal{R}_{Q_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c} \subseteq \\
& \left|\left\langle Q\left[x:=N_{2}\right], \mathcal{R}_{Q\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c} \text {. So } p \in\left|\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c} .
\end{aligned}
$$

- Let $M_{1}=c M_{1}^{\prime} \in \Lambda \eta_{c}$ such that $M_{1}^{\prime} \in \Lambda \eta_{c}$. So $\left|M_{1}^{\prime}\right|^{c}=\left|M_{1}\right|^{c}$. By lemm 2, $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c}=$ $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$. By IH, $\left|\left\langle M_{1}^{\prime}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}^{\prime}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}$. Since $M_{1}\left[x:=N_{1}\right]=c M_{1}^{\prime}\left[x:=N_{1}\right]$ then by lemm 2, $\left|\left\langle M_{1}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{\beta \eta}\right\rangle\right|^{c}=\mid\left\langle M_{1}^{\prime}[x:=\right.$ $\left.N_{1}\right], \mathcal{R}_{M_{1}^{\prime}\left[x:=N_{1}\right]}^{\beta \eta}| |^{c}$. So $\left|\left\langle M_{1}\left[x:=N_{1}\right], \mathcal{R}_{M_{1}\left[x:=N_{1}\right]}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}\left[x:=N_{2}\right], \mathcal{R}_{M_{2}\left[x:=N_{2}\right]}^{r}\right\rangle\right|^{c}$.

Proof(Lemma 5.8.7c): $\quad$ By lemma $8, p_{1} \in \mathcal{R}_{M_{1}}^{r}$ and $p_{2} \in \mathcal{R}_{M_{2}}^{r}$. We prove this lemma by induction on the structure of $M_{1}$.

1. Let $M_{1} \in \mathcal{V} \backslash\{c\}$ then nothing to prove since $M_{1}$ does not reduce.
2. Let $M_{1}=\lambda x . N_{1} \in \Lambda \mathrm{I}_{c}$ such that $x \neq c$. So $\left|M_{1}\right|^{c}=\lambda x .\left|N_{1}\right|^{c}=\left|M_{2}\right|^{c}$. By lemma 4, because $M_{2} \in \Lambda \mathrm{I}_{c}$ and by lemma 5.2, $M_{2}=\lambda x . N_{2}$ and $\left|N_{2}\right|^{c}=\left|N_{1}\right|^{c}$. So $N_{2} \in \Lambda \mathrm{I}_{c}$. Since $M_{1}, M_{2} \notin \mathcal{R}^{\beta I}$, by lemma 5.3, $\mathcal{R}_{M_{1}}^{\beta I}=\left\{1 . p \mid p \in \mathcal{R}_{N_{1}}^{\beta I}\right\}$ and $\mathcal{R}_{M_{2}}^{\beta I}=\left\{1 . p \mid p \mathcal{R}_{N_{2}}^{\beta I}\right\}$ so $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta I}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{\beta I}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta I}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{\beta I}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{\beta I}\right\rangle\right|^{c}$ then 1. $p \in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta I}\right\rangle\right|^{c}$, so by hypothesis, 1. $p \in\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta I}\right\rangle\right|^{c}$. Hence, $p \in\left|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{\beta I}\right\rangle\right|^{c}$, i.e. $\left|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{\beta I}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{\beta I}\right\rangle\right|^{c}$. Since $p_{1} \in \mathcal{R}_{M_{1}}^{\beta I}$, $p_{1}=1 . p_{1}^{\prime}$ such that $p_{1}^{\prime} \in \mathcal{R}_{N_{1}}^{\beta I}$. Since $p_{2} \in \mathcal{R}_{M_{2}}^{\beta I}, p_{2}=1 . p_{2}^{\prime}$ such that $p_{2}^{\prime} \in \mathcal{R}_{N_{2}}^{\beta I}$. Since $\left|\left\langle M_{1}, p\right\rangle\right|^{c}=\left|\left\langle M_{2}, p\right\rangle\right|^{c}$ then $\left|\left\langle N_{1}, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle N_{2}, p_{2}^{\prime}\right\rangle\right|^{c}$. Hence, $M_{1}=\lambda x \cdot N_{1} \xrightarrow{p_{1}} \beta I \lambda x \cdot N_{1}^{\prime}=M_{1}^{\prime}$ such that $N_{1} \xrightarrow{p_{1}^{\prime}} \beta{ }_{\beta I} N_{1}^{\prime}$ and $M_{2}=\lambda x \cdot N_{2} \xrightarrow{p_{2}} \beta I \lambda x \cdot N_{2}^{\prime}=M_{2}^{\prime}$ such that $N_{2} \xrightarrow{p_{2}^{\prime}} \beta I N_{2}^{\prime}$. By IH, $\left|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta I}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta I}\right\rangle\right|^{c}$. By lemma 5.3, $\mathcal{R}_{M_{1}^{\prime}}^{\beta I}=\left\{1 . p \mid p \in \mathcal{R}_{N_{1}^{\prime}}^{\beta I}\right\}$ and $\mathcal{R}_{M_{2}^{\prime}}^{\beta I}=\left\{1 . p \mid p \in \mathcal{R}_{N_{2}^{\prime}}^{\beta I}\right\}$, so $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta I}\right\rangle\right|^{c}=$ $\left\{1 .\left.p|p \in|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta I}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{\beta I}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta I}\right\rangle\right|^{c}\right\}$. Let $p \in \mid\left\langle M_{1}^{\prime},\left.\mathcal{R}_{M_{1}^{\prime}}^{\beta I}\right|^{c}\right.$, then $p=1 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta I}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta I}\right\rangle\right|^{c}$, so $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{\beta I}\right\rangle\right|^{c}$.
3. Let $M_{1}=\lambda x . N_{1}[x:=c(c x)] \in \Lambda \eta_{c}$ such that $N_{1} \in \Lambda \eta_{c}$ and $x \neq c$ then $\left|M_{1}\right|^{c}=\lambda x . \mid N_{1}[x:=$ $c(c x)]\left.\right|^{c}={ }^{2} \lambda x \cdot\left|N_{1}\right|^{c}$. Because $\left|M_{2}\right|^{c}=\lambda x \cdot\left|N_{1}\right|^{c}$, then by lemma 4, $M_{2}=c^{n}(\lambda x . P)$ such that $|P|^{c}=\left|N_{1}\right|^{c}$. By lemma 5.2.6, $\lambda x . P \in \Lambda \eta_{c}$. We prove the lemma by case on $\lambda x . P$.

- Either $\lambda x \cdot P=\lambda x \cdot N_{2}[x:=c(c x)]$ such that $N_{2} \in \Lambda \eta_{c}$. Then,
$\left|N_{1}\right|^{c}=|P|^{c}=\left|N_{2}[x:=c(c x)]\right|^{c}={ }^{2}\left|N_{2}\right|^{c}$ and $\mathcal{R}_{M_{1}}^{\beta \eta}={ }^{5.4 .3}\left\{1 . p \mid p \in \mathcal{R}_{N_{1}[x:=c(c x)]}^{\beta \eta}\right\}==^{5.4 .4}$
$\left\{1 . p \mid p \in \mathcal{R}_{N_{1}}^{\beta \eta}\right\}$ and $\mathcal{R}_{\lambda x . P}^{\beta \eta}=^{5.4 .3}\left\{1 . p \mid p \in \mathcal{R}_{N_{2}[x:=c(c x)]}^{\beta \eta}\right\}=^{5.4 .4}\left\{1 . p \mid p \in \mathcal{R}_{N_{2}}^{\beta \eta}\right\}$. So, $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c}={ }^{3}\left\{1 .\left.p|p \in|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{\beta \eta}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}\left|\left\langle\lambda x . P, \mathcal{R}_{\lambda x . P}^{\beta \eta}\right\rangle\right|^{c}={ }^{3}$ $\left\{1 .\left.p|p \in|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{\beta \eta}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{\beta \eta}\right\rangle\right|^{c}$ then 1. $p \in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta \eta}\right\rangle\right|^{c}$, so $p \in\left|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{\beta \eta}\right\rangle\right|^{c}$, i.e. $\left|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{\beta \eta}\right\rangle\right|^{c}$. Because $p_{1} \in \mathcal{R}_{M_{1}}^{\beta \eta}$, we obtain $p_{1}=$ 1. $p_{1}^{\prime}$ such that $p_{1}^{\prime} \in \mathcal{R}_{N_{1}}^{\beta \eta}$. Because $p_{2} \in \mathcal{R}_{M_{2}}^{\beta \eta}$ and by lemma 5.4.5 we obtain $p_{2}=2^{n}$.1. $p_{2}^{\prime}$ such that $p_{2}^{\prime} \in \mathcal{R}_{N_{2}}^{\beta \eta}$. Because 1. $\left|\left\langle N_{1}, p_{1}^{\prime}\right\rangle\right|^{c}={ }^{3}\left|\left\langle M_{1}, p_{1}\right\rangle\right|^{c}=\left|\left\langle M_{2}, p_{2}\right\rangle\right|^{c}={ }^{3,3} 1 .\left|\left\langle N_{2}, p_{2}^{\prime}\right\rangle\right|^{c}$,
we obtain $\left|\left\langle N_{1}, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle N_{2}, p_{2}^{\prime}\right\rangle\right|^{c}$. So $M_{1}=\lambda x . N_{1}[x:=c(c x)]{ }^{p_{1}}{ }_{\beta \eta} \lambda x . P_{1}=M_{1}^{\prime}$ and $M_{2}=c^{n}\left(\lambda x \cdot N_{2}[x:=c(c x)]\right) \xrightarrow{p_{2}} \beta \eta c^{n}\left(\lambda x \cdot P_{2}\right)=M_{2}^{\prime}$ such that $N_{1}[x:=c(c x)] \xrightarrow{p_{1}^{\prime}} \beta \eta P_{1}$ and $N_{2}[x:=c(c x)] \stackrel{p_{2}^{\prime}}{{ }_{\beta \eta}} P_{2}$. By lemma 5.2.13a, $P_{1}=N_{1}^{\prime}[x:=c(c x)], P_{2}=N_{2}^{\prime}[x:=$ $c(c x)], N_{1}{\xrightarrow{p_{1}^{\prime}}}_{\beta \eta} N_{1}^{\prime}$ and $N_{2}{\xrightarrow{p_{2}^{\prime}}}_{\beta \eta} N_{2}^{\prime}$. By IH, $\left|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$. Hence, $\mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}=^{5.4 .3}\left\{1 . p \mid p \in \mathcal{R}_{N_{1}^{\prime}[x:=c(c x)]}^{\beta \eta}\right\}={ }^{5.4 .4}\left\{1 . p \mid p \in \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\}$ and $\mathcal{R}_{\lambda x . P_{2}}^{\beta \eta}={ }^{5.4 .3}$ $\left\{1 . p \in \mathcal{R}_{N_{2}^{\prime}[x:=c(c x)]}^{\beta \eta}\right\}=^{5.4 .4}\left\{1 . p \mid p \in \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\}$. So, $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}={ }^{3}\{1 . p \mid p \in$ $\left.\left|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}\right\}$ and $\mid\left.\left\langle M_{2}^{\prime},\left.\mathcal{R}_{M_{2}^{\prime}}^{\beta \eta}\right|^{c}={ }^{2}\right|\left\langle\lambda x . P_{2}, \mathcal{R}_{\lambda x . P_{2}}^{\beta \eta}\right\rangle\right|^{c}={ }^{3}\left\{1 .\left.p|p \in|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$ then $p=1 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$, so $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$, i.e. $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$.
- Let $\lambda x . P=\lambda x . N_{2} x$ such that $N_{2} x \in \Lambda \eta_{c}, x \notin \mathrm{fv}\left(N_{2}\right)$ and $N_{2} \neq c$, then $\lambda x . P \in \mathcal{R}^{\beta \eta}$, $\mathcal{R}_{M_{1}}^{\beta \eta}={ }^{5.4 .3}\left\{1 . p \mid p \in \mathcal{R}_{N_{1}[x:=c(c x)]}^{\beta \eta}\right\}={ }^{5.4 .4}\left\{1 . p \mid p \in \mathcal{R}_{N_{1}}^{\beta \eta}\right\}$ and $\mathcal{R}_{\lambda x . P}^{\beta \eta}={ }^{5.3}\{0\} \cup$ $\left\{1 . p \mid p \in \mathcal{R}_{N_{2} x}^{\beta \eta}\right\}$. By lemma 5.4.5, $\mathcal{R}_{\lambda x . P}^{\beta \eta}={ }^{5.3}\left\{2^{n} .0\right\} \cup\left\{2^{n}\right.$.1.p $\left.\mid p \in \mathcal{R}_{N_{2} x}^{\beta \eta}\right\}$. So, $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c}={ }^{3}\left\{1 .\left.p|p \in|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{\beta \eta}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}\left|\left\langle\lambda x . P, \mathcal{R}_{\lambda x . P}^{\beta \eta}\right\rangle\right|^{c}=$ $\{0\} \cup\left\{1 .\left.p|p \in|\left\langle N_{2} x, \mathcal{R}_{N_{2} x}^{\beta \eta}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{\beta \eta}\right\rangle\right|^{c}$ then 1.p $\in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c} \subseteq$ $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta \eta}\right\rangle\right|^{c}$, so $p \in\left|\left\langle N_{2} x, \mathcal{R}_{N_{2} x}^{\beta \eta}\right\rangle\right|^{c}$, i.e. $\left|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2} x, \mathcal{R}_{N_{2} x}^{\beta \eta}\right\rangle\right|^{c}$. Since $p_{1} \in$ $\mathcal{R}_{M_{1}}^{\beta \eta}, p_{1}=1 . p_{1}^{\prime}$ such that $p_{1}^{\prime} \in \mathcal{R}_{N_{1}}^{\beta \eta}$. Because $p_{2} \in \mathcal{R}_{M_{2}}^{\beta \eta}$ and $1 .\left|\left\langle N_{1}, p_{1}^{\prime}\right\rangle\right|^{c}={ }^{3}\left|\left\langle M_{1}, p_{1}\right\rangle\right|^{c}=$ $\left|\left\langle M_{2}, p_{2}\right\rangle\right|^{c}$, then $p_{2}=2^{n}$.1. $p_{2}^{\prime}$ such that $p_{2}^{\prime} \in \mathcal{R}_{N_{2} x}^{\beta \eta}$. Because 1. $\left|\left\langle N_{1}, p_{1}^{\prime}\right\rangle\right|^{c}={ }^{3}\left|\left\langle M_{1}, p_{1}\right\rangle\right|^{c}=$ $\left|\left\langle M_{2}, p_{2}\right\rangle\right|^{c}=^{3}\left|\left\langle\lambda x . N_{2} x, 1 . p_{2}^{\prime}\right\rangle\right|^{c}=1 .\left|\left\langle N_{2} x, p_{2}^{\prime}\right\rangle\right|^{c}$ then $\left|\left\langle N_{1}, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle N_{2} x, p_{2}^{\prime}\right\rangle\right|^{c}$. So $M_{1}=\lambda x \cdot N_{1}[x:=c(c x)]{\xrightarrow{p_{1}}}_{\beta \eta} \lambda x \cdot P_{1}=M_{1}^{\prime}$ and $M_{2}=c^{n}\left(\lambda x \cdot N_{2} x\right) \xrightarrow{p_{2}}{ }_{\beta \eta} c^{n}\left(\lambda x \cdot N_{2}^{\prime}\right)=$ $M_{2}^{\prime}$ such that $N_{1}[x:=c(c x)]{\xrightarrow{p_{1}^{\prime}}}_{\beta \eta} P_{1}$ and $N_{2} x{\xrightarrow{p_{2}^{\prime}}}_{\beta \eta} N_{2}^{\prime}$. By lemma 5.2.13a, $P_{1}=$ $N_{1}^{\prime}[x:=c(c x)]$, and $N_{1}{\xrightarrow{p_{1}^{\prime}}}_{\beta \eta} N_{1}^{\prime}$. By IH, $\left|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$. Moreover, $\mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}={ }^{5.4 .3}\left\{1 . p \mid p \in \mathcal{R}_{\left.N_{1}^{\prime} \mid x:=c(c x)\right]}^{\beta \eta}\right\}={ }^{5.4 .4}\left\{1 . p \mid p \in \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\}$ and $\mathcal{R}_{\lambda x . N_{2}^{\prime}}^{\beta \eta} \backslash\{0\}==^{5.3}$ $\left\{1 . p \mid p \in \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\}$. So, $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}={ }^{3}\left\{1 .\left.p|p \in|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c} \backslash$ $\{0\}={ }^{2}\left|\left\langle\lambda x . N_{2}^{\prime}, \mathcal{R}_{\lambda x . N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c} \backslash\{0\}=\left\{1 . p \in\left|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$ then $p=1 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$, so $p \in \mid\left\langle M_{2}^{\prime},\left.\mathcal{R}_{M_{2}^{\prime}}^{\beta \eta}\right|^{c} \backslash\{0\}\right.$, i.e. $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$.

4. Let $M_{1}=\lambda x . N_{1} x \in \Lambda \eta_{c}$ such that $N_{1} x \in \Lambda \eta_{c}, x \notin \mathrm{fv}\left(N_{1}\right) \cup\{c\}$ and $N_{1} \neq c$, then $M_{1} \in \mathcal{R}^{\beta \eta}$ and $\left|M_{1}\right|^{c}=\lambda x \cdot\left|N_{1} x\right|^{c}=\lambda x \cdot\left|N_{1}\right|^{c} x$. Because $\left|M_{2}\right|^{c}=\lambda x$. $\left|N_{1}\right|^{c} x$, then by lemma 4, $M_{2}=$ $c^{n}(\lambda x . P)$ such that $|P|^{c}=\left|N_{1}\right|^{c} x$. By lemma 5.2.6, $\lambda x . P \in \Lambda \eta_{c}$. We prove the lemma by case on $\lambda x$. $P$.
(a) Let $\lambda x . P=\lambda x . N_{2}[x:=c(c x)]$ such that $N_{2} \in \Lambda \eta_{c}$ then $\mathcal{R}_{M_{1}}^{\beta \eta}={ }^{5.3}\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{N_{1 x} x}^{\beta \eta}\right\}$ and $\mathcal{R}_{\lambda x . P}^{\beta \eta}={ }^{5.4 .3}\left\{1 . p \mid p \in \mathcal{R}_{N_{2}[x:=c(c x)]}^{\beta \eta}\right\}=^{5.4 .4}\left\{1 . p \mid p \in \mathcal{R}_{N_{2}}^{\beta \eta}\right\}$. So, $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c}=$ $\{0\} \cup\left\{1 .\left.p|p \in|\left\langle N_{1} x, \mathcal{R}_{N_{1} x}^{\beta \eta}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}\left|\left\langle\lambda x . P, \mathcal{R}_{\lambda x . P}^{\beta \eta}\right\rangle\right|^{c}={ }^{3}\{1 . p \mid p \in$ $\left.\left|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{\beta \eta}\right\rangle\right|^{c}\right\}$. Hence, $0 \in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c}$ but $0 \notin\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta \eta}\right\rangle\right|^{c}$.
(b) Let $\lambda x . P=\lambda x \cdot N_{2} x$ such that $N_{2} x \in \Lambda \eta_{c}, x \notin \operatorname{fv}\left(N_{2}\right)$ and $N_{2} \neq c$, then $M_{2} \in \mathcal{R}^{\beta \eta}$. Since $\left|M_{2}\right|^{c}=\lambda x \cdot\left|N_{2} x\right|^{c}=\lambda x \cdot\left|N_{2}\right|^{c} x,\left|N_{1} x\right|^{c}=\left|N_{2} x\right|^{c}$ and $\left|N_{1}\right|^{c}=\left|N_{2}\right|^{c}$. Moreover, $\mathcal{R}_{M_{1}}^{\beta \eta}={ }^{5.3}\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{N_{1} x}^{\beta \eta}\right\}, \mathcal{R}_{\lambda x . P}^{\beta \eta}={ }^{5.3}\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{N_{2} x}^{\beta \eta}\right\}$ and $\mathcal{R}_{M_{2}}^{\beta \eta}=5.4 .5$ $\left\{2^{n} . p \mid p \in \mathcal{R}_{\lambda x . P}^{\beta \eta}\right\}==^{5.3}\left\{2^{n} .0\right\} \cup\left\{2^{n}\right.$.1.p $\left.\mid p \in \mathcal{R}_{N_{2} x}^{\beta \eta}\right\}$. So, $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c}=\{0\} \cup$ $\left\{1 .\left.p|p \in|\left\langle N_{1} x, \mathcal{R}_{N_{1} x}^{\beta \eta}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}\left|\left\langle\lambda x . P, \mathcal{R}_{\lambda x . P}^{\beta \eta}\right\rangle\right|^{c}=\{0\} \cup\{1 . p \mid p \in$ $\left.\left|\left\langle N_{2} x, \mathcal{R}_{N_{2} x}^{\beta \eta}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle N_{1} x, \mathcal{R}_{N_{1} x}^{\beta \eta}\right\rangle\right|^{c}$ then 1. $p \in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta \eta}\right\rangle\right|^{c}$, so $p \in\left|\left\langle N_{2} x, \mathcal{R}_{N_{2} x}^{\beta \eta}\right\rangle\right|^{c}$, i.e. $\left|\left\langle N_{1} x, \mathcal{R}_{N_{1} x}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2} x, \mathcal{R}_{N_{2} x}^{\beta \eta}\right\rangle\right|^{c}$. Moreover, $\mathcal{R}_{N_{1} x}^{\beta \eta} \backslash\{0\}={ }^{5.3}$ $\left\{1 . p \mid p \in \mathcal{R}_{N_{1}}^{\beta \eta}\right\}$ and $\mathcal{R}_{N_{2} x}^{\beta \eta} \backslash\{0\}={ }^{5.3}\left\{1 . p \mid p \in \mathcal{R}_{N_{2}}^{\beta \eta}\right\}$, so $\left|\left\langle N_{1} x, \mathcal{R}_{N_{1} x}^{\beta \eta}\right\rangle\right|^{c} \backslash\{0\}=$ $\left\{1 .\left.p|p \in|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{\beta \eta}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle N_{2} x, \mathcal{R}_{N_{2} x}^{\beta \eta}\right\rangle\right|^{c} \backslash\{0\}=\left\{1 .\left.p|p \in|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{\beta \eta}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{\beta \eta}\right\rangle\right|^{c}$ then $1 . p \in\left|\left\langle N_{1} x, \mathcal{R}_{N_{1} x}^{\beta \eta}\right\rangle\right|^{c} \backslash\{0\} \subseteq\left|\left\langle N_{1} x, \mathcal{R}_{N_{1} x}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2} x, \mathcal{R}_{N_{2} x}^{\beta \eta}\right\rangle\right|^{c}$, so $p \in\left|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{\beta \eta}\right\rangle\right|^{c}$, i.e. $\left|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{\beta \eta}\right\rangle\right|^{c}$. Since $p_{1} \in \mathcal{R}_{M_{1}}^{\beta \eta}$ :

- Either $p_{1}=0$. Because $p_{2} \in \mathcal{R}_{M_{2}}^{\beta \eta}$ and $\left|\left\langle M_{1}, p_{1}\right\rangle\right|^{c}=\left|\left\langle M_{2}, p_{2}\right\rangle\right|^{c}$, we obtain $p_{2}=2^{n} .0$. So $M_{1} \xrightarrow{0}_{\beta \eta} N_{1}$ and $M_{2}=c^{n}\left(\lambda x . N_{2} x\right) \xrightarrow{p_{2}} \beta \eta c^{n}\left(N_{2}\right)$. It is done since $\left|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{\beta \eta}\right\rangle\right|^{c} \subseteq$ $\left|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}\left|\left\langle c^{n}\left(N_{2}\right), \mathcal{R}_{c^{n}\left(N_{2}\right)}^{\beta \eta}\right\rangle\right|^{c}$.
- Or $p_{1}=1$. $p_{1}^{\prime}$ such that $p_{1}^{\prime} \in \mathcal{R}_{N_{1} x}^{\beta \eta}$. Becasue $p_{2} \in \mathcal{R}_{M_{2}}^{\beta \eta}$ and $\left|\left\langle M_{1}, p_{1}\right\rangle\right|^{c}=\left|\left\langle M_{2}, p_{2}\right\rangle\right|^{c}$, we obtain $p_{2}=2^{n}$.1. $p_{2}^{\prime}$ such that $p_{2}^{\prime} \in \mathcal{R}_{N_{2} x}^{\beta \eta}$. Becasue 1. $\left|\left\langle N_{1} x, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle M_{1}, p_{1}\right\rangle\right|^{c}=$ $\left|\left\langle M_{2}, p_{2}\right\rangle\right|^{c}={ }^{3}\left|\left\langle\lambda x . N_{2} x, 1 . p_{2}^{\prime}\right\rangle\right|^{c}=1 .\left|\left\langle N_{2} x, p_{2}^{\prime}\right\rangle\right|^{c}$, we obtain $\left|\left\langle N_{1} x, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle N_{2} x, p_{2}^{\prime}\right\rangle\right|^{c}$. So $M_{1}=\lambda x \cdot N_{1} x \xrightarrow{p_{1}} \beta_{\eta} \lambda x \cdot N_{1}^{\prime}=M_{1}^{\prime}$ and $M_{2}=c^{n}\left(\lambda x \cdot N_{2} x\right) \xrightarrow{p_{2}} \beta_{\eta} c^{n}\left(\lambda x \cdot N_{2}^{\prime}\right)=M_{2}^{\prime}$ such that $N_{1} x{\xrightarrow{p_{1}^{\prime}}}_{\beta \eta} N_{1}^{\prime}$ and $N_{2} x{\xrightarrow{p_{2}^{\prime}}}_{\beta \eta} N_{2}^{\prime}$. By IH, $\left|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$.
- Either $N_{1} x \in \mathcal{R}^{\beta \eta}$, so $N_{1}=\lambda y . P_{1}$ and by lemma 5.3, $\mathcal{R}_{N_{1} x}^{\beta \eta}=\{0\} \cup\{1 . p \mid p \in$ $\left.\mathcal{R}_{N_{1}}^{\beta \eta}\right\}$. Because $\left|\left\langle N_{1} x, \mathcal{R}_{N_{1} x}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2} x, \mathcal{R}_{N_{2} x}^{\beta \eta}\right\rangle\right|^{c}$, we obtain $0 \in\left|\left\langle N_{2} x, \mathcal{R}_{N_{2} x}^{\beta \eta}\right\rangle\right|^{c}$. Hence, $0 \in \mathcal{R}_{N_{2} x}^{\beta \eta}$ and by lemma 5.3, $\mathcal{R}_{N_{2} x}^{\beta \eta}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{N_{2}}^{\beta \eta}\right\}$. Hence, $N_{2} x \in \mathcal{R}^{\beta \eta}$ and by lemma $4, N_{2}=\lambda y . P_{2}$ such that $\left|P_{1}\right|^{c}=\left|P_{2}\right|^{c}$.
* Either $p_{1}^{\prime}=0$. Because $\left|\left\langle N_{1} x, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle N_{2} x, p_{2}^{\prime}\right\rangle\right|^{c}$, we obtain $p_{2}^{\prime}=0$. So $M_{1}=$ $\lambda x .\left(\lambda y \cdot P_{1}\right) x \xrightarrow{p_{1}} \beta \eta \lambda x \cdot P_{1}[y:=x]=M_{1}^{\prime}$ and $M_{2}=c^{n}\left(\lambda x \cdot\left(\lambda y \cdot P_{2}\right) x\right) \xrightarrow{p_{2}} \beta \eta$ $c^{n}\left(\lambda x . P_{2}[y:=x]\right)=M_{2}^{\prime}$. Because $x \notin \mathrm{fv}\left(N_{1}\right) \cup \mathrm{fv}\left(N_{2}\right)$, we obtain $M_{1}^{\prime}=$ $N_{1}$ and $M_{2}^{\prime}=c^{n}\left(N_{2}\right)$. It is done since $\left|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}$ $\left|\left\langle c^{n}\left(N_{2}\right), \mathcal{R}_{c^{n}\left(N_{2}\right)}^{\beta \eta}\right\rangle\right|^{c}$.
* Let $p_{1}^{\prime}=1 . p_{1}^{\prime \prime}$ such that $p_{1}^{\prime \prime} \in \mathcal{R}_{N_{1}}^{\beta \eta}$. Because $\left|\left\langle N_{1} x, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle N_{2} x, p_{2}^{\prime}\right\rangle\right|^{c}$, we obtain $p_{2}^{\prime}=1 . p_{2}^{\prime \prime}$ such that $p_{2}^{\prime \prime} \in \mathcal{R}_{N_{2}}^{\beta \eta}$. So $M_{1}=\lambda x \cdot N_{1} x \xrightarrow{p_{1}}{ }_{\beta \eta} \lambda x \cdot N_{1}^{\prime \prime} x=M_{1}^{\prime}$ and $M_{2}=c^{n}\left(\lambda x \cdot N_{2} x\right) \xrightarrow{p_{2}} \beta \eta c^{n}\left(\lambda x \cdot N_{2}^{\prime \prime} x\right)=M_{2}^{\prime}$ such that $N_{1} \xrightarrow{p_{1}^{\prime \prime}} \beta \eta N_{1}^{\prime \prime}$ and $N_{2}{\xrightarrow{p_{2}^{\prime \prime}}}_{\beta \eta} N_{2}^{\prime \prime}$. because $x \notin \operatorname{fv}\left(N_{1}\right) \cup \mathrm{fv}\left(N_{2}\right)$, by lemma 2.2.3, we obtain $x \notin \operatorname{fv}\left(N_{1}^{\prime \prime}\right) \cup \mathrm{fv}\left(N_{2}^{\prime \prime}\right)$. So, $M_{1}^{\prime}, \lambda x . N_{2}^{\prime \prime} x \in \mathcal{R}^{\beta \eta}$ and by lemma 5.3, $\mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}=$ $\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\}$ and $\mathcal{R}_{\lambda x . N_{2}^{\prime \prime} x}^{\beta \eta}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\}$. Hence, $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}=\{0\} \cup\left\{\lambda x . C|C \in|\left\langle N_{1}^{\prime},\left.\mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right|^{c}\right\}\right.$ and $\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}$

$$
\mid\left\langle\lambda x . N_{2}^{\prime \prime} x, \mathcal{R}_{\lambda x \cdot N_{2}^{\prime \prime} x}^{\beta \eta}\right\rangle^{c}=\{0\} \cup\left\{1 .\left.p|p \in|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}\right\} .
$$

Because $\left|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$, we obtain $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}=\{0\} \cup\{1 . p \mid$ $\left.p \in\left|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}\right\} \subseteq\{0\} \cup\left\{1 .\left.p|p \in|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}\right\}=\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$.

- Else by lemma 5.3, $\mathcal{R}_{N_{1} x}^{\beta \eta}=\left\{1 . p \mid p \in \mathcal{R}_{N_{1}}^{\beta \eta}\right\}$. Let $p_{1}^{\prime}=1 . p_{1}^{\prime \prime}$ such that $p_{1}^{\prime \prime} \in \mathcal{R}_{N_{1}}^{\beta \eta}$. Then, $p_{2}^{\prime}=1 . p_{2}^{\prime \prime}$ such that $p_{2}^{\prime \prime} \in \mathcal{R}_{N_{2}}^{\beta \eta}$. So $M_{1}=\lambda x \cdot N_{1} x{\xrightarrow{p_{1}}}_{\beta \eta} \lambda x . N_{1}^{\prime \prime} x=M_{1}^{\prime}$ and $M_{2}=c^{n}\left(\lambda x \cdot N_{2} x\right) \xrightarrow{p_{2}} \beta \eta c^{n}\left(\lambda x \cdot N_{2}^{\prime \prime} x\right)=M_{2}^{\prime}$ such that $N_{1}{\xrightarrow{p_{1}^{\prime \prime}}}_{\beta \eta} N_{1}^{\prime \prime}$ and $N_{2}{\xrightarrow{p_{2}^{\prime \prime}}}_{\beta \eta} N_{2}^{\prime \prime}$. Because $x \notin \operatorname{fv}\left(N_{1}\right) \cup \mathrm{fv}\left(N_{2}\right)$, by lemma 2.2.3 we obtain, $x \notin$ $\mathrm{fv}\left(N_{1}^{\prime \prime}\right) \cup \mathrm{fv}\left(N_{2}^{\prime \prime}\right)$. So, $M_{1}^{\prime}, \lambda x . N_{2}^{\prime} x \in \mathcal{R}^{\beta \eta}$ and by lemma 5.3, $\mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}=\{0\} \cup\{1 . p \mid$ $\left.p \in \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\}$ and $\mathcal{R}_{\lambda x . N_{2}^{\prime}}^{\beta \eta}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\}$. Hence, $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}=$ $\{0\} \cup\left\{1 .\left.p|p \in|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}==^{2}\left|\left\langle\lambda x . N_{2}^{\prime}, \mathcal{R}_{\lambda x . N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}=$ $\{0\} \cup\left\{1 .\left.p|p \in|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}\right\}$. Because $\left|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$, we obtain $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}=\{0\} \cup\left\{1 .\left.p|p \in|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}\right\} \subseteq\{0\} \cup\{1 . p \mid p \in$ $\left.\left|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}\right\}=\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$.

5. Let $M_{1}=c P_{1} Q_{1} \in \mathcal{M}_{c}$ such that $P_{1}, P_{2} \in \mathcal{M}_{c}$. So $\left|M_{1}\right|^{c}=\left|P_{1}\right|^{c}\left|Q_{1}\right|^{c}=\left|M_{2}\right|^{c}$. We prove the statement by induction on the structure of $M_{2}$ :

- Let $M_{2} \in \mathcal{V} \backslash\{c\}$ then $\left|M_{2}\right|^{c}=M_{2} \neq\left|P_{1}\right|^{c}\left|Q_{1}\right|^{c}$.
- Let $M_{2}=\lambda x . N_{2} \in \Lambda \mathrm{I}_{c}$ such that $N_{2} \in \Lambda \mathrm{I}_{c}$ and $x \neq c$ then $\left|M_{2}\right|^{c}=\lambda x .\left|N_{2}\right|^{c} \neq\left|P_{1}\right|^{c}\left|Q_{1}\right|^{c}$.
- Let $M_{2}=\lambda x . N_{2}[x:=c(c x)] \in \Lambda \eta_{c}$ such that $N_{2} \in \Lambda \eta_{c}$ and $x \neq c$ then $\left|M_{2}\right|^{c}=$ $\lambda x .\left|N_{2}[x:=c(c x)]\right|^{c} \neq\left|P_{1}\right|^{c}\left|Q_{1}\right|^{c}$.
- Let $M_{2}=\lambda x \cdot N_{2} x \in \Lambda \eta_{c}$ such that $N_{2} x \in \Lambda \mathrm{I}_{c}$ and $x \notin \mathrm{fv}\left(N_{2}\right) \cup\{c\}$ and $N_{2} \neq c$ then $\left|M_{2}\right|^{c}=\lambda x .\left|N_{2} x\right|^{c} \neq\left|P_{1}\right|^{c}\left|Q_{1}\right|^{c}$.
- Let $M_{2}=c P_{2} Q_{2} \in \mathcal{M}_{c}$ such that $P_{2}, Q_{2} \in \mathcal{M}_{c}$, then $\left|c P_{2}\right|^{c}=\left|P_{2}\right|^{c}=\left|P_{1}\right|^{c}$ and $\left|Q_{2}\right|^{c}=$ $\left|Q_{1}\right|^{c}$. Since $M_{1}, c P_{2} \notin \mathcal{R}^{r}$, by lemma 5.3, $\mathcal{R}_{M_{1}}^{r}=\left\{1.2 . p \mid p \in \mathcal{R}_{P_{1}}^{r}\right\} \cup\{2 . p \mid p \in$ $\left.\mathcal{R}_{Q_{1}}^{r}\right\}$. So, $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c}\right\}$. Again by lemma 5.3, since $M_{2} \notin \mathcal{R}^{r}, \mathcal{R}_{M_{2}}^{r}=\left\{1.2 . p \mid p \in \mathcal{R}_{P_{2}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{2}}^{r}\right\}$. So, $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle P_{2}, \mathcal{R}_{P_{2}}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c}$ then 1.p $\in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$. Hence, $p \in\left|\left\langle P_{2}, \mathcal{R}_{P_{2}}^{r}\right\rangle\right|^{c}$, i.e. $\left|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c} \subseteq$ $\left|\left\langle P_{2}, \mathcal{R}_{P_{2}}^{r}\right\rangle\right|^{c}$. Let $p \in\left|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c}$ then $2 . p \in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$. Hence, $p \in\left|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}$, i.e. $\left|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}$. Since $p_{1} \in \mathcal{R}_{M_{1}}^{r}$ :
- Either $p_{1}=1.2 \cdot p_{1}^{\prime}$ such that $p_{1}^{\prime} \in \mathcal{R}_{P_{1}}^{r}$ and so $1 .\left|\left\langle P_{1}, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle M_{1}, p_{1}\right\rangle\right|^{c}=\left|\left\langle M_{2}, p_{2}\right\rangle\right|^{c}$. Hence, because $p_{2} \in \mathcal{R}_{M_{2}}^{r}$, we obtain $p_{2}=1.2 \cdot p_{2}^{\prime}$ such that $\left|\left\langle P_{1}, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle P_{2}, p_{2}^{\prime}\right\rangle\right|^{c}$ and $p_{2}^{\prime} \in \mathcal{R}_{P_{2}}^{r}$. Hence, $M_{1}=c P_{1} Q_{1} \xrightarrow{p_{1}} r c P_{1}^{\prime} Q_{1}=M_{1}^{\prime}$ and $M_{2}=c P_{2} Q_{2} \xrightarrow{p_{2}} r$ $c P_{2}^{\prime} Q_{2}=M_{2}^{\prime}$ such that $P_{1}{\xrightarrow{p_{1}^{\prime}}}_{r} P_{1}^{\prime}$ and $P_{2} \xrightarrow{p_{2}^{\prime}} r P_{2}^{\prime}$. By IH, $\left|\left\langle P_{1}^{\prime}, \mathcal{R}_{P_{1}^{\prime}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle P_{2}^{\prime}, \mathcal{R}_{P_{2}^{\prime}}^{r}\right\rangle\right|^{c}$. By lemma 5.3, $\mathcal{R}_{M_{1}^{\prime}}^{r}=\left\{1.2 . p \mid p \in \mathcal{R}_{P_{1}^{\prime}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{1}}^{r}\right\}$ and $\mathcal{R}_{M_{2}^{\prime}}^{r}=\{1.2 . p \mid$ $\left.p \in \mathcal{R}_{P_{2}^{\prime}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{2}}^{r}\right\}$, so $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{r}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle P_{1}^{\prime}, \mathcal{R}_{P_{1}^{\prime}}^{r}\right\rangle\right|^{c}\right\} \cup\{2 . p \mid$ $\left.p \in\left|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle P_{2}^{\prime}, \mathcal{R}_{P_{2}^{\prime}}^{r}\right\rangle\right|^{c}\right\} \cup\{2 . p \mid p \in$
$\left.\left|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{r}\right\rangle\right|^{c}$. Either $p=1 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle P_{1}^{\prime}, \mathcal{R}_{P_{1}^{\prime}}^{r}\right\rangle\right|^{c} \subseteq$ $\left|\left\langle P_{2}^{\prime}, \mathcal{R}_{P_{2}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}$. Or $p=2 . p$ such that $p^{\prime} \in\left|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c} \subseteq$ $\left|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$.
- Or $p_{1}=2 . p_{1}^{\prime}$ such that $p_{1}^{\prime} \in \mathcal{R}_{Q_{1}}^{r}$ and so $2 .\left|\left\langle Q_{1}, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle M_{1}, p_{1}\right\rangle\right|^{c}=\left|\left\langle M_{2}, p_{2}\right\rangle\right|^{c}$. Because $p_{2} \in \mathcal{R}_{M_{2}}^{r}$, we obtain $p_{2}=2 . p_{2}^{\prime}$ such that $\left|\left\langle Q_{1}, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle Q_{2}, p_{2}^{\prime}\right\rangle\right|^{c}$. Hence, $M_{1}=c P_{1} Q_{1} \xrightarrow{p_{1}} r c P_{1} Q_{1}^{\prime}=M_{1}^{\prime}$ and $M_{2}=c P_{2} Q_{2} \xrightarrow{p_{2}} r c P_{2} Q_{2}^{\prime}=M_{2}^{\prime}$ such that $Q_{1}{\xrightarrow{p_{1}^{\prime}}}_{r} Q_{1}^{\prime}$ and $Q_{2}{\xrightarrow{p_{2}^{\prime}}}_{r} Q_{2}^{\prime}$. By IH, $\left|\left\langle Q_{1}^{\prime}, \mathcal{R}_{Q_{1}^{\prime}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle Q_{2}^{\prime}, \mathcal{R}_{Q_{2}^{\prime}}^{r}\right\rangle\right|^{c}$. By lemma 5.3, $\mathcal{R}_{M_{1}^{\prime}}^{r}=\left\{1.2 . p \mid p \in \mathcal{R}_{P_{1}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{1}^{\prime}}^{r}\right\}$ and $\mathcal{R}_{M_{2}^{\prime}}^{r}=\left\{1.2 . p \mid p \in \mathcal{R}_{P_{2}}^{r}\right\} \cup\{2 . p \mid$ $\left.p \in \mathcal{R}_{Q_{2}^{\prime}}^{r}\right\}$, so $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{r}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q_{1}^{\prime}, \mathcal{R}_{Q_{1}^{\prime}}^{r}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle P_{2}, \mathcal{R}_{P_{2}}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q_{2}^{\prime}, \mathcal{R}_{Q_{2}^{\prime}}^{r}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{r}\right\rangle\right|^{c}$. Either $p=1 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle P_{2}, \mathcal{R}_{P_{2}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}$. Or $p=2 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle Q_{1}^{\prime}, \mathcal{R}_{Q_{1}^{\prime}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle Q_{2}^{\prime}, \mathcal{R}_{Q_{2}^{\prime}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}$.
- Let $M_{2}=P_{2} Q_{2} \in \mathcal{M}_{c}$ such that $P_{2}, Q_{2} \in \mathcal{M}_{c}$ and $P_{2}$ is a $\lambda$-abstraction. Then $\left|P_{2}\right|^{c}=\left|P_{1}\right|^{c}$ and $\left|Q_{2}\right|^{c}=\left|Q_{1}\right|^{c}$. Since $M_{1} \notin \mathcal{R}^{r}$, by lemma 5.3, $\mathcal{R}_{M_{1}}^{r}=\left\{1.2 . p \mid p \in \mathcal{R}_{P_{1}}^{r}\right\} \cup\{2 . p \mid$ $\left.p \in \mathcal{R}_{Q_{1}}^{r}\right\}$. So, $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c}\right\}$. Again by lemma 5.3, since $M_{2} \in \mathcal{R}^{r}$ by lemma 1a, $\mathcal{R}_{M_{2}}^{r}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{P_{2}}^{r}\right\} \cup$ $\left\{2 . p \mid p \in \mathcal{R}_{Q_{2}}^{r}\right\}$. So, $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}=\{0\} \cup=\left\{1 .\left.p|p \in|\left\langle P_{2}, \mathcal{R}_{P_{2}}^{r}\right\rangle\right|^{c}\right\} \cup\{2 . p \mid$ $\left.p \in\left|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c}$ then 1.p $\in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$. Hence, $p \in\left|\left\langle P_{2}, \mathcal{R}_{P_{2}}^{r}\right\rangle\right|^{c}$, i.e. $\left|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle P_{2}, \mathcal{R}_{P_{2}}^{r}\right\rangle\right|^{c}$. Let $p \in\left|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c}$ then $2 . p \in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$. Hence, $p \in\left|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}$, i.e. $\left|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c} \subseteq$ $\left|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}$. Since $p_{1} \in \mathcal{R}_{M_{1}}^{r}$ :
- Either $p_{1}=1.2 . p_{1}^{\prime}$ such that $p_{1}^{\prime} \in \mathcal{R}_{P_{1}}^{r}$ and so $1 .\left|\left\langle P_{1}, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle M_{1}, p_{1}\right\rangle\right|^{c}=\left|\left\langle M_{2}, p_{2}\right\rangle\right|^{c}$. Because $p_{2} \in \mathcal{R}_{M_{2}}^{r}$, we obtain $p_{2}=1 . p_{2}^{\prime}$ such that $\left|\left\langle P_{1}, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle P_{2}, p_{2}^{\prime}\right\rangle\right|^{c}$ and $p_{2}^{\prime} \in$ $\mathcal{R}_{P_{2}}^{r}$. Hence, $M_{1}=c P_{1} Q_{1} \xrightarrow{p_{1}} r c P_{1}^{\prime} Q_{1}=M_{1}^{\prime}$ and $M_{2}=P_{2} Q_{2} \xrightarrow{p_{2}}{ }_{r} P_{2}^{\prime} Q_{2}=M_{2}^{\prime}$ such that $P_{1} \xrightarrow{p_{1}^{\prime}} r P_{1}^{\prime}$ and $P_{2} \xrightarrow{p_{2}^{\prime}}{ }_{r} P_{2}^{\prime}$. By IH, $\left|\left\langle P_{1}^{\prime}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle P_{2}^{\prime}, \mathcal{R}_{P_{2}}^{r}\right\rangle\right|^{c}$. Because $P_{2} \in \mathcal{M}_{c}$, then by lemma $2, P_{2}^{\prime} \in \mathcal{M}_{c}$. By lemma 5.2.3, $P_{2}^{\prime} \neq c$. By lemma 5.3, $\mathcal{R}_{M_{1}^{\prime}}^{r}=\{1.2 . p \mid$ $\left.p \in \mathcal{R}_{P_{1}^{\prime}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{1}}^{r}\right\}$ and $\mathcal{R}_{M_{2}^{\prime}}^{r} \backslash\{0\}=\left\{1 . p \mid p \in \mathcal{R}_{P_{2}^{\prime}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{2}}^{r}\right\}$, so $\left|\left\langle M_{1}^{1}, \mathcal{R}_{M_{1}^{\prime}}^{r}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle P_{1}^{\prime}, \mathcal{R}_{P_{1}^{\prime}}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c} \backslash\{0\}=\left\{1 .\left.p|p \in|\left\langle P_{2}^{\prime}, \mathcal{R}_{P_{2}^{\prime}}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{r}\right\rangle\right|^{c}$. Either $p=1 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle P_{1}^{\prime}, \mathcal{R}_{P_{1}^{\prime}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle P_{2}^{\prime}, \mathcal{R}_{P_{2}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}$. Or $p=2 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}$.
- Or $p_{1}=2 . p_{1}^{\prime}$ such that $p_{1}^{\prime} \in \mathcal{R}_{Q_{1}}^{r}$ and so $2 .\left|\left\langle Q_{1}, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle M_{1}, p_{1}\right\rangle\right|^{c}=\left|\left\langle M_{2}, p_{2}\right\rangle\right|^{c}$. Because $p_{2} \in \mathcal{R}_{M_{2}}^{r}$, we obtain $p_{2}=2 . p_{2}^{\prime}$ such that $\left|\left\langle Q_{1}, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle Q_{2}, p_{2}^{\prime}\right\rangle\right|^{c}$. Hence, $M_{1}=c P_{1} Q_{1} \xrightarrow{p_{1}} r c P_{1} Q_{1}^{\prime}=M_{1}^{\prime}$ and $M_{2}=P_{2} Q_{2} \xrightarrow{p_{2}} r P_{2} Q_{2}^{\prime}=M_{2}^{\prime}$ such that $Q_{1} \xrightarrow{p_{1}^{\prime}} r$ $Q_{1}^{\prime}$ and $Q_{2} \stackrel{p}{\rightarrow}_{r}^{\prime} Q_{2}^{\prime}$. By IH, $\left|\left\langle Q_{1}^{\prime}, \mathcal{R}_{Q_{1}^{\prime}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle Q_{2}^{\prime}, \mathcal{R}_{Q_{2}^{\prime}}^{r}\right\rangle\right|^{c}$. By lemma 5.3, $\mathcal{R}_{M_{1}^{\prime}}^{r}=$ $\left\{1.2 . p \mid p \in \mathcal{R}_{P_{1}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{1}^{\prime}}^{r}\right\}$ and $\mathcal{R}_{M_{2}^{\prime}}^{r} \backslash\{0\}=\left\{1 . p \mid p \in \mathcal{R}_{P_{2}}^{r}\right\} \cup\{2 . p \mid$
$\left.p \in \mathcal{R}_{Q_{2}^{\prime}}^{r}\right\}$, so $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{r}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle P_{1}, \mathcal{R}_{\left.P_{1}\right\rangle}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q_{1}^{\prime}, \mathcal{R}_{Q_{1}^{\prime}}^{r}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c} \backslash\{0\}=\left\{1 .\left.p|p \in|\left\langle P_{2}, \mathcal{R}_{P_{2}}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q_{2}^{\prime}, \mathcal{R}_{Q_{2}^{\prime}}^{r}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{r}\right\rangle\right|^{c}$. Either $p=1 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle P_{2}, \mathcal{R}_{P_{2}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}$. Or $p=2 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle Q_{1}^{\prime}, \mathcal{R}_{Q_{1}^{\prime}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle Q_{2}^{\prime}, \mathcal{R}_{Q_{2}^{\prime}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}$.
- Let $M_{2}=c N_{2} \in \mathcal{M}_{c}=\Lambda \eta_{c}$ such that $N_{2} \in \Lambda \eta_{c}$. So $\left|N_{2}\right|^{c}=\left|M_{2}\right|^{c}=\left|M_{1}\right|^{c}$. By lemma 5.4.5, $\mathcal{R}_{M_{2}}^{\beta \eta}=\left\{2 . p \mid p \in \mathcal{R}_{N_{2}}^{\beta \eta}\right\}$ and $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}$ $\left|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{\beta \eta}\right\rangle\right|^{c}$. Because $p_{2} \in \mathcal{R}_{M_{2}}^{\beta \eta}$, we obtain $p_{2}=2 . p_{2}^{\prime}$ such that $p_{2}^{\prime} \in \mathcal{R}_{N_{2}}^{\beta \eta}$. So, $M_{2}=c N_{2} \xrightarrow{p_{2}} \beta \eta \eta N_{2}^{\prime}=M_{2}^{\prime}$ such that $N_{2} \xrightarrow{p_{2}^{\prime}} \beta \eta N_{2}^{\prime}$. Because $\left|\left\langle N_{2}, p_{2}^{\prime}\right\rangle\right|^{c}={ }^{3}\left|\left\langle M_{2}, p_{2}\right\rangle\right|^{c}=$ $\left|\left\langle M_{1}, p_{1}\right\rangle\right|^{c}$, by IH, $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$.

6. Let $M_{1}=\left(\lambda x . P_{1}\right) Q_{1} \in \mathcal{M}_{c}$ such that $\lambda x . P_{1}, Q_{1} \in \mathcal{M}_{c}$. By lemma 5.2.8, lemma 5.2.12a and lemma 5.2.9, $P_{1} \in \mathcal{M}_{c}$ and $x \neq c$. So $\left|M_{1}\right|^{c}=\left|\lambda x . P_{1}\right|^{c}\left|Q_{1}\right|^{c}=\left|M_{2}\right|^{c}=\left(\lambda x .\left|P_{1}\right|^{c}\right)\left|Q_{1}\right|^{c}$. By lemma 1a, $M_{1} \in \mathcal{R}^{r}$, so by lemma 5.3, $\mathcal{R}_{M_{1}}^{r}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{\lambda x . P_{1}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{1}}^{r}\right\}$ and $\mathcal{R}_{M_{1}}^{r} \backslash\{1.0\}=\{0\} \cup\left\{1.1 . p \mid p \in \mathcal{R}_{P_{1}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{1}}^{r}\right\}$. So $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c}=\{0\} \cup\{1 . p \mid p \in$ $\left.\left|\left\langle\lambda x . P_{1}, \mathcal{R}_{\lambda x . P_{1}}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c} \backslash\{1.0\}=\{0\} \cup\{1.1 . p \mid p \in$ $\left.\left|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c}\right\}$. We prove this statement by induction on the structure of $M_{2}$ :

- Let $M_{2} \in \mathcal{V} \backslash\{c\}$ then $\left|M_{2}\right|^{c}=M_{2} \neq\left|P_{1}\right|^{c}\left|Q_{1}\right|^{c}$.
- Let $M_{2}=\lambda x . N_{2} \in \Lambda \mathrm{I}_{c}$ such that $N_{2} \in \Lambda \mathrm{I}_{c}$ and $x \neq c$ then $\left|M_{2}\right|^{c}=\lambda x .\left|N_{2}\right|^{c} \neq\left|P_{1}\right|^{c}\left|Q_{1}\right|^{c}$.
- Let $M_{2}=\lambda x \cdot N_{2}[x:=c(c x)] \in \Lambda \eta_{c}$ such that $N_{2} \in \Lambda \eta_{c}$ and $x \neq c$ then $\left|M_{2}\right|^{c}=$ $\lambda x .\left|N_{2}[x:=c(c x)]\right|^{c} \neq\left|P_{1}\right|^{c}\left|Q_{1}\right|^{c}$.
- Let $M_{2}=\lambda x . N_{2} x \in \Lambda \eta_{c}$ such that $N_{2} x \in \Lambda \eta_{c}, N_{2} \neq c$ and $x \notin \operatorname{fv}\left(N_{2}\right) \cup\{c\}$ then $\left|M_{2}\right|^{c}=\lambda x \cdot\left|N_{2} x\right|^{c} \neq\left|P_{1}\right|^{c}\left|Q_{1}\right|^{c}$.
- Let $M_{2}=c P_{2} Q_{2} \in \mathcal{M}_{c}$ such that $P_{2}, Q_{2} \in \mathcal{M}_{c}$. By lemma 5.3, $\mathcal{R}_{M_{2}}^{r}=\{1.2 . p \mid p \in$ $\left.\mathcal{R}_{P_{2}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{2}}^{r}\right\}$, so $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle P_{2}, \mathcal{R}_{P_{2}}^{r}\right\rangle\right|^{c}\right\} \cup\{2 . p \mid p \in$ $\left.\left|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}\right\}$. Because $0 \in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c}$ and $0 \notin\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$, we obtain $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c} \nsubseteq$ $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$.
- Let $M_{2}=\left(\lambda x . P_{2}\right) Q_{2} \in \mathcal{M}_{c}$ such that $\lambda x . P_{2}, Q_{2} \in \mathcal{M}_{c}$, then $\left|P_{1}\right|^{c}=\left|P_{2}\right|^{c}$ and $\left|Q_{1}\right|^{c}=$ $\left|Q_{2}\right|^{c}$. By lemma 5.2.8, lemma 5.2.12a and lemma 5.2.9, $P_{2} \in \mathcal{M}_{c}$. By lemma 5.3, $\mathcal{R}_{M_{2}}^{r}=$ $\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{\lambda x . P_{2}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{2}}^{r}\right\}$ and $\mathcal{R}_{M_{2}}^{r} \backslash\{1.0\}=\{0\} \cup\left\{1.1 . p \mid p \in \mathcal{R}_{P_{2}}^{r}\right\} \cup$ $\left\{2 . p \mid p \in \mathcal{R}_{Q_{2}}^{r}\right\}$. So $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}=\{0\} \cup\left\{1 .\left.p|p \in|\left\langle\lambda x . P_{2}, \mathcal{R}_{\lambda x . P_{2}}^{r}\right\rangle\right|^{c}\right\} \cup\{2 . p \mid p \in$ $\left.\left|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c} \backslash\{1.0\}=\{0\} \cup\left\{1.1 .\left.p|p \in|\left\langle P_{2}, \mathcal{R}_{P_{2}}^{r}\right\rangle\right|^{c}\right\} \cup\{2 . p \mid p \in$ $\left.\left|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle\lambda x . P_{1}, \mathcal{R}_{\lambda x . P_{1}}^{r}\right\rangle\right|^{c}$ then 1. $p \in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle\lambda x . P_{2}, \mathcal{R}_{\lambda x . P_{2}}^{r}\right\rangle\right|^{c}$, i.e. $\left|\left\langle\lambda x . P_{1}, \mathcal{R}_{\lambda x . P_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle\lambda x . P_{2}, \mathcal{R}_{\lambda x . P_{2}}^{r}\right\rangle\right|^{c}$. Let $p \in\left|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c}$ then 1.1.p $\in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle P_{2}, \mathcal{R}_{P_{2}}^{r}\right\rangle\right|^{c}$, i.e. $\left|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c} \subseteq$ $\left|\left\langle P_{2}, \mathcal{R}_{P_{2}}^{r}\right\rangle\right|^{c}$. Let $p \in\left|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c}$ then 2.p $\in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$. So $p \in$ $\left|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}$, i.e. $\left|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}$. Since $p_{1} \in \mathcal{R}_{M_{1}}^{r}$ :
- Either $p_{1}=0$. Because $p_{2} \in \mathcal{R}_{M_{2}}^{r}$, we obtain $p_{2}=0$. Hence, $M_{1}=\left(\lambda x . P_{1}\right) Q_{1} \xrightarrow{0}{ }_{r}$
$P_{1}\left[x:=Q_{1}\right]=M_{1}^{\prime}$ and $M_{2}=\left(\lambda x . P_{2}\right) Q_{2} \xrightarrow{0}_{r} P_{2}\left[x:=Q_{2}\right]=M_{2}^{\prime}$. By lemma 7b, $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}$.
- Or $p_{1}=1 . p_{1}^{\prime}$ such that $p_{1}^{\prime} \in \mathcal{R}_{\lambda x . P_{1}}^{r}$ and so $1 .\left|\left\langle\lambda x . P_{1}, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle M_{1}, p_{1}\right\rangle\right|^{c}=\left|\left\langle M_{2}, p_{2}\right\rangle\right|^{c}$. Because $p_{2} \in \mathcal{R}_{M_{2}}^{r}$, we obtain $p_{2}=1 . p_{2}^{\prime}$ such that $\left|\left\langle\lambda x . P_{1}, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle\lambda x . P_{2}, p_{2}^{\prime}\right\rangle\right|^{c}$ and $p_{2}^{\prime} \in \mathcal{R}_{\lambda x . P_{2}}^{r}$. By lemma 5.3:
* Either $\lambda x \cdot P_{1}=\lambda x . N_{1} x \in \mathcal{R}^{r}$ such that $x \notin \mathrm{fv}\left(N_{1}\right), \mathcal{M}_{c}=\Lambda \eta_{c}$ and $p_{1}^{\prime}=0$. So, $\left|\left\langle\lambda x . P_{2}, p_{2}^{\prime}\right\rangle\right|^{c}=0$. Hence, $p_{2}^{\prime}=0$ and $\lambda x \cdot P_{2}=\lambda x \cdot N_{2} x$ such that $x \notin \mathrm{fv}\left(N_{2}\right)$. Hence, $M_{1}=\left(\lambda x . N_{1} x\right) Q_{1} \xrightarrow{p_{1}} N_{1} Q_{1}=M_{1}^{\prime}$ and $M_{2}=\left(\lambda x . N_{2} x\right) Q_{2} \xrightarrow{p_{2}} r$ $N_{2} Q_{2}=M_{2}^{\prime}$ such that $\lambda x \cdot N_{1} x \xrightarrow{p_{1}^{\prime}} r N_{1}$ and $\lambda x \cdot N_{2} x \xrightarrow{p_{2}^{\prime}} r N_{2}$. By IH, $\left|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{r}\right\rangle\right|^{c} \subseteq$ $\left|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{r}\right\rangle\right|^{c}$.
- If $N_{1}$ is a $\lambda$-abstraction then by lemma $1 \mathrm{a}, N_{1} x \in \mathcal{R}^{r}$. So 1.1.0 $\in \mathcal{R}_{M_{1}}^{r}$ and $\left|\left\langle M_{2}, 1.1 .0\right\rangle\right|^{c}=1.1 .0=\left|\left\langle M_{1}, 1.1 .0\right\rangle\right|^{c} \in\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$. Hence, 1.1.0 $\in \mathcal{R}_{M_{2}}^{r}$. So $N_{2}$ is a $\lambda$-abstraction. So $\mathcal{R}_{M_{1}^{\prime}}^{r}=\{0\} \cup\{1 . p \mid p \in$ $\left.\mathcal{R}_{N_{1}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{1}}^{r}\right\}$ and $\mathcal{R}_{M_{2}^{\prime}}^{r}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{N_{2}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{2}}^{r}\right\}$, so $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{r}\right\rangle\right|^{c}=\{0\} \cup\left\{1 .\left.p|p \in|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}=\{0\} \cup\left\{1 .\left.p|p \in|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{r}\right\rangle\right|^{c}$. Either $p=0 \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}$. Or $p=1 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}$. Or $p=2 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}$.
- Otherwise $\mathcal{R}_{M_{1}^{\prime}}^{r}=\left\{1 . p \mid p \in \mathcal{R}_{N_{1}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{1}}^{r}\right\}$ and $\mathcal{R}_{M_{2}^{\prime}}^{r} \backslash\{0\}=\{1 . p \mid$ $\left.p \in \mathcal{R}_{N_{2}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{2}}^{r}\right\}$, so $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{r}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{r}\right\rangle\right|^{c}\right\} \cup$ $\left\{2 .\left.p|p \in|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c} \backslash\{0\}=\left\{1 .\left.p|p \in|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{r}\right\rangle\right|^{c}\right\} \cup$ $\left\{2 .\left.p|p \in|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{r}\right\rangle\right|^{c}$. Either $p=1 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}}^{r}\right\rangle\right|^{c}$. Or $p=2 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}$.
* Or $p_{1}^{\prime}=1 . p_{1}^{\prime \prime}$ such that $p_{1}^{\prime \prime} \in \mathcal{R}_{P_{1}}^{r}$. So $p_{2}^{\prime}=1 \cdot p_{2}^{\prime \prime}$ such that $p_{2}^{\prime \prime} \in \mathcal{R}_{P_{2}}^{r}$. Hence, $M_{1}=$ $\left(\lambda x . P_{1}\right) Q_{1} \xrightarrow{p_{1}} r\left(\lambda x . P_{1}^{\prime}\right) Q_{1}=M_{1}^{\prime}$ and $M_{2}=\left(\lambda x . P_{2}\right) Q_{2} \xrightarrow{p_{2}} r\left(\lambda x . P_{2}^{\prime}\right) Q_{2}=M_{2}^{\prime}$ such that $\lambda x \cdot P_{1} \xrightarrow{p_{1}^{\prime}} r \lambda x . P_{1}^{\prime}$ and $\lambda x . P_{2} \xrightarrow{p_{2}^{\prime}} r \lambda x . P_{2}^{\prime}$. By IH, $\left|\left\langle\lambda x . P_{1}^{\prime}, \mathcal{R}_{\lambda x . P_{1}^{\prime}}^{r}\right\rangle\right|^{c} \subseteq$ $\left|\left\langle\lambda x . P_{2}^{\prime}, \mathcal{R}_{\lambda x . P_{2}^{\prime}}^{r}\right\rangle\right|^{c}$. Since $M_{1}, M_{2} \in \mathcal{M}_{c}$, by lemma 2, $M_{1}^{\prime}, M_{2}^{\prime} \in \mathcal{M}_{c}$. By lemma 5.3 and lemma 1a, $\mathcal{R}_{M_{1}^{\prime}}^{r}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{\lambda x . P_{1}^{\prime}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{1}}^{r}\right\}$ and $\mathcal{R}_{M_{2}^{\prime}}^{r}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{\lambda x . P_{2}^{\prime}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{2}}^{r}\right\}$, so $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{r}\right\rangle\right|^{c}=\{0\} \cup$ $\left\{1 .\left.p|p \in|\left\langle\lambda x . P_{1}^{\prime}, \mathcal{R}_{\left.\lambda x . P_{1}^{\prime}\right\rangle}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}=$ $\{0\} \cup\left\{1 .\left.p|p \in|\left\langle\lambda x . P_{2}^{\prime}, \mathcal{R}_{\lambda x . P_{2}^{\prime}}^{r}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}\right\}$. Let $p \in$ $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{r}\right\rangle\right|^{c}$. Either $p=0$ then $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}$. Or $p=1 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle\lambda x . P_{1}^{\prime}, \mathcal{R}_{\lambda x . P_{1}^{\prime}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle\lambda x . P_{2}^{\prime}, \mathcal{R}_{\left.\lambda x . P_{2}\right\rangle}^{r}\right\rangle\right|^{c}$. So $p \in \mid\left\langle M_{2}^{\prime},\left.\mathcal{R}_{M_{2}^{\prime}}^{r}\right|^{c}\right.$. Or $p=2 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle Q_{1}, \mathcal{R}_{Q_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle Q_{2}, \mathcal{R}_{Q_{2}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}$.
- Or $p_{1}=2 . p_{1}^{\prime}$ such that $p_{1}^{\prime} \in \mathcal{R}_{Q_{1}}^{r}$ and so $2 .\left|\left\langle Q_{1}, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle M_{1}, p_{1}\right\rangle\right|^{c}=\left|\left\langle M_{2}, p_{2}\right\rangle\right|^{c}$. Because $p_{2} \in \mathcal{R}_{M_{2}}^{r}$, we obtain $p_{2}=2 \cdot p_{2}^{\prime}$ such that $\left|\left\langle Q_{1}, p_{1}^{\prime}\right\rangle\right|^{c}=\left|\left\langle Q_{2}, p_{2}^{\prime}\right\rangle\right|^{c}$. Hence,
$M_{1}=\left(\lambda x \cdot P_{1}\right) Q_{1} \xrightarrow{p_{1}} r\left(\lambda x \cdot P_{1}\right) Q_{1}^{\prime}=M_{1}^{\prime}$ and $M_{2}=\left(\lambda x \cdot P_{2}\right) Q_{2} \xrightarrow{p_{2}} r\left(\lambda x \cdot P_{2}\right) Q_{2}^{\prime}=$ $M_{2}^{\prime}$ such that $Q_{1} \xrightarrow{p_{1}^{\prime}} r Q_{1}^{\prime}$ and $Q_{2} \xrightarrow{p_{2}^{\prime}} r Q_{2}^{\prime}$. By IH, $\left|\left\langle Q_{1}^{\prime}, \mathcal{R}_{Q_{1}^{\prime}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle Q_{2}^{\prime}, \mathcal{R}_{Q_{2}^{\prime}}^{r}\right\rangle\right|^{c}$. Since $M_{1}, M_{2} \in \mathcal{M}_{c}$, by lemma 2, $M_{1}^{\prime}, M_{2}^{\prime} \in \mathcal{M}_{c}$. By lemma 5.3 and lemma 1a, $\mathcal{R}_{M_{1}^{\prime}}^{r}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{\lambda x . P_{1}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{1}^{\prime}}^{r}\right\}$ and $\mathcal{R}_{M_{2}^{\prime}}^{r}=\{0\} \cup\{1 . p \mid p \in$ $\left.\mathcal{R}_{\lambda x . P_{2}}^{r}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{Q_{2}^{\prime}}^{r}\right\}$, so $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{r}\right\rangle\right|^{c}=\{0\} \cup\left\{1 .\left.p|p \in|\left\langle P_{1}, \mathcal{R}_{P_{1}}^{r}\right\rangle\right|^{c}\right\} \cup\{2 . p \mid$ $\left.p \in\left|\left\langle Q_{1}^{\prime}, \mathcal{R}_{Q_{1}^{\prime}}^{r}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}=\{0\} \cup\left\{1 .\left.p|p \in|\left\langle\lambda x . P_{2}, \mathcal{R}_{\lambda x . P_{2}}^{r}\right\rangle\right|^{c}\right\} \cup\{2 . p \mid$ $\left.p \in\left|\left\langle Q_{2}^{\prime}, \mathcal{R}_{Q_{2}^{\prime}}^{r}\right\rangle\right|^{c}\right\}$. Let $p \in\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{r}\right\rangle\right|^{c}$. Either $p=0 \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}$. Or $p=1 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle\lambda x . P_{1}, \mathcal{R}_{\lambda x . P_{1}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle\lambda x . P_{2}, \mathcal{R}_{\lambda x . P_{2}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}$. Or $p=2 . p^{\prime}$ such that $p^{\prime} \in\left|\left\langle Q_{1}^{\prime}, \mathcal{R}_{Q_{1}^{\prime}}^{r}\right\rangle\right|^{c} \subseteq\left|\left\langle Q_{2}^{\prime}, \mathcal{R}_{Q_{2}^{\prime}}^{r}\right\rangle\right|^{c}$. So $p \in\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{r}\right\rangle\right|^{c}$.
- Let $M_{2}=c N_{2} \in \mathcal{M}_{c}=\Lambda \eta_{c}$ such that $N_{2} \in \Lambda \eta_{c}$. So $\left|N_{2}\right|^{c}=\left|M_{2}\right|^{c}=\left|M_{1}\right|^{c}$. By lemma 5.4.5, $\mathcal{R}_{M_{2}}^{\beta \eta}=\left\{2 . p \mid p \in \mathcal{R}_{N_{2}}^{\beta \eta}\right\}$ and $\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}$ $\left|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{\beta \eta}\right\rangle\right|^{c}$. Because $p_{2} \in \mathcal{R}_{M_{2}}^{\beta \eta}$, we obtain $p_{2}=2 . p_{2}^{\prime}$ such that $p_{2}^{\prime} \in \mathcal{R}_{N_{2}}^{\beta \eta}$. So, $M_{2}=c N_{2} \xrightarrow{p_{2}} \beta \eta N_{2}^{\prime}=M_{2}^{\prime}$ such that $N_{2} \xrightarrow{p_{2}^{\prime}} \beta \eta N_{2}^{\prime}$. Since $\left|\left\langle N_{2}, p_{2}^{\prime}\right\rangle\right|^{c}={ }^{3}\left|\left\langle M_{2}, p_{2}\right\rangle\right|^{c}=$ $\left|\left\langle M_{1}, p_{1}\right\rangle\right|^{c}$, by IH, $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$.

7. Let $M_{1}=c N_{1} \in \mathcal{M}_{c}=\Lambda \eta_{c}$ such that $N_{1} \in \Lambda \eta_{c}$. So $\left|N_{1}\right|^{c}=\left|M_{1}\right|^{c}=\left|M_{2}\right|^{c}$. By lemma 5.4.5, $\mathcal{R}_{M_{1}}^{\beta \eta}=\left\{2 . p \mid p \in \mathcal{R}_{N_{1}}^{\beta \eta}\right\}$ and $\left|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}\left|\left\langle M_{1}, \mathcal{R}_{M_{1}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}, \mathcal{R}_{M_{2}}^{\beta \eta}\right\rangle\right|^{c}$. Because $p_{1} \in \mathcal{R}_{M_{1}}^{\beta \eta}$, we obtain $p_{1}=2 . p_{1}^{\prime}$ such that $p_{1}^{\prime} \in \mathcal{R}_{N_{1}}^{\beta \eta}$. So, $M_{1}=c N_{1}{\xrightarrow{p_{1}}}_{\beta \eta} c N_{1}^{\prime}=M_{1}^{\prime}$ such that $N_{1}{\xrightarrow{p_{1}^{\prime}}}_{\beta \eta} N_{1}^{\prime}$. Because $\left|\left\langle N_{1}, p_{1}^{\prime}\right\rangle\right|^{c}={ }^{3}\left|\left\langle M_{1}, p_{1}\right\rangle\right|^{c}=\left|\left\langle M_{2}, p_{2}\right\rangle\right|^{c}$, by IH, $\left|\left\langle M_{1}^{\prime}, \mathcal{R}_{M_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}={ }^{2}$ $\left|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c} \subseteq\left|\left\langle M_{2}^{\prime}, \mathcal{R}_{M_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$.

## B. Proofs of section 3

Proof(Remark 3.3):

- Commutativity: by $\left(i n_{R}\right), \tau_{1} \cap \tau_{2} \leq^{2} \tau_{2}$ and by $\left(i n_{L}\right), \tau_{1} \cap \tau_{2} \leq^{2} \tau_{1}$ so by ( $\mathrm{mon}^{\prime}$ ), $\tau_{1} \cap \tau_{2} \leq^{2}$ $\tau_{2} \cap \tau_{1}$. By $\left(i n_{L}\right), \tau_{2} \cap \tau_{1} \leq^{2} \tau_{2}$ and by $\left(i n_{R}\right), \tau_{2} \cap \tau_{1} \leq^{2} \tau_{1}$ so by (mon'), $\tau_{2} \cap \tau_{1} \leq^{2} \tau_{1} \cap \tau_{2}$. Hence, $\tau_{1} \cap \tau_{2} \sim^{2} \tau_{2} \cap \tau_{1}$.
- Associativity: by $\left(i n_{R}\right),\left(\tau_{1} \cap \tau_{2}\right) \cap \tau_{3} \leq^{2} \tau_{3}$, by $\left(i n_{L}\right),\left(\tau_{1} \cap \tau_{2}\right) \cap \tau_{3} \leq^{2} \tau_{1} \cap \tau_{2}$, by $\left(i n_{R}\right)$, $\tau_{1} \cap \tau_{2} \leq^{2} \tau_{2}$, by $\left(i n_{L}\right), \tau_{1} \cap \tau_{2} \leq^{2} \tau_{1}$, so by $(t r),\left(\tau_{1} \cap \tau_{2}\right) \cap \tau_{3} \leq^{2} \tau_{1}$ and $\left(\tau_{1} \cap \tau_{2}\right) \cap \tau_{3} \leq^{2} \tau_{2}$. By (mon'), $\left(\tau_{1} \cap \tau_{2}\right) \cap \tau_{3} \leq^{2} \tau_{2} \cap \tau_{3}$ and again by (mon'), $\left(\tau_{1} \cap \tau_{2}\right) \cap \tau_{3} \leq^{2} \tau_{1} \cap\left(\tau_{2} \cap \tau_{3}\right)$. By $\left(i n_{L}\right), \tau_{1} \cap\left(\tau_{2} \cap \tau_{3}\right) \leq^{2} \tau_{1}$, by $\left(i n_{R}\right), \tau_{1} \cap\left(\tau_{2} \cap \tau_{3}\right) \leq^{2} \tau_{2} \cap \tau_{3}$, by $\left(i n_{L}\right), \tau_{2} \cap \tau_{3} \leq^{2} \tau_{2}$, by $\left(i n_{R}\right), \tau_{2} \cap \tau_{3} \leq^{2} \tau_{3}$, so by $(\operatorname{tr}), \tau_{1} \cap\left(\tau_{2} \cap \tau_{3}\right) \leq^{2} \tau_{2}$ and $\tau_{1} \cap\left(\tau_{2} \cap \tau_{3}\right) \leq^{2} \tau_{3}$. By (mon'), $\tau_{1} \cap\left(\tau_{2} \cap \tau_{3}\right) \leq^{2} \tau_{1} \cap \tau_{2}$ and again by (mon'), $\tau_{1} \cap\left(\tau_{2} \cap \tau_{3}\right) \leq^{2}\left(\tau_{1} \cap \tau_{2}\right) \cap \tau_{3}$. Hence, $\left(\tau_{1} \cap \tau_{2}\right) \cap \tau_{3} \sim^{2} \tau_{1} \cap\left(\tau_{2} \cap \tau_{3}\right)$.
- Idempotence: by $\left(i n_{L}\right), \tau \cap \tau \leq^{2} \tau$ and by (ref) and (mon'), $\tau \leq^{2} \tau \cap \tau$, hence, $\tau \sim^{2} \tau \cap \tau$.

## Proof(Lemma 3.5):

1. By induction on the size derivation of $\tau_{1} \leq^{2} \tau_{2}$ and then by case on the last rule of the derivation.

- (ref): $\tau \leq \tau$. By $\tau \in$ TypeOmega.
- (tr): $\left(\tau_{1} \leq^{2} \tau_{2} \wedge \tau_{2} \leq^{2} \tau_{3}\right) \Rightarrow \tau_{1} \leq^{2} \tau_{3}$. By IH twice, $\tau_{3} \in$ TypeOmega.
- ( $\mathrm{in} \mathrm{n}_{L}$ ): $\tau_{1} \cap \tau_{2} \leq^{2} \tau_{1}$. By definition $\tau_{1} \in$ TypeOmega.
- (in $n_{R}$ ): $\tau_{1} \cap \tau_{2} \leq^{2} \tau_{2}$. By definition $\tau_{2} \in$ TypeOmega.
- $(\rightarrow-\cap):\left(\tau_{1} \rightarrow \tau_{2}\right) \cap\left(\tau_{1} \rightarrow \tau_{3}\right) \leq^{2} \tau_{1} \rightarrow\left(\tau_{2} \cap \tau_{3}\right)$. If $\left(\tau_{1} \rightarrow \tau_{2}\right) \cap\left(\tau_{1} \rightarrow \tau_{3}\right) \in$ TypeOmega then by definition $\tau_{1} \rightarrow \tau_{2}, \tau_{1} \rightarrow \tau_{3} \in$ TypeOmega which is false.
- (mon'): $\left(\tau_{1} \leq^{2} \tau_{2} \wedge \tau_{1} \leq^{2} \tau_{3}\right) \Rightarrow \tau_{1} \leq^{2} \tau_{2} \cap \tau_{3}$. By IH $\tau_{2}, \tau_{3} \in$ TypeOmega. Hence, $\tau_{2} \cap \tau_{3} \in$ TypeOmega.
- (mon): $\left(\tau_{1} \leq^{2} \tau_{1}^{\prime} \wedge \tau_{2} \leq^{2} \tau_{2}^{\prime}\right) \Rightarrow \tau_{1} \cap \tau_{2} \leq^{2} \tau_{1}^{\prime} \cap \tau_{2}^{\prime}$. By definition $\tau_{1}, \tau_{2} \in$ TypeOmega. By IH, $\tau_{1}^{\prime}, \tau_{2}^{\prime} \in$ TypeOmega. So $\tau_{1}^{\prime} \cap \tau_{2}^{\prime} \in$ TypeOmega.
- $(\rightarrow-\eta):\left(\tau_{1} \leq^{2} \tau_{1}^{\prime} \wedge \tau_{2}^{\prime} \leq^{2} \tau_{2}\right) \Rightarrow \tau_{1}^{\prime} \rightarrow \tau_{2}^{\prime} \leq^{2} \tau_{1} \rightarrow \tau_{2}$. By $\tau_{1}^{\prime} \rightarrow \tau_{2}^{\prime} \notin$ TypeOmega.
- ( $\Omega$ ): $\tau \leq^{2} \Omega$. By definition $\Omega \in$ TypeOmega.
- ( $\Omega^{\prime}$-lazy): $\tau \rightarrow \Omega \leq^{2} \Omega \rightarrow \Omega$. It is done since $\tau \rightarrow \Omega \notin$ TypeOmega.

2. Let $\tau \leq^{2} \tau^{\prime}$. Assume $\tau \sim^{2} \Omega$. Then $\Omega \leq^{2} \tau$ and by transitivity $\Omega \leq^{2} \tau^{\prime}$. Moreover, by ( $\Omega$ ), $\tau^{\prime} \leq^{2} \Omega$. So $\tau^{\prime} \sim^{2} \Omega$.
3. By ( $\Omega$ ), $\tau \cap \tau^{\prime} \leq^{2} \Omega$. let $\tau \sim^{2} \Omega$ and $\tau^{\prime} \sim^{2} \Omega$, so $\Omega \leq^{2} \tau$ and $\Omega \leq^{2} \tau^{\prime}$ and by (mon'), $\Omega \leq^{2} \tau \cap \tau^{\prime}$.
4. By ( $\Omega$ ), $\tau \leq^{2} \Omega$ and by transitivity, $\tau \leq^{2} \tau^{\prime}$ because $\Omega \leq^{2} \tau^{\prime}$. By (ref), $\tau \leq^{2} \tau$ and by (mon ${ }^{\prime}$ ), $\tau \leq^{2} \tau \cap \tau^{\prime}$.
5. We prove the lemma by induction on the size derivation of $\tau \leq^{2} \tau^{\prime}$ and then by case on the last rule of the derivation.

- (ref): $\tau \leq \tau$. Then it is done with $n=1, \tau_{1}^{\prime \prime}=\tau_{2}$ and $\tau_{1}^{\prime}=\tau_{1}$.
- (tr): $\left(\tau_{1} \leq^{2} \tau_{2} \wedge \tau_{2} \leq^{2} \tau_{3}\right) \Rightarrow \tau_{1} \leq^{2} \tau_{3}$. Let $\tau, \tau^{\prime}$ such that inInter $\left(\tau \rightarrow \tau^{\prime}, \tau_{3}\right)$ and $\tau^{\prime} \not \chi^{2} \Omega$. By IH there exist $n \geq 1$ and $\tau_{1}^{\prime}, \tau_{1}^{\prime \prime}, \ldots, \tau_{n}^{\prime}, \tau_{n}^{\prime \prime}$ such that for all $i \in\{1, \ldots, n\}$, inInter $\left(\tau_{i}^{\prime} \rightarrow\right.$ $\left.\tau_{i}^{\prime \prime}, \tau_{2}\right)$ and $\tau_{i}^{\prime \prime} \not \chi^{2} \Omega$ and $\tau_{1}^{\prime \prime} \cap \cdots \cap \tau_{n}^{\prime \prime} \leq^{2} \tau^{\prime}$. Again by IH, for all $i \in\{1, \ldots, n\}$, there exist $m_{i} \geq 1$ and $\tau_{1, i}^{\prime \prime \prime}, \tau_{1, i}^{\prime \prime \prime \prime}, \ldots, \tau_{m_{i}, i}^{\prime \prime \prime}, \tau_{m_{i}, i}^{\prime \prime \prime \prime} \in$ Type $^{2}$ such that for all $j \in\left\{1, \ldots, m_{i}\right\}$, $\operatorname{inInter}\left(\tau_{j, i}^{\prime \prime \prime} \rightarrow \tau_{j, i}^{\prime \prime \prime \prime}, \tau_{1}\right)$ and $\tau_{j, i}^{\prime \prime \prime \prime} \not \chi^{2} \Omega$ and $\tau_{1}^{\prime \prime \prime \prime} \cap \cdots \cap \tau_{m}^{\prime \prime \prime \prime} \leq^{2} \tau_{i}^{\prime \prime}$. Using rule (mon), associativity and commutativity, $\tau_{1,1}^{\prime \prime \prime \prime} \cap \cdots \cap \tau_{m_{1}, 1}^{\prime \prime \prime \prime} \cap \cdots \cap \tau_{1, n}^{\prime \prime \prime \prime} \cap \cdots \cap \tau_{m_{n}, n}^{\prime \prime \prime \prime} \leq^{2} \tau^{\prime}$.
Let $\tau \sim^{2} \Omega$. Then by IH , for all $i \in\{1, \ldots, n\}, \tau_{i}^{\prime} \sim^{2} \Omega$. Again by IH , for all $i \in\{1, \ldots, n\}$, for all $j \in\left\{1, \ldots, m_{i}\right\}, \tau_{j, i}^{\prime \prime \prime} \sim^{2} \Omega$.
- $\left(i n_{L}\right): \tau_{1} \cap \tau_{2} \leq^{2} \tau_{1}$. Let $\tau, \tau^{\prime}$ such that $\operatorname{in} \operatorname{Inter}\left(\tau \rightarrow \tau^{\prime}, \tau_{1}\right)$ and $\tau^{\prime} \not \chi^{2} \Omega$ then it is done with $n=1, \tau_{1}^{\prime \prime}=\tau^{\prime}$ and $\tau_{1}^{\prime}=\tau$.
- $\left(i n_{R}\right): \tau_{1} \cap \tau_{2} \leq^{2} \tau_{2}$. Let $\tau, \tau^{\prime}$ such that $\operatorname{inInter}\left(\tau \rightarrow \tau^{\prime}, \tau_{2}\right)$ and $\tau^{\prime} \not \chi^{2} \Omega$ then it is done with $n=1, \tau_{1}^{\prime \prime}=\tau^{\prime}$ and $\tau_{1}^{\prime}=\tau$.
- $(\rightarrow-\cap):\left(\tau_{1} \rightarrow \tau_{2}\right) \cap\left(\tau_{1} \rightarrow \tau_{3}\right) \leq^{2} \tau_{1} \rightarrow\left(\tau_{2} \cap \tau_{3}\right)$. Let $\tau, \tau^{\prime}$ such that inInter $\left(\tau \rightarrow \tau^{\prime}, \tau_{1} \rightarrow\right.$ $\left.\left(\tau_{2} \cap \tau_{3}\right)\right)$ and $\tau^{\prime} \not \chi^{2} \Omega$ then $\tau=\tau_{1}$ and $\tau^{\prime}=\tau_{2} \cap \tau_{3} . \tau_{2} \not \chi^{2} \Omega$ or $\tau_{3} \not \chi^{2} \Omega$ because $\tau^{\prime} \not \chi^{2} \Omega$ and using lemma 3.5.3. If $\tau_{2} \not \chi^{2} \Omega$ and $\tau_{3} \not \chi^{2} \Omega$ then it is done with $n=2, \tau_{1}^{\prime}=\tau_{2}^{\prime}=\tau_{1}$ and $\tau_{1}^{\prime \prime}=\tau_{2}$ and $\tau_{2}^{\prime \prime}=\tau_{3}$. If $\tau_{2} \not \chi^{2} \Omega$ and $\tau_{3} \sim^{2} \Omega$ then it is done with $n=1, \tau_{1}^{\prime}=\tau_{1}$ and $\tau_{1}^{\prime \prime}=\tau_{2}$ because $\tau_{2} \leq^{2} \tau_{2} \cap \tau_{3}$ by lemma 3.5.4. If $\tau_{2} \sim^{2} \Omega$ and $\tau_{3} \not \chi^{2} \Omega$ then it is done with $n=1, \tau_{1}^{\prime}=\tau_{1}$ and $\tau_{1}^{\prime \prime}=\tau_{3}$ because $\tau_{3} \leq^{2} \tau_{2} \cap \tau_{3}$ by lemma 3.5.4 and commutativity.
- ( $\mathrm{mon}^{\prime}$ ): $\left(\tau_{1} \leq^{2} \tau_{2} \wedge \tau_{1} \leq^{2} \tau_{3}\right) \Rightarrow \tau_{1} \leq^{2} \tau_{2} \cap \tau_{3}$. Let $\tau, \tau^{\prime}$ such that inInter $\left(\tau \rightarrow \tau^{\prime}, \tau_{2} \cap \tau_{3}\right)$ and $\tau^{\prime} \not \chi^{2} \Omega$. Either $\operatorname{inInter}\left(\tau \rightarrow \tau^{\prime}, \tau_{2}\right)$ and we conclude by IH. Or $\operatorname{inInter}\left(\tau \rightarrow \tau^{\prime}, \tau_{3}\right)$ and we conclude by IH.
- (mon): $\left(\tau_{1} \leq^{2} \tau_{1}^{\prime} \wedge \tau_{2} \leq^{2} \tau_{2}^{\prime}\right) \Rightarrow \tau_{1} \cap \tau_{2} \leq^{2} \tau_{1}^{\prime} \cap \tau_{2}^{\prime}$. Let $\tau, \tau^{\prime}$ such that inInter $(\tau \rightarrow$ $\left.\tau^{\prime}, \tau_{1}^{\prime} \cap \tau_{2}^{\prime}\right)$. Either inInter $\left(\tau \rightarrow \tau^{\prime}, \tau_{1}^{\prime}\right)$ and it is done by IH. $\operatorname{Or} \operatorname{inInter}\left(\tau \rightarrow \tau^{\prime}, \tau_{2}^{\prime}\right)$ and it is done by IH.
- $(\rightarrow-\eta):\left(\tau_{1} \leq^{2} \tau_{1}^{\prime} \wedge \tau_{2}^{\prime} \leq^{2} \tau_{2}\right) \Rightarrow \tau_{1}^{\prime} \rightarrow \tau_{2}^{\prime} \leq^{2} \tau_{1} \rightarrow \tau_{2}$. Let $\tau, \tau^{\prime}$ such that inInter $(\tau \rightarrow$ $\left.\tau^{\prime}, \tau_{1} \rightarrow \tau_{2}\right)$ and $\tau^{\prime} \not \chi^{2} \Omega$ then $\tau=\tau_{1}$ and $\tau^{\prime}=\tau_{2}$ and it is done with $n=1$ and $\tau_{1}^{\prime \prime}=\tau_{2}^{\prime}$ because $\tau_{2}^{\prime} \chi^{2} \Omega$ by lemma 3.5.2 and because if $\tau_{1} \sim^{2} \Omega$ then $\tau_{1}^{\prime} \sim^{2} \Omega$.
- $(\Omega): \tau_{0} \leq^{2} \Omega$. There is no $\tau, \tau^{\prime}$ such that $\operatorname{inInter}\left(\tau \rightarrow \tau^{\prime}, \Omega\right)$.
- ( $\Omega^{\prime}$-lazy): $\tau_{0} \rightarrow \Omega \leq^{2} \Omega \rightarrow \Omega$. there is no $\tau^{\prime} \not \chi^{2} \Omega$ such that $\operatorname{inInter}\left(\tau \rightarrow \tau^{\prime}, \Omega \rightarrow \Omega\right)$.

6. let $\tau^{\prime} \in$ Type $^{2}$. First we prove that $\Omega \rightarrow \tau^{\prime} \not \chi^{2} \Omega$. Assume $\Omega \rightarrow \tau^{\prime} \not \chi^{2} \Omega$ then $\Omega \leq^{2} \Omega \rightarrow \tau^{\prime}$. By lemma 3.5.1, $\Omega \rightarrow \tau^{\prime} \in$ TypeOmega which is false.
Let $\tau \sim^{2} \Omega$. Assume $\alpha \rightarrow \Omega \rightarrow \tau^{\prime} \sim^{2} \Omega \rightarrow \tau$ then $\Omega \rightarrow \tau \leq^{2} \alpha \rightarrow \Omega \rightarrow \tau^{\prime}$. By lemma 3.5.5, $\tau \leq^{2} \Omega \rightarrow \tau^{\prime}$ which is false.
Let $\tau \not \chi^{2} \Omega$. Assume $\alpha \rightarrow \Omega \rightarrow \tau^{\prime} \sim^{2} \Omega \rightarrow \tau$ then $\alpha \rightarrow \Omega \rightarrow \tau^{\prime} \leq^{2} \Omega \rightarrow \tau$. By lemma 3.5.5, $\alpha \sim^{2} \Omega$ because $\Omega \sim^{2} \Omega$, which is false.

## C. Proofs of section 4

Proof(Lemma 4.4):

1. If $\tau_{1} \cap \tau_{2} \in$ NTType $^{3}$ then it is done by definition. Otherwise $\tau_{1}, \tau_{2} \notin$ NTType $^{3}$, so $\llbracket \tau_{1} \cap \tau_{2} \rrbracket_{\mathcal{P}}^{3}=$ $\Lambda=\Lambda \cap \Lambda=\llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} \cap \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}$.
2. We prove this result by induction on the structure of $\rho$.

- Let $\rho=\alpha$ then $\llbracket \rho \rrbracket_{\mathcal{P}}^{3}=\mathcal{P}$.
- Let $\rho=\tau \rightarrow \rho^{\prime}$, then by definition, $\llbracket \rho \rrbracket_{\mathcal{P}}^{3} \subseteq \mathcal{P}$.
- Let $\rho=\tau \cap \rho^{\prime}$, then by IH, $\llbracket \rho^{\prime} \rrbracket_{\mathcal{P}}^{3} \subseteq \mathcal{P}$. So $\llbracket \rho \rrbracket_{\mathcal{P}}^{3}=\llbracket \tau \rrbracket_{\mathcal{P}}^{3} \cap \llbracket \rho^{\prime} \rrbracket_{\mathcal{P}}^{3} \subseteq \mathcal{P}$.
- Let $\rho=\rho^{\prime} \cap \tau$, then by IH, $\llbracket \rho^{\prime} \rrbracket_{\mathcal{P}}^{3} \subseteq \mathcal{P}$. So $\llbracket \rho \rrbracket_{\mathcal{P}}^{3}=\llbracket \tau \rrbracket_{\mathcal{P}}^{3} \cap \llbracket \rho^{\prime} \rrbracket_{\mathcal{P}}^{3} \subseteq \mathcal{P}$.

3. By induction on the size of the derivation of $\tau_{1} \leq^{2} \tau_{2}$ and then by case on the last step.

- (ref): $\tau \leq \tau$. This case is trivial.
- ( $\Omega$ ): $\tau \leq \Omega$. This case is trivial since $\Omega \notin$ NTType $^{3}$.
- ( $\operatorname{tr}$ ): $\tau_{1} \leq \tau_{2} \wedge \tau_{2} \leq \tau_{3} \Rightarrow \tau_{1} \leq \tau_{3}$. We conclude using IH twice.
- ( $\Omega^{\prime}$-lazy): $\tau \rightarrow \Omega \leq \Omega \rightarrow \Omega$. This case is trivial since $\Omega \rightarrow \Omega \notin$ NTType $^{3}$.
- $\left(i n_{L}\right): \tau_{1} \cap \tau_{2} \leq \tau_{1}$. This case is trivial.
- (in $R_{R}$ : $\tau_{1} \cap \tau_{2} \leq \tau_{2}$. This case is trivial.
- $(\rightarrow-\cap):\left(\tau_{1} \rightarrow \tau_{2}\right) \cap\left(\tau_{1} \rightarrow \tau_{3}\right) \leq \tau_{1} \rightarrow\left(\tau_{2} \cap \tau_{3}\right)$. if $\tau_{1} \rightarrow\left(\tau_{2} \cap \tau_{3}\right) \in$ NTType $^{3}$ then $\tau_{2} \in$ NTType $^{3}$ or $\tau_{3} \in$ NTType $^{3}$. Hence $\tau_{1} \rightarrow \tau_{2} \in$ NTType $^{3}$ or $\tau_{1} \rightarrow \tau_{3} \in$ NTType $^{3}$, so $\left(\tau_{1} \rightarrow \tau_{2}\right) \cap\left(\tau_{1} \rightarrow \tau_{3}\right) \in$ NTType $^{3}$.
- (mon'): $\tau_{1} \leq \tau_{2} \wedge \tau_{1} \leq \tau_{3} \Rightarrow \tau_{1} \leq \tau_{2} \cap \tau_{3}$. If $\tau_{2} \cap \tau_{3} \in$ NTType $^{3}$ then $\tau_{2} \in$ NTType $^{3}$ or $\tau_{3} \in$ NTType $^{3}$, so by IH, $\tau_{1} \in$ NTType $^{3}$.
- (mon): $\tau_{1} \leq \tau_{1}^{\prime} \wedge \tau_{2} \leq \tau_{2}^{\prime} \Rightarrow \tau_{1} \cap \tau_{2} \leq \tau_{1}^{\prime} \cap \tau_{2}^{\prime}$. If $\tau_{1}^{\prime} \cap \tau_{2}^{\prime} \in$ NTType $^{3}$ then $\tau_{1}^{\prime} \in$ NTType $^{3}$ or $\tau_{2}^{\prime} \in$ NTType $^{3}$. So by IH, $\tau_{1} \in$ NTType $^{3}$ or $\tau_{2} \in$ NTType $^{3}$, hence $\tau_{1} \cap \tau_{2} \in$ NTType $^{3}$.
- $(\rightarrow-\eta): \tau_{1} \leq \tau_{1}^{\prime} \wedge \tau_{2}^{\prime} \leq \tau_{2} \Rightarrow \tau_{1}^{\prime} \rightarrow \tau_{2}^{\prime} \leq \tau_{1} \rightarrow \tau_{2}$. If $\tau_{1} \rightarrow \tau_{2} \in$ NTType $^{3}$ then $\tau_{2} \in$ NTType $^{3}$, so by IH, $\tau_{2}^{\prime} \in$ NTType $^{3}$, hence $\tau_{1}^{\prime} \rightarrow \tau_{2}^{\prime} \in$ NTType $^{3}$.

4. By induction on the size of the derivation of $\tau_{1} \leq^{2} \tau_{2}$ and then by case on the last step.

- (ref): $\tau \leq \tau$. This case is trivial.
- ( $\Omega$ ): $\tau \leq \Omega$. This case is trivial since $\llbracket \Omega \rrbracket_{\mathcal{P}}^{3}=\Lambda$.
- (tr): $\tau_{1} \leq \tau_{2} \wedge \tau_{2} \leq \tau_{3} \Rightarrow \tau_{1} \leq \tau_{3}$. By IH, $\llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} \subseteq \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}$ and $\llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3} \subseteq \llbracket \tau_{3} \rrbracket_{\mathcal{P}}^{3}$, so $\llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} \subseteq \llbracket \tau_{3} \rrbracket_{\mathcal{P}}^{3}$.
- ( $\Omega^{\prime}$-lazy): $\tau \rightarrow \Omega \leq \Omega \rightarrow \Omega$. This case is trivial since $\llbracket \tau \rightarrow \Omega \rrbracket_{\mathcal{P}}^{3}=\llbracket \Omega \rightarrow \Omega \rrbracket_{\mathcal{P}}^{3}=\Lambda$.
- $\left(i n_{L}\right): \tau_{1} \cap \tau_{2} \leq \tau_{1}$. By $1, \llbracket \tau_{1} \cap \tau_{2} \rrbracket_{\mathcal{P}}^{3}=\llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} \cap \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3} \subseteq \llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3}$.
- (in $n_{R}$ ) $\tau_{1} \cap \tau_{2} \leq \tau_{2}$. By $1, \llbracket \tau_{1} \cap \tau_{2} \rrbracket_{\mathcal{P}}^{3}=\llbracket \tau_{1} \rrbracket^{3} \cap \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3} \subseteq \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}$.
- $(\rightarrow-\cap):\left(\tau_{1} \rightarrow \tau_{2}\right) \cap\left(\tau_{1} \rightarrow \tau_{3}\right) \leq \tau_{1} \rightarrow\left(\tau_{2} \cap \tau_{3}\right)$.
- If $\tau_{1} \rightarrow \tau_{2}, \tau_{1} \rightarrow \tau_{3} \in$ NTType $^{3}$ then $\tau_{2}, \tau_{3}, \tau_{2} \cap \tau_{3} \in$ NTType $^{3}$, so $\llbracket\left(\tau_{1} \rightarrow \tau_{2}\right) \cap\left(\tau_{1} \rightarrow\right.$ $\tau_{3} \rrbracket_{\mathcal{P}}^{3}=\llbracket \tau_{1} \rightarrow \tau_{2} \rrbracket_{\mathcal{P}}^{3} \cap \llbracket \tau_{1} \rightarrow \tau_{3} \rrbracket_{\mathcal{P}}^{3}=\left\{M \in \mathcal{P} \mid \forall N \in \llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} . M N \in \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}\right\} \cap\{M \in$ $\left.\mathcal{P} \mid \forall N \in \llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} . M N \in \llbracket \tau_{3} \rrbracket_{\mathcal{P}}^{3}\right\}=\left\{M \in \mathcal{P} \mid \forall N \in \llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} . M N \in \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3} \cap \llbracket \tau_{3} \rrbracket_{\mathcal{P}}^{3}\right\}=$ $\left\{M \in \mathcal{P} \mid \forall N \in \llbracket \tau \rrbracket_{\mathcal{P}}^{3} . M N \in \llbracket \tau_{2} \cap \tau_{3} \rrbracket_{\mathcal{P}}^{3}\right\}=\llbracket \tau_{1} \rightarrow\left(\tau_{2} \cap \tau_{3}\right) \rrbracket_{\mathcal{P}}^{3}$.
- If $\tau_{1} \rightarrow \tau_{2} \in$ NTType $^{3}$ and $\tau_{1} \rightarrow \tau_{3} \notin$ NTType $^{3}$, then $\tau_{2}, \tau_{2} \cap \tau_{3} \in$ NTType $^{3}$ and $\tau_{3} \notin$ NTType $^{3}$, so $\llbracket\left(\tau_{1} \rightarrow \tau_{2}\right) \cap\left(\tau_{1} \rightarrow \tau_{3}\right) \rrbracket_{\mathcal{P}}^{3}=\llbracket \tau_{1} \rightarrow \tau_{2} \rrbracket_{\mathcal{P}}^{3} \cap \llbracket \tau_{1} \rightarrow \tau_{3} \rrbracket_{\mathcal{P}}^{3}=\{M \in$ $\left.\mathcal{P} \mid \forall N \in \llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} . M N \in \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}\right\}=\left\{M \in \mathcal{P} \mid \forall N \in \llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} . M N \in \llbracket \tau_{2} \cap \tau_{3} \rrbracket_{\mathcal{P}}^{3}\right\}=$ $\llbracket \tau_{1} \rightarrow\left(\tau_{2} \cap \tau_{3}\right) \rrbracket_{\mathcal{p}}^{3}$.
- If $\tau_{1} \rightarrow \tau_{2} \notin$ NTType $^{3}$ and $\tau_{1} \rightarrow \tau_{3} \in$ NTType $^{3}$, then $\tau_{3}, \tau_{2} \cap \tau_{3} \in$ NTType $^{3}$ and $\tau_{2} \notin$ NTType $^{3}$, so $\llbracket\left(\tau_{1} \rightarrow \tau_{2}\right) \cap\left(\tau_{1} \rightarrow \tau_{3}\right) \rrbracket_{\mathcal{P}}^{3}=\llbracket \tau_{1} \rightarrow \tau_{2} \rrbracket_{\mathcal{P}}^{3} \cap \llbracket \tau_{1} \rightarrow \tau_{3} \rrbracket_{\mathcal{P}}^{3}=\{M \in$ $\left.\mathcal{P} \mid \forall N \in \llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} . M N \in \llbracket \tau_{3} \rrbracket_{\mathcal{P}}^{3}\right\}=\left\{M \in \mathcal{P} \mid \forall N \in \llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} . M N \in \llbracket \tau_{2} \cap \tau_{3} \rrbracket_{\mathcal{P}}^{3}\right\}=$ $\llbracket \tau_{1} \rightarrow\left(\tau_{2} \cap \tau_{3}\right) \rrbracket_{\mathcal{P}}^{3}$.
- If $\tau_{1} \rightarrow \tau_{2}, \tau_{1} \rightarrow \tau_{3} \notin$ NTType $^{3}$, then $\tau_{2}, \tau_{3}, \tau_{2} \cap \tau_{3} \notin$ NTType $^{3}$, so $\llbracket\left(\tau_{1} \rightarrow \tau_{2}\right) \cap\left(\tau_{1} \rightarrow\right.$ $\left.\tau_{3}\right) \rrbracket_{\mathcal{P}}^{3}=\llbracket \tau_{1} \rightarrow\left(\tau_{2} \cap \tau_{3}\right) \rrbracket_{\mathcal{P}}^{3}=\Lambda$.
- (mon'): $\tau_{1} \leq \tau_{2} \wedge \tau_{1} \leq \tau_{3} \Rightarrow \tau_{1} \leq \tau_{2} \cap \tau_{3}$. By IH, $\llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} \subseteq \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}$ and $\llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} \subseteq \llbracket \tau_{3} \rrbracket_{\mathcal{P}}^{3}$. So by $1, \llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} \subseteq \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3} \cap \llbracket \tau_{3} \rrbracket_{\mathcal{P}}^{3}=\llbracket \tau_{2} \cap \tau_{3} \rrbracket_{\mathcal{P}}^{3}$.
- (mon): $\tau_{1} \leq \tau_{1}^{\prime} \wedge \tau_{2} \leq \tau_{2}^{\prime} \Rightarrow \tau_{1} \cap \tau_{2} \leq \tau_{1}^{\prime} \cap \tau_{2}^{\prime}$. By IH, $\llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} \subseteq \llbracket \tau_{1}^{\prime} \rrbracket_{\mathcal{P}}^{3}$ and $\llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3} \subseteq \llbracket \tau_{2}^{\prime} \rrbracket_{\mathcal{P}}^{3}$. So by $1, \llbracket \tau_{1} \cap \tau_{2} \rrbracket_{\mathcal{P}}^{3}=\llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} \cap \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3} \subseteq \llbracket \tau_{1}^{\prime} \rrbracket_{\mathcal{P}}^{3} \cap \llbracket \tau_{2}^{\prime} \rrbracket_{\mathcal{P}}^{3}=\llbracket \tau_{1}^{\prime} \cap \tau_{2}^{\prime} \rrbracket_{\mathcal{P}}^{3}$.
- $(\rightarrow-\eta): \tau_{1} \leq \tau_{1}^{\prime} \wedge \tau_{2}^{\prime} \leq \tau_{2} \Rightarrow \tau_{1}^{\prime} \rightarrow \tau_{2}^{\prime} \leq \tau_{1} \rightarrow \tau_{2}$. By IH, $\llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} \subseteq \llbracket \tau_{1}^{\prime} \rrbracket_{\mathcal{P}}^{3}$ and $\llbracket \tau_{2}^{\prime} \rrbracket_{\mathcal{P}}^{3} \subseteq \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}$. If $\tau_{1} \rightarrow \tau_{2} \in$ NTType $^{3}$ then $\tau_{2} \in$ NTType $^{3}$ and by $3, \tau_{2}^{\prime} \in$ NTType $^{3}$, so $\tau_{1}^{\prime} \rightarrow \tau_{2}^{\prime} \in$ NTType $^{3}$ and $\llbracket \tau_{1}^{\prime} \rightarrow \tau_{2}^{\prime} \rrbracket_{\mathcal{P}}^{3}=\left\{M \in \mathcal{P} \mid \forall N \in \llbracket \tau_{1}^{\prime} \rrbracket_{\mathcal{P}}^{3} . M N \in \llbracket \tau_{2}^{\prime} \rrbracket_{\mathcal{P}}^{3}\right\} \subseteq\{M \in$ $\left.\mathcal{P} \mid \forall N \in \llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3} . M N \in \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}\right\}=\llbracket \tau_{1} \rightarrow \tau_{2} \rrbracket_{\mathcal{P}}^{3}$. Otherwise, $\llbracket \tau_{1}^{\prime} \rightarrow \tau_{2}^{\prime} \rrbracket_{\mathcal{P}}^{3} \subseteq \llbracket \tau_{1} \rightarrow \tau_{2} \rrbracket_{\mathcal{P}}^{3}=$ $\Lambda$.

5. Assume $\operatorname{VAR}(\mathcal{P}, \mathcal{P})$. Let $n \geq 0, x \in \mathcal{V}$ and for all $i \in\{1, \ldots, n\}, M_{i} \in \mathcal{P}$. By the hypothesis, $x M_{1} \cdots M_{n} \in \mathcal{P}$. We prove that $x M_{1} \cdots M_{n} \in \llbracket \varphi \rrbracket_{\mathcal{P}}^{3}$ by induction on the structure of $\varphi$.

- If $\varphi=\alpha$ then $x M_{1} \cdots M_{n} \in \mathcal{P}=\llbracket \alpha \rrbracket_{\mathcal{P}}^{3}$.
- If $\varphi=\Omega$ then $x M_{1} \cdots M_{n} \in \Lambda=\llbracket \Omega \rrbracket_{\mathcal{P}}^{3}$.
- If $\varphi=\tau \cap \varphi^{\prime}$. By IH, $x M_{1} \cdots M_{n} \in \llbracket \varphi^{\prime} \rrbracket_{\mathcal{P}}^{3}$, so by $1, x M_{1} \cdots M_{n} \in \llbracket \tau \rrbracket_{\mathcal{P}}^{3} \cap \llbracket \varphi^{\prime} \rrbracket_{\mathcal{P}}^{3}=$ $\llbracket \tau \cap \varphi^{\prime} \rrbracket_{\mathcal{p}}^{3}$.
- If $\varphi=\varphi^{\prime} \cap \tau$. By IH, $x M_{1} \cdots M_{n} \in \llbracket \varphi^{\prime} \rrbracket_{\mathcal{P}}^{3}$, so by $1, x M_{1} \cdots M_{n} \in \llbracket \varphi^{\prime} \rrbracket_{\mathcal{P}}^{3} \cap \llbracket \tau \rrbracket_{\mathcal{P}}^{3}=$ $\llbracket \varphi^{\prime} \cap \tau \rrbracket_{\mathcal{P}}^{3}$.
- If $\varphi=\rho \rightarrow \varphi^{\prime}$.
- If $\varphi \in$ NTType $^{3}$ then $\varphi^{\prime} \in$ NTType $^{3}$. Let $N \in \llbracket \rho \rrbracket_{\mathcal{P}}^{3}$, so by $2, N \in \mathcal{P}$. By IH, $x M_{1} \cdots M_{n} N \in \llbracket \varphi^{\prime} \rrbracket_{\mathcal{p}}^{3}$. So $x M_{1} \cdots M_{n} \in \llbracket \rho \rightarrow \varphi^{\prime} \rrbracket_{\mathcal{p}}^{3}$.
- If $\varphi \notin$ NTType $^{3}$ then $x M_{1} \cdots M_{n} \in \llbracket \rho \rightarrow \varphi^{\prime} \rrbracket_{\mathcal{P}}^{3}=\Lambda$.

6. Assume $\operatorname{SAT}(\mathcal{P}, \mathcal{P})$. Let $n \geq 0, x \in \mathcal{V}, M, N \in \Lambda$ and for all $i \in\{1, \ldots, n\}, N_{i} \in \Lambda$. We prove that if $M[x:=N] N_{1} \cdots N_{n} \in \llbracket \tau \rrbracket_{\mathcal{P}}^{3}$ then $(\lambda x . M) N N_{1} \cdots N_{n} \in \llbracket \tau \rrbracket_{\mathcal{P}}^{3}$ by induction on the structure of $\tau$.

- If $\tau=\alpha$ then $\llbracket \alpha \rrbracket_{\mathcal{P}}^{3}=\mathcal{P}$ and we conclude using the hypothesis $\operatorname{SAT}(\mathcal{P}, \mathcal{P})$.
- If $\tau=\Omega$ then $(\lambda x . M) N N_{1} \cdots N_{n} \in \Lambda=\llbracket \Omega \rrbracket_{\mathcal{P}}^{3}$.
- If $\tau=\tau_{1} \cap \tau_{2}$. Assume $M[x:=N] N_{1} \cdots N_{n} \in \llbracket \tau \rrbracket_{\mathcal{P}}^{3}={ }^{1} \llbracket \tau_{1} \rrbracket^{3} \cap \llbracket \tau_{2} \rrbracket^{3}$, then by IH, $(\lambda x . M) N N_{1} \cdots N_{n} \in \llbracket \tau_{1} \rrbracket^{3} \cap \llbracket \tau_{2} \rrbracket^{3}={ }^{1} \llbracket \tau \rrbracket^{3}$.
- If $\tau=\tau_{1} \rightarrow \tau_{2}$.
- If $\tau \in$ NTType $^{3}$ then $\tau_{2} \in$ NTType $^{3}$. Let $P \in \llbracket \tau_{1} \rrbracket_{\mathcal{P}}^{3}$ and $M[x:=N] N_{1} \cdots N_{n} \in \llbracket \tau \rrbracket_{\mathcal{P}}^{3}$ then by $2, M[x:=N] N_{1} \cdots N_{n} \in \mathcal{P}$. By hypothesis, $(\lambda x . M) N N_{1} \cdots N_{n} \in \mathcal{P}$. Moreover, $M[x:=N] N_{1} \cdots N_{n} P \in \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}$. By IH, $(\lambda x . M) N N_{1} \cdots N_{n} P \in \llbracket \tau_{2} \rrbracket_{\mathcal{P}}^{3}$, so $(\lambda x . M) N N_{1} \cdots N_{n} \in \llbracket \tau \rrbracket_{\mathcal{P}}^{3}$.
- Let $\tau \notin \mathrm{NTType}^{3}$ then $(\lambda x . M) N N_{1} \cdots N_{n} \in \llbracket \tau \rrbracket_{\mathcal{P}}^{3}=\Lambda$.

## D. Proofs of section 6

Proof(Lemma 6.2): 1. By induction on $\Gamma \vdash^{\beta I} M: \sigma$. 2. By induction on $\Gamma \vdash^{\beta \eta} M: \sigma$.
3. First prove (*): if $\Gamma \vdash^{r} M: \sigma$, and $\sigma \sqsubseteq \sigma^{\prime}$ then $\Gamma \vdash^{r} M: \sigma^{\prime}$ by induction on $\sigma \sqsubseteq \sigma^{\prime}$. Then, do the proof of 3 . by induction on $\Gamma \vdash^{r} M: \sigma$. For the latter we do:

- Case $(a x)$ : If $\Gamma, x: \sigma \vdash^{\beta \eta} x: \sigma, \Gamma^{\prime}, x: \sigma^{\prime} \sqsubseteq \Gamma, x: \sigma$ and $\sigma \sqsubseteq \sigma^{\prime \prime}$ then $\sigma^{\prime} \sqsubseteq \sigma$ and so $\sigma^{\prime} \sqsubseteq \sigma^{\prime \prime}$. By (ax) $\Gamma^{\prime}, x: \sigma^{\prime} \vdash^{\beta \eta} x: \sigma^{\prime} . \operatorname{By}\left({ }^{*}\right), \Gamma^{\prime}, x: \sigma^{\prime} \vdash^{\beta \eta} x: \sigma^{\prime \prime}$.
- Case $\left(\rightarrow_{E^{I}}\right)$ : If $\frac{\Gamma \vdash^{\beta I} M: \sigma \rightarrow \tau \Delta \vdash^{\beta I} N: \sigma}{\Gamma \Pi \Delta \vdash{ }^{I} M N: \tau}, \Gamma=\Gamma_{1}, \Gamma_{2}, \Delta=\Delta_{1}, \Delta_{2}, \Gamma \sqcap \Delta=\Gamma_{3}, \Gamma_{2}, \Delta_{2}, \Gamma^{\prime}=$ $\Gamma_{3}^{\prime}, \Gamma_{2}^{\prime}, \Delta_{2}^{\prime} \sqsubseteq \Gamma$ where, $\Gamma_{1}=\left(x_{i}: \sigma_{i}\right)_{n}, \Gamma_{2}=\left(y_{j}, \tau_{j}\right)_{m}, \Gamma_{3}=\left(x_{i}: \sigma_{i} \cap \sigma_{i}^{\prime}\right)_{n}, \Delta_{1}=\left(x_{i}: \sigma_{i}^{\prime}\right)_{n}$, $\Delta_{2}=\left(z_{l}, \rho_{l}\right)_{k}, \operatorname{dom}\left(\Gamma_{2}\right) \cap \operatorname{dom}\left(\Delta_{2}\right)=\varnothing, \Gamma_{3}^{\prime}=\left(x_{i}: \bar{\sigma}_{i}\right)_{n}, \Gamma_{2}^{\prime}=\left(y_{j}, \bar{\tau}_{j}\right)_{m}, \Delta_{2}^{\prime}=\left(z_{l}, \bar{\rho}_{l}\right)_{k}$, $\overline{\sigma_{i}} \sqsubseteq \sigma_{i} \cap \sigma_{i}^{\prime}, \overline{\tau_{j}} \sqsubseteq \tau_{j}$ and $\overline{\rho_{l}} \sqsubseteq \rho_{l}$ then $\Gamma_{3}^{\prime}, \Gamma_{2}^{\prime} \sqsubseteq \Gamma$ and $\Gamma_{3}^{\prime}, \Delta_{2}^{\prime} \sqsubseteq \Delta$. By IH, $\Gamma_{3}^{\prime}, \Gamma_{2}^{\prime} \vdash^{\beta I} M$ : $\sigma \rightarrow \tau$ and $\Gamma_{3}^{\prime}, \Delta_{2}^{\prime} \vdash^{\beta I} N: \sigma$, so by $\left(\rightarrow_{E^{I}}\right), \Gamma_{3}^{\prime} \sqcap \Gamma_{3}^{\prime}, \Gamma_{2}^{\prime}, \Delta_{2}^{\prime} \vdash^{\overline{\beta I}} M N: \tau$. By $(*)$, and since $\Gamma_{3}^{\prime} \sqcap \Gamma_{3}^{\prime}=\Gamma_{3}^{\prime}$, we have: $\Gamma_{3}^{\prime}, \Gamma_{2}^{\prime}, \Delta_{2}^{\prime} \vdash^{\beta I} M N: \tau$.

Proof(Lemma 6.3): When $M \rightarrow_{r}^{*} N$ and $M \rightarrow_{r}^{*} P$, we write $M \rightarrow_{r}^{*}\{N, P\}$.

1. By induction on $\sigma \in$ Type $^{1}$.

- If $\sigma \in \mathcal{A}$ then $\mathrm{CR}_{0}^{r} \subseteq \mathrm{CR}^{r}=\llbracket \sigma \rrbracket^{r}$.
- If $\sigma=\tau \cap \rho$ then by $\mathrm{IH}, \mathrm{CR}_{0}^{r} \subseteq \llbracket \tau \rrbracket^{r}, \llbracket \rho \rrbracket^{r} \subseteq \mathrm{CR}^{r}$, so $\mathrm{CR}_{0}^{r} \subseteq \llbracket \tau \cap \rho \rrbracket^{r} \subseteq \mathrm{CR}^{r}$.
- If $\sigma=\tau \rightarrow \rho$ then by $\mathrm{IH}, \mathrm{CR}_{0}^{r} \subseteq \llbracket \tau \rrbracket^{r}$, $\llbracket \rho \rrbracket^{r} \subseteq \mathrm{CR}^{r}$ and $\llbracket \sigma \rrbracket^{r} \subseteq \mathrm{CR}^{r}$ by definition. Let $M \in \mathrm{CR}^{r}$, so $M=x N_{1} \ldots N_{n}$ such that $n \geq 0$ and $N_{1}, \ldots, N_{n} \in \mathrm{CR}^{r}$. Let $P \in \llbracket \tau \rrbracket^{r}$ so $P \in \mathrm{CR}^{r}$, hence, $M P \in \mathrm{CR}_{0}^{r} \subseteq \llbracket \rho \rrbracket^{r}$ and $M \in \llbracket \sigma \rrbracket^{r}$.

2. Let $M[x:=N] N_{1} \ldots N_{n} \in \mathrm{CR}^{\beta I}$ where $n \geq 0, x \in \mathrm{fv}(M)$ and $(\lambda x . M) N N_{1} \ldots N_{n} \rightarrow_{\beta I}^{*}$ $\left\{M_{1}, M_{2}\right\}$.
By lemma 2.2.7, there exist $M_{1}^{\prime}$ and $M_{2}^{\prime}$ such that $M_{1} \rightarrow_{\beta I}^{*} M_{1}^{\prime}, M[x:=N] N_{1} \ldots N_{n} \rightarrow_{\beta I}^{*}$ $M_{1}^{\prime}, M_{2} \rightarrow_{\beta I}^{*} M_{2}^{\prime}$ and $M[x:=N] N_{1} \ldots N_{n} \rightarrow_{\beta I}^{*} M_{2}^{\prime}$. Then we conclude using $M[x:=$ $N] N_{1} \ldots N_{n} \in \mathrm{CR}^{\beta I}$.
3. Let $M[x:=N] N_{1} \ldots N_{n} \in \mathrm{CR}^{\beta \eta}$ where $n \geq 0$ and $(\lambda x . M) N N_{1} \ldots N_{n} \rightarrow_{\beta \eta}^{*}\left\{M_{1}, M_{2}\right\}$. By lemma 2.2.7, there exist $M_{1}^{\prime}$ and $M_{2}^{\prime}$ such that $M_{1} \rightarrow_{\beta \eta}^{*} M_{1}^{\prime}, M[x:=N] N_{1} \ldots N_{n} \rightarrow_{\beta \eta}^{*}$ $M_{1}^{\prime}, M_{2} \rightarrow_{\beta \eta}^{*} M_{2}^{\prime}$ and $M[x:=N] N_{1} \ldots N_{n} \rightarrow_{\beta \eta}^{*} M_{2}^{\prime}$. Then we conclude using $M[x:=$ $N] N_{1} \ldots N_{n} \in \mathrm{CR}^{\beta \eta}$.
4. By induction on $\sigma$.

- If $\sigma \in \mathcal{A}$, then the statement is true by 2 .
- If $\sigma=\tau \cap \rho$, then by IH, $\llbracket \tau \rrbracket^{\beta I}$ and $\llbracket \rho \rrbracket^{\beta I}$ are I-saturated. Let $M, N, N_{1}, \ldots, N_{n} \in \Lambda$, $x \in \operatorname{fv}(M), n \geq 0$, and $M[x:=N] N_{1} \ldots N_{n} \in \llbracket \sigma \rrbracket^{\beta I}=\llbracket \tau \rrbracket^{\beta I} \cap \llbracket \rho \rrbracket^{\beta I}$. Then by Isaturation, $(\lambda x . M) N N_{1} \ldots N_{n} \in \llbracket \tau \rrbracket^{\beta I}$ and $(\lambda x . M) N N_{1} \ldots N_{n} \in \llbracket \rho \rrbracket^{\beta I}$. Done.
- If $\sigma=\tau \rightarrow \rho$, then by IH, $\llbracket \tau \rrbracket^{\beta I}$ and $\llbracket \rho \rrbracket^{\beta I}$ are I-saturated. Let $n \geq 0, M, N, N_{1}, \ldots, N_{n} \in$ $\Lambda, x \in \operatorname{fv}(M)$, and $M[x:=N] N_{1} \ldots N_{n} \in \llbracket \sigma \rrbracket^{\beta I}$. Let $P \in \llbracket \tau \rrbracket^{\beta I} \neq \varnothing$, then $M[x:=$ $N] N_{1} \ldots N_{n} P \in \llbracket \rho \rrbracket^{\beta I}$.
By I-saturation, $(\lambda x . M) N N_{1} \ldots N_{n} P \in \llbracket \rho \rrbracket^{\beta I}$ so $(\lambda x . M) N N_{1} \ldots N_{n} \in \llbracket \tau \rrbracket^{\beta I} \Rightarrow \llbracket \rho \rrbracket^{\beta I}$. Since, $M[x:=N] N_{1} \ldots N_{n} \in \llbracket \sigma \rrbracket^{\beta I} \subseteq C R^{\beta I}$ and $C R^{\beta I}$ is saturated by 2, then $(\lambda x . M) N N_{1} \ldots N_{n} \in C R^{\beta I}$.

5. By induction on $\sigma$.

- If $\sigma \in \mathcal{A}$, then the statement is true by 3 .
- If $\sigma=\tau \cap \rho$, then by IH, $\llbracket \tau \rrbracket^{\beta \eta}$ and $\llbracket \rho \rrbracket^{\beta \eta}$ are saturated.

Let $M[x:=N] N_{1} \ldots N_{n} \in \llbracket \sigma \rrbracket^{\beta \eta}=\llbracket \tau \rrbracket^{\beta \eta} \cap \llbracket \rho \rrbracket^{\beta \eta}$.
Then by saturation, $(\lambda x . M) N N_{1} \ldots N_{n} \in \llbracket \tau \rrbracket^{\beta \eta}$ and $(\lambda x . M) N N_{1} \ldots N_{n} \in \llbracket \rho \rrbracket^{\beta \eta}$. Done.

- If $\sigma=\tau \rightarrow \rho$, then by IH, $\llbracket \tau \rrbracket^{\beta \eta}$ and $\llbracket \rho \rrbracket^{\beta \eta}$ are saturated. Let $n \geq 0, M, N, N_{1}, \ldots, N_{n} \in$ $\Lambda, x \in \mathcal{V}$, and $M[x:=N] N_{1} \ldots N_{n} \in \llbracket \sigma \rrbracket^{\beta \eta}$. Let $P \in \llbracket \tau \rrbracket^{\beta \eta} \neq \varnothing$, then $M[x:=$ $N] N_{1} \ldots N_{n} P \in \llbracket \rho \rrbracket^{\beta \eta}$. By saturation, $(\lambda x . M) N N_{1} \ldots N_{n} P \in \llbracket \rho \rrbracket^{\beta \eta}$ so
$(\lambda x . M) N N_{1} \ldots N_{n} \in \llbracket \tau \rrbracket^{\beta \eta} \Rightarrow \llbracket \rho \rrbracket^{r}$. Since, $M[x:=N] N_{1} \ldots N_{n} \in \llbracket \sigma \rrbracket^{\beta \eta} \subseteq C R^{\beta \eta}$ and $C R^{\beta \eta}$ is saturated by 3 , then $(\lambda x . M) N N_{1} \ldots N_{n} \in C R^{\beta \eta}$.
$\operatorname{Proof}\left(\right.$ Lemma 6.4): $\quad$ By induction on $x_{1}: \sigma_{1}, \ldots, x_{n}: \sigma_{n} \vdash^{r} M: \sigma$.
- If the last rule is $(a x)$ or $\left(a x^{I}\right)$, use the hypothesis.
- If the last rule is $\left(\rightarrow_{E^{I}}\right)$. Let $\Gamma_{1} \sqcap \Gamma_{2}=\left(x_{i}: \sigma_{i} \cap \sigma_{i}^{\prime}\right)_{n},\left(y_{i}: \tau_{i}\right)_{p},\left(z_{i}: \rho_{i}\right)_{q}$ such that $\Gamma_{1}=$ $\left(x_{i}: \sigma_{i}\right)_{n},\left(y_{i}: \tau_{i}\right)_{p}$ and $\Gamma_{2}=\left(x_{i}: \sigma_{i}^{\prime}\right)_{n},\left(z_{i}: \rho_{i}\right)_{q}$. Let $\forall i \in\{1, \ldots, n\}, N_{i} \in \llbracket \sigma_{i} \cap \sigma_{i}^{\prime} \rrbracket^{\beta I}$ so $N_{i} \in \llbracket \sigma_{i} \rrbracket^{\beta I}$ and $N_{i} \in \llbracket \sigma_{i}^{\prime} \rrbracket^{\beta I}, \forall i \in\{1, \ldots, p\}, P_{i} \in \llbracket \tau_{i} \rrbracket^{\beta I}$ and $\forall i \in\{1, \ldots, q\}, P_{i}^{\prime} \in \llbracket \rho_{i} \rrbracket^{\beta I}$. So by IH, $M\left[\left(x_{i}:=N_{i}\right)_{n},\left(y_{i}:=P_{i}\right)_{p}\right] \in \llbracket \sigma \rightarrow \tau \rrbracket^{\beta I}$ and $N\left[\left(x_{i}:=N_{i}\right)_{n},\left(z_{i}:=P_{i}^{\prime}\right)_{q}\right] \in \llbracket \sigma \rrbracket^{\beta I}$. Hence, $(M N)\left[\left(x_{i}:=N_{i}\right)_{n},\left(y_{i}:=P_{i}\right)_{p},\left(z_{i}:=P_{i}^{\prime}\right)_{q}\right] \in \llbracket \tau \rrbracket^{\beta I}$.
- If the last rule is $\left(\rightarrow_{E}\right)$. Let $\Gamma=\left(x_{i}: \sigma_{i}\right)_{n}$ and $\left.\forall i \in\{1, \ldots, n\}, N_{i} \in \llbracket \sigma_{i}\right]^{\beta \eta}$. So by IH, $M\left[\left(x_{i}:=\right.\right.$ $\left.\left.N_{i}\right)_{n}\right] \in \llbracket \sigma \rightarrow \tau \rrbracket^{\beta \eta}$ and $N\left[\left(x_{i}:=N_{i}\right)_{n}\right] \in \llbracket \sigma \rrbracket^{\beta \eta}$. Hence, $(M N)\left[\left(x_{i}:=N_{i}\right)_{n}\right] \in \llbracket \tau \rrbracket^{\beta \eta}$.
- If the last rule is $\left(\rightarrow_{I}\right)$. Let $\Gamma=\left(x_{i}: \sigma_{i}\right)_{n}$ and $\forall i \in\{1, \ldots, n\}, N_{i} \in \llbracket \sigma_{i} \rrbracket^{r}$. Let $P \in \llbracket \sigma \rrbracket^{r} \neq \varnothing$. So by IH, $M\left[\left(x_{i}:=N_{i}\right)_{n}, x:=P\right] \in \llbracket \tau \rrbracket^{r}$. Moreover $\left((\lambda x . M)\left[\left(x_{i}:=N_{i}\right)_{n}\right]\right) P=\left(\lambda x . M\left[\left(x_{i}:=\right.\right.\right.$ $\left.\left.\left.N_{i}\right)_{n}\right]\right) P$.
- For $\vdash^{\beta I}$, since $x \in \operatorname{fv}(M)$ by lemma 2.2.4, $\left(\lambda x . M\left[\left(x_{i}:=N_{i}\right)_{n}\right]\right) \rightarrow_{\beta I} M\left[\left(x_{i}:=N_{i}\right)_{n}, x:=\right.$ $P]$ and since by lemma 6.3, $\llbracket \tau \rrbracket^{\beta I}$ is I-saturated, $\left((\lambda x . M)\left[\left(x_{i}:=N_{i}\right)_{n} \rrbracket\right) P \in \llbracket \tau \rrbracket^{\beta I}\right.$.
- For $\vdash^{\beta \eta},\left(\lambda x . M\left[\left(x_{i}:=N_{i}\right)_{n}\right]\right) \rightarrow_{\beta} M\left[\left(x_{i}:=N_{i}\right)_{n}, x:=P\right]$ and since by lemma 6.3, $\llbracket \tau \rrbracket^{\beta \eta}$ is saturated, $\left((\lambda x . M)\left[\left(x_{i}:=N_{i}\right)_{n}\right]\right) P \in \llbracket \tau \rrbracket^{\beta \eta}$.

So $(\lambda x . M)\left[\left(x_{i}:=N_{i}\right)_{n}\right] \in \llbracket \sigma \rrbracket^{r} \Rightarrow \llbracket \tau \rrbracket^{r}$. Since $x \in \llbracket \sigma \rrbracket^{r}, M\left[\left(x_{i}:=N_{i}\right)_{n} \rrbracket \in \llbracket \tau \rrbracket^{r} \subseteq C R^{r}\right.$, so $\lambda x \cdot M\left[\left(x_{i}:=N_{i}\right)_{n}\right]=(\lambda x . M)\left[\left(x_{i}:=N_{i}\right)_{n}\right] \in C R^{r}$.

- If the last rule is $\left(\cap_{I}\right)$. Let $\Gamma=\left(x_{i}: \sigma_{i}\right)_{n}$ and $\forall i \in\{1, \ldots, n\}, N_{i} \in \llbracket \sigma_{i} \rrbracket^{r}$. So by IH, $M\left[\left(x_{i}:=\right.\right.$ $\left.\left.N_{i}\right)_{n}\right] \in \llbracket \tau \rrbracket^{r}$ and $M\left[\left(x_{i}:=N_{i}\right)_{n}\right] \in \llbracket \rho \rrbracket^{r}$. So $M\left[\left(x_{i}:=N_{i}\right)_{n}\right] \in \llbracket \sigma \rrbracket^{r}$.
- If the last rule is $\left(\cap_{E 1}\right)$. Let $\Gamma=\left(x_{i}: \sigma_{i}\right)_{n}$ and $\forall i \in\{1, \ldots, n\}, N_{i} \in \llbracket \sigma_{i} \rrbracket^{r}$. So by IH , $M\left[\left(x_{i}:=N_{i}\right)_{n}\right] \in \llbracket \sigma \cap \tau \rrbracket^{r}$, so $M\left[\left(x_{i}:=N_{i}\right)_{n}\right] \in \llbracket \sigma \rrbracket^{r}$.
- If the last rule is $\left(\cap_{E 2}\right)$. Let $\Gamma=\left(x_{i}: \sigma_{i}\right)_{n}$ and $\forall i \in\{1, \ldots, n\}, N_{i} \in \llbracket \sigma_{i} \rrbracket^{r}$. So by IH , $M\left[\left(x_{i}:=N_{i}\right)_{n}\right] \in \llbracket \sigma \cap \tau \rrbracket^{r}$, so $M\left[\left(x_{i}:=N_{i}\right)_{n}\right] \in \llbracket \tau \rrbracket^{r}$.

Proof(Lemma 6.6): By induction on $M$. Note that by Lemma 5.2, $M \neq c$.

- Let $M=x \neq c$. Then $\Gamma=\Gamma_{1}, x: \tau, \Gamma^{\prime}=x: \tau, \Gamma^{\prime} \vdash^{\beta I} x: \tau$ and $\forall \sigma, \Gamma_{1}, x: \tau, c: \sigma \vdash^{\beta \eta} x: \tau$.
- Let $M=\lambda x . N \in \Lambda \mathrm{I}_{c}$ then by lemma 5.2, $N \in \Lambda \mathrm{I}_{c}$ and $x \in \mathrm{fv}(N) . \forall \rho$ :
- If $c \in \operatorname{fv}(M)$ then $c \in \operatorname{fv}(N)$ and by $\mathrm{IH}, \exists \sigma, \tau$ where $\Gamma^{\prime}, x: \rho, c: \sigma \vdash^{\beta I} N: \tau$, hence $\Gamma^{\prime}, c: \sigma \vdash^{\beta I} \lambda x . N: \rho \rightarrow \tau$.
- If $c \notin \operatorname{fv}(M)$ then by IH, $\exists \tau$ where $\Gamma^{\prime}, x: \rho \vdash^{\beta I} N: \tau$, hence $\Gamma^{\prime} \vdash^{\beta I} \lambda x . N: \tau$.
- Let $M=\lambda x . N \in \Lambda \eta_{c}$ then by lemma 5.2.12.12a, $N \in \Lambda \eta_{c}$. By IH, $\forall \rho, \exists \sigma, \tau$ such that $\Gamma, x$ : $\rho, c: \sigma \vdash^{\beta \eta} N: \tau$. Hence, $\Gamma, c: \sigma \vdash^{\beta \eta} \lambda x . N: \tau$.
- Let $M=c N P$ where $N, P \in \Lambda \mathrm{I}_{c}$. Let $\Gamma_{1}^{\prime}=\Gamma \upharpoonright \mathrm{fv}(N)$ and $\Gamma_{2}^{\prime}=\Gamma \upharpoonright \mathrm{fv}(P)$. Note that $\Gamma^{\prime}=\Gamma \upharpoonright \mathrm{fv}(c N P)=\Gamma_{1}^{\prime} \sqcap \Gamma_{2}^{\prime}$.
- If $c \notin \operatorname{fv}(N) \cup \mathrm{fv}(P)$ then by IH, $\exists \tau_{1}, \tau_{2}$ such that $\Gamma_{1}^{\prime} \vdash^{\beta I} N: \tau_{1}$ and $\Gamma_{2}^{\prime} \vdash^{\beta I} P: \tau_{2}$. Let $\rho \in \operatorname{Type}^{1}$ and $\sigma=\tau_{1} \rightarrow \tau_{2} \rightarrow \rho$. By $\left(\rightarrow_{E_{I}}\right)$ twice, $\Gamma_{1}^{\prime} \sqcap \Gamma_{2}^{\prime}, c: \sigma \vdash^{\beta I} c N P: \rho$.
- If $c \in \operatorname{fv}(N)$ and $c \notin \operatorname{fv}(P)$ then by IH, $\exists \sigma_{1}, \tau_{1}, \tau_{2}$ such that $\Gamma_{1}^{\prime}, c: \sigma_{1} \vdash^{\beta I} N: \tau_{1}$ and $\Gamma_{2}^{\prime} \vdash^{\beta I} P: \tau_{2}$. Let $\rho \in$ Type $^{1}$ and let $\sigma=\sigma_{1} \cap\left(\tau_{1} \rightarrow \tau_{2} \rightarrow \rho\right)$. By $\left(a x^{I}\right)$ and $\left(\cap_{E}\right)$, $c: \sigma \vdash^{\beta I} c: \tau_{1} \rightarrow \tau_{2} \rightarrow \rho$. By lemma 6.2.3, $\Gamma_{1}^{\prime}, c: \sigma \vdash^{\beta I} N: \tau_{1}$. By $\left(\rightarrow_{E_{I}}\right)$ twice, $\Gamma_{1}^{\prime} \sqcap \Gamma_{2}^{\prime}, c: \sigma \vdash^{\beta I} c N P: \rho$.
- If $c \in \operatorname{fv}(N) \cap \operatorname{fv}(P)$ then by IH, $\exists \sigma_{1}, \sigma_{2}, \tau_{1}, \tau_{2}$ such that $\Gamma_{1}^{\prime}, c: \sigma_{1} \vdash^{\beta I} N: \tau_{1}$ and $\Gamma_{2}^{\prime}, c: \sigma_{2} \vdash^{\beta I} N: \tau_{2}$. Let $\rho \in$ Type $^{1}$ and let $\sigma=\sigma_{1} \cap\left(\sigma_{2} \cap\left(\tau_{1} \rightarrow \tau_{2} \rightarrow \rho\right)\right)$. By $\left(a x^{I}\right)$ and $\left(\cap_{E}\right), c: \sigma \vdash^{\beta I} c: \tau_{1} \rightarrow \tau_{2} \rightarrow \rho$. By lemma 6.2.3, $\Gamma_{1}^{\prime}, c: \sigma \vdash^{\beta I} N: \tau_{1}$, and $\Gamma_{2}^{\prime}, c: \sigma \vdash^{\beta I} P: \tau_{2}$. By $\left(\rightarrow_{E_{I}}\right)$ twice, $\Gamma_{1}^{\prime} \sqcap \Gamma_{2}^{\prime}, c: \sigma \vdash^{\beta I} c N P: \rho$.
- Let $M=c N P$ where $N, P \in \Lambda \eta_{c}$. by IH, $\exists \sigma_{1}, \sigma_{2}, \tau_{1}, \tau_{2}$ such that $\Gamma, c: \sigma_{1} \vdash^{\beta \eta} N: \tau_{1}$ and $\Gamma, c: \sigma_{2} \vdash^{\beta \eta} N: \tau_{2}$. Let $\rho \in$ Type $^{1}$ and let $\sigma=\sigma_{1} \cap\left(\sigma_{2} \cap\left(\tau_{1} \rightarrow \tau_{2} \rightarrow \rho\right)\right.$ ). By $\left(a x^{I}\right)$ and $\left(\cap_{E}\right)$, $c: \sigma \vdash^{\beta \eta} c: \tau_{1} \rightarrow \tau_{2} \rightarrow \rho$. By lemma 6.2.3, $\Gamma, c: \sigma \vdash^{\beta \eta} N: \tau_{1}$, and $\Gamma, c: \sigma \vdash^{\beta \eta} P: \tau_{2}$. By $\left(\rightarrow E_{I}\right)$ twice, $\Gamma, c: \sigma \vdash^{\beta \eta} c N P: \rho$.
- Let $M=N P$ where $N, P \in \Lambda \mathrm{I}_{c}$ and $N=\lambda x . N_{0}$. So $N_{0} \in \Lambda \mathrm{I}_{c}$ and $x \in \operatorname{fv}\left(N_{0}\right)$. Let $\Gamma_{1}^{\prime}=\Gamma \upharpoonright \mathrm{fv}(N)$ and $\Gamma_{2}^{\prime}=\Gamma \upharpoonright \mathrm{fv}(P)$. Note that $\Gamma^{\prime}=\Gamma \upharpoonright \mathrm{fv}(N P)=\Gamma_{1}^{\prime} \sqcap \Gamma_{2}^{\prime}$. By BC, $x \neq c$ and $x \notin \mathrm{fv}(P)$.
- If $c \notin \mathrm{fv}\left(\lambda x \cdot N_{0}\right) \cup \mathrm{fv}(P)$ then by IH, $\exists \tau_{2}$ such that $\Gamma_{2}^{\prime} \vdash^{\beta I} P: \tau_{2}$ and again by IH, $\exists \tau_{1}$ such that $\Gamma_{1}^{\prime}, x: \tau_{2} \vdash^{\beta I} N_{0}: \tau_{1}$. $\mathrm{By}\left(\rightarrow_{I}\right)$ and $\left(\rightarrow_{E_{I}}\right), \Gamma_{1}^{\prime} \sqcap \Gamma_{2}^{\prime} \vdash^{\beta I}\left(\lambda x . N_{0}\right) P: \tau_{1}$.
- If $c \in \operatorname{fv}\left(\lambda x . N_{0}\right)$ and $c \notin \mathrm{fv}(P)$ then by $\mathrm{IH}, \exists \tau_{2}$ such that $\Gamma_{2}^{\prime} \vdash^{\beta I} P: \tau_{2}$. Again by IH , $\exists \sigma, \tau_{1}$ such that $\Gamma_{1}^{\prime}, c: \sigma, x: \tau_{2} \vdash^{\beta I} N_{0}: \tau_{1}$. By $\left(\rightarrow_{I}\right)$ and $\left(\rightarrow_{E_{I}}\right), \Gamma_{1}^{\prime} \sqcap \Gamma_{2}^{\prime}, c: \sigma \vdash^{\beta I}$ $\left(\lambda x . N_{0}\right) P: \tau_{1}$.
- If $c \in \operatorname{fv}\left(\lambda x . N_{0}\right) \cap \mathrm{fv}(P)$, then by IH, $\exists \sigma_{2}, \tau_{2}$ such that $\Gamma_{2}^{\prime}, c: \sigma_{2} \vdash^{\beta I} P: \tau_{2}$ and again by IH, $\exists \sigma_{1}, \tau_{1}$ such that $\Gamma_{1}^{\prime}, c: \sigma_{1}, x: \tau_{2} \vdash^{\beta I} N_{0}: \tau_{1}$. By $\left(\rightarrow_{I}\right), \Gamma_{1}^{\prime}, c: \sigma_{1} \vdash^{\beta I} \lambda x N_{0}: \tau_{2} \rightarrow \tau_{1}$. $\operatorname{By}\left(\rightarrow E_{I}\right), \Gamma_{1}^{\prime} \sqcap \Gamma_{2}^{\prime}, c: \sigma_{1} \cap \sigma_{2} \vdash^{\beta I}\left(\lambda x . N_{0}\right) P: \tau_{1}$.
- Let $M=N P$ where $N, P \in \Lambda \eta_{c}$ and $N=\lambda x . N_{0}$ then by lemma 5.2.12.12a, $N_{0} \in \Lambda \eta_{c}$. By IH, $\exists \sigma_{2}, \tau_{2}$ such that $\Gamma, c: \sigma_{2} \vdash^{\beta \eta} P: \tau_{2}$ and again by $\mathrm{IH}, \exists \sigma_{1}, \tau_{1}$ such that $\Gamma, c: \sigma_{1}, x: \tau_{2} \vdash^{\beta \eta} N_{0}$ : $\tau_{1}$. By $\left(\rightarrow_{I}\right), \Gamma, c: \sigma_{1} \vdash^{\beta \eta} \lambda x . N_{0}: \tau_{2} \rightarrow \tau_{1}$. Let $\sigma=\sigma_{1} \cap \sigma_{2}$. By Lemma 6.2.3, $\Gamma, c: \sigma \vdash^{\beta \eta}$ $\lambda x . N_{0}: \tau_{2} \rightarrow \tau_{1}$ and $\Gamma, c: \sigma \vdash^{\beta \eta} P: \tau_{2}$. Hence, by $\left(\rightarrow_{E}\right), \Gamma, c: \sigma \vdash^{\beta \eta}\left(\lambda x . N_{0}\right) P: \tau_{1}$.
- Let $M=c N$ where $N \in \Lambda \eta_{c}$. By IH, $\exists \sigma, \tau$ such that $\Gamma, c: \sigma \vdash^{\beta \eta} N: \tau$. Let $\rho \in$ Type $^{1}$ and $\sigma^{\prime}=\sigma \cap(\tau \rightarrow \rho)$. By Lemma 6.2.3, $\Gamma, c: \sigma^{\prime} \vdash^{\beta \eta} N: \tau$ and $\Gamma, c: \sigma^{\prime} \vdash^{\beta \eta} c: \tau \rightarrow \rho$. Hence, by $\left(\rightarrow_{E}\right), \Gamma, c: \sigma^{\prime} \vdash^{\beta \eta} c N: \rho$.

## E. Proofs of section 7

## Proof(Lemma 7.2):

1. 1a. By induction on the structure of $M \in \Lambda \mathrm{I}$.

- Let $M=x \neq c$. Then $\Phi^{c}(x, \mathcal{F})=x, \mathcal{F}=\varnothing$ and $\mathrm{fv}(x)=\mathrm{fv}(x) \backslash\{c\}$.
- Let $M=\lambda x . N$ such that $x \neq c$ and $\mathcal{F}^{\prime}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{N}^{\beta I}$. Then, $\operatorname{fv}(M)=$ $\operatorname{fv}(N) \backslash\{x\}={ }^{I H} \operatorname{fv}\left(\Phi^{c}\left(N, \mathcal{F}^{\prime}\right)\right) \backslash\{c, x\}=\operatorname{fv}\left(\lambda x . \Phi^{c}\left(N, \mathcal{F}^{\prime}\right)\right) \backslash\{c\}=\operatorname{fv}\left(\Phi^{c}(M, \mathcal{F})\right) \backslash$ $\{c\}$.
- Let $M=M_{1} M_{2}, \mathcal{F}_{1}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{M_{1}}^{\beta I}$ and $\mathcal{F}_{2}=\{p \mid 2 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{M_{2}}^{\beta I}$.
- If $0 \in \mathcal{F}$ then, $\Phi^{c}(M, \mathcal{F})=\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right) \Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right)$.
- Else, $\Phi^{c}(M, \mathcal{F})=c \Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right) \Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right)$.

In both cases, $\mathrm{fv}(M)=\mathrm{fv}\left(M_{1}\right) \cup \mathrm{fv}\left(M_{2}\right)={ }^{I H}\left(\mathrm{fv}\left(\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right)\right) \backslash\{c\}\right) \cup\left(\mathrm{fv}\left(\Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right)\right) \backslash\right.$ $\{c\})=\operatorname{fv}\left(\Phi^{c}(M, \mathcal{F})\right) \backslash\{c\}$.
1b. By induction on the structure of $M \in \Lambda \mathrm{I}$.

- Let $M \in \mathcal{V}$, then $M \neq c$. So $\mathcal{F}=\varnothing$ and $\Phi^{c}(M, \mathcal{F})=M \in \Lambda \mathbf{I}_{c}$.
- Let $M=\lambda x . N$ such that $x \neq c$ and $\mathcal{F}^{\prime}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{N}^{\beta I}$. $\operatorname{By} \operatorname{IH}, \Phi^{c}\left(N, \mathcal{F}^{\prime}\right) \in$ $\Lambda \mathrm{I}_{c}$. By lemma 7.2.1a, $x \in \operatorname{fv}\left(\Phi^{c}\left(N, \mathcal{F}^{\prime}\right)\right)$. Hence, $\Phi^{c}(M, \mathcal{F})=\lambda x . \Phi^{c}\left(N, \mathcal{F}^{\prime}\right) \in \Lambda_{c}$.
- Let $M=M_{1} M_{2}, \mathcal{F}_{1}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{M_{1}}^{\beta I}$ and $\mathcal{F}_{2}=\{p \mid 2 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{M_{2}}^{\beta I}$.
- If $0 \in \mathcal{F}$ then $\Phi^{c}(M, \mathcal{F})=\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right) \Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right)$.

By IH, $\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right), \Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right) \in \Lambda \mathrm{I}_{c}$ and as $M_{1}$ is a $\lambda$-abstraction, $\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right)$ is a $\lambda$-abstraction. Hence $\Phi^{c}(M, \mathcal{F}) \in \Lambda \mathrm{I}_{c}$.

- Else, $\Phi^{c}(M, \mathcal{F})=c \Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right) \Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right)$. By IH, $\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right), \Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right) \in$ $\Lambda \mathrm{I}_{c}$, hence, $\Phi^{c}(M, \mathcal{F}) \in \Lambda \mathrm{I}_{c}$.
1c. By induction on the structure of $M \in \Lambda \mathrm{I}$.
- Let $M=x \neq c$. Then, $\mathcal{F}=\varnothing$ and $\Phi^{c}(x, \mathcal{F})=x=|x|^{c}$.
- Let $M=\lambda x . N$ such that $x \neq c$ and $\mathcal{F}^{\prime}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{N}^{\beta I}$. Then, $\left|\Phi^{c}(M, \mathcal{F})\right|^{c}=$ $\left|\lambda x . \Phi^{c}\left(N, \mathcal{F}^{\prime}\right)\right|^{c}=\lambda x .\left|\Phi^{c}\left(N, \mathcal{F}^{\prime}\right)\right|^{c}={ }^{I H} \lambda x . N$.
- Let $M=M_{1} M_{2}, \mathcal{F}_{1}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{M_{1}}^{\beta I}$ and $\mathcal{F}_{2}=\{p \mid 2 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{M_{2}}^{\beta I}$.
- If $0 \in \mathcal{F}$ then $M_{1}$ is a $\lambda$-abstraction, hence, $\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right)$ is a $\lambda$-abstraction. So, $\left|\Phi^{c}(M, \mathcal{F})\right|^{c}=\left|\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right) \Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right)\right|^{c}=\left|\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right)\right|^{c}\left|\Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right)\right|^{c}={ }^{I H}$ $M_{1} M_{2}=M$.
- Else, $\left|\Phi^{c}(M, \mathcal{F})\right|^{c}=\left|c \Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right) \Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right)\right|^{c}=\left|\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right)\right|^{c}\left|\Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right)\right|^{c}$ $={ }^{I H} M_{1} M_{2}=M$.
1d. By induction on the structure of $M \in \Lambda \mathrm{I}$.
- If $M=x \neq c$ then $\Phi^{c}(M, \mathcal{F})=M$ and $\mathcal{F}=\varnothing={ }^{5.3}\left|\left\langle M, \mathcal{R}_{M}^{\beta I}\right\rangle\right|^{c}$.
- Let $M=\lambda x . N$ such that $x \neq c$ and $\mathcal{F}^{\prime}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{N}^{\beta I}$. Then $\mathcal{F}={ }^{5.3}\{1 . p \mid$ $\left.p \in \mathcal{F}^{\prime}\right\}={ }^{I H}\left\{1 .\left.p|p \in|\left\langle\Phi^{c}\left(N, \mathcal{F}^{\prime}\right), \mathcal{R}_{\Phi^{c}\left(N, \mathcal{F}^{\prime}\right)}^{\beta I}\right\rangle\right|^{c}\right\}=\left\{1 .\left|\left\langle\Phi^{c}\left(N, \mathcal{F}^{\prime}\right), p\right\rangle\right|^{c} \mid p \in\right.$ $\left.\mathcal{R}_{\Phi^{c}\left(N, \mathcal{F}^{\prime}\right)}^{\beta I}\right\}=\left\{\left|\left\langle\Phi^{c}(M, \mathcal{F}), 1 . p\right\rangle\right|^{c} \mid p \in \mathcal{R}_{\Phi^{c}\left(N, \mathcal{F}^{\prime}\right)}^{\beta I}\right\}==^{5.3}\left|\left\langle\Phi^{c}(M, \mathcal{F}), \mathcal{R}_{\Phi^{c}(M, \mathcal{F})}^{\beta I}\right\rangle\right|^{c}$.
- Let $M=M_{1} M_{2}, \mathcal{F}_{1}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{M_{1}}^{\beta I}$ and $\mathcal{F}_{2}=\{p \mid 2 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{M_{2}}^{\beta I}$.
- If $0 \in \mathcal{F}$ then $\Phi^{c}(M, \mathcal{F})=\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right) \Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right)$. Since $M_{1}$ is a $\lambda$-abstraction then $\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right)$ too. By lemma 7.2.1b, $\Phi^{c}(M, \mathcal{F}) \in \Lambda \mathrm{I}_{c}$ then $\Phi^{c}(M, \mathcal{F}) \in \mathcal{R}^{\beta I}$. Hence, $\mathcal{F}={ }^{5.3}\{0\} \cup\left\{1 . p \mid p \in \mathcal{F}_{1}\right\} \cup\left\{2 . p \mid p \in \mathcal{F}_{2}\right\}={ }^{I H}\{0\} \cup\{1 . p \mid$ $\left.p \in\left|\left\langle\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right), \mathcal{R}_{\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right)}^{\beta I}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle\Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right), \mathcal{R}_{\Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right)}^{\beta I}\right\rangle\right|^{c}\right\}=$ $\{0\} \cup\left\{1 .\left|\left\langle\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right), p\right\rangle\right|^{c} \mid p \in \mathcal{R}_{\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right)}^{\beta I}\right\} \cup\left\{2 .\left|\left\langle\Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right), p\right\rangle\right|^{c} \mid p \in\right.$ $\left.\mathcal{R}_{\Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right)}^{\beta I}\right\}=\{0\} \cup\left\{\left|\left\langle\Phi^{c}(M, \mathcal{F}), 1 . p\right\rangle\right|^{c} \mid p \in \mathcal{R}_{\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right)}^{\beta I}\right\} \cup\left\{\left|\left\langle\Phi^{c}(M, \mathcal{F}), 2 . p\right\rangle\right|^{c} \mid\right.$ $\left.p \in \mathcal{R}_{\Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right)}^{\beta I}\right\}={ }^{5.3}\left|\left\langle\Phi^{c}(M, \mathcal{F}), \mathcal{R}_{\Phi^{c}(M, \mathcal{F})}^{\beta I}\right\rangle\right|^{c}$.
- Else, $\Phi^{c}(M, \mathcal{F})=c \Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right) \Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right)$. Then, $\mathcal{F}={ }^{5.3}\left\{1 . p \mid p \in \mathcal{F}_{1}\right\} \cup$ $\left\{2 . p \mid p \in \mathcal{F}_{2}\right\}={ }^{I H}\left\{1 .\left.p|p \in|\left\langle\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right), \mathcal{R}_{\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right)}^{\beta I}\right\rangle\right|^{c}\right\} \cup\{2 . p \mid p \in$ $\mid\left\langle\Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right),\left.\mathcal{R}_{\Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right)}^{\beta I}\right|^{c}\right\}=\left\{1 .\left|\left\langle\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right), p\right\rangle\right|^{c} \mid p \in \mathcal{R}_{\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right)}^{\beta I}\right\} \cup$ $\left\{2 .\left|\left\langle\Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right), p\right\rangle\right|^{c} \mid p \in \mathcal{R}_{\Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right)}^{\beta I}\right\}=$ $\left\{\left|\left\langle\Phi^{c}(M, \mathcal{F}), 1.2 . p\right\rangle\right|^{c} \mid p \in \mathcal{R}_{\Phi^{c}\left(M_{1}, \mathcal{F}_{1}\right)}^{\beta I}\right\} \cup\left\{\left|\left\langle\Phi^{c}(M, \mathcal{F}), 2 . p\right\rangle\right|^{c} \mid p \in \mathcal{R}_{\Phi^{c}\left(M_{2}, \mathcal{F}_{2}\right)}^{\beta I}\right\}$ $={ }^{5.3}\left|\left\langle\Phi^{c}(M, \mathcal{F}), \mathcal{R}_{\Phi^{c}(M, \mathcal{F})}^{\beta I}\right\rangle\right|^{c}$.

2. 2a. By induction on the construction of $M \in \Lambda \mathrm{I}_{c}$. By lemma $6,|M|^{c} \in \Lambda \mathrm{I}$

- Let $M \in \mathcal{V} \backslash\{c\}$. Hence $|M|^{c}=M$, by lemma 5.3, $\left|\left\langle M, \mathcal{R}_{M}^{\beta I}\right\rangle\right|^{c}=\varnothing=\mathcal{R}_{|M|^{c}}^{\beta I}$ and $M=\Phi^{c}\left(|M|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta I}\right\rangle\right|^{c}\right)$.
- Let $M=\lambda x$. $P$ such that $x \neq c, P \in \Lambda \mathrm{I}_{c}$ and $x \in \mathrm{fv}(P)$. Then, $|M|^{c}=\lambda x .|P|^{c}$. By IH, $\left|\left\langle P, \mathcal{R}_{P}^{\beta I}\right\rangle\right|^{c} \subseteq \mathcal{R}_{|P|^{c}}^{\beta I}$ and $P=\Phi^{c}\left(|P|^{c},\left|\left\langle P, \mathcal{R}_{P}^{\beta I}\right\rangle\right|^{c}\right)$. Hence, $\left|\left\langle M, \mathcal{R}_{M}^{\beta I}\right\rangle\right|^{c}={ }^{5.3}$ $\left\{|\langle M, 1 . p\rangle|^{c} \mid p \in \mathcal{R}_{P}^{\beta I}\right\}=\left\{1 .\left.p|p \in|\left\langle P, \mathcal{R}_{P}^{\beta I}\right\rangle\right|^{c}\right\} \subseteq\left\{1 . p \mid p \in \mathcal{R}_{|P| c}^{\beta I}\right\}={ }^{5.3} \mathcal{R}_{|M|^{c}}^{\beta I}$. Moreover, $M=\Phi^{c}\left(|M|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta I}\right\rangle\right|^{c}\right)$.
- Let $M=c P Q$ where $P, Q \in \Lambda \mathrm{I}_{c}$ then $|M|^{c}=|P|^{c}|Q|^{c}$. By $\mathrm{IH},\left|\left\langle P, \mathcal{R}_{P}^{\beta I}\right\rangle\right|^{c} \subseteq \mathcal{R}_{|P| c}^{\beta I}$, $\left|\left\langle Q, \mathcal{R}_{Q}^{\beta I}\right\rangle\right|^{c} \subseteq \mathcal{R}_{|Q| c}^{\beta I}, P=\Phi^{c}\left(|P|^{c},\left|\left\langle P, \mathcal{R}_{P}^{\beta I}\right\rangle\right|^{c}\right)$ and $Q=\Phi^{c}\left(|Q|^{c},\left|\left\langle Q, \mathcal{R}_{Q}^{\beta I}\right\rangle\right|^{c}\right)$.

Hence, $\left|\left\langle M, \mathcal{R}_{M}^{\beta I}\right\rangle\right|^{c}={ }^{5.3}\left\{|\langle M, 1.2 . p\rangle|^{c} \mid p \in \mathcal{R}_{P}^{\beta I}\right\} \cup\left\{|\langle M, 2 . p\rangle|^{c} \mid p \mathcal{R}_{Q}^{\beta I}\right\}=\{1 . p \mid$ $\left.p \in\left|\left\langle P, \mathcal{R}_{P}^{\beta I}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q, \mathcal{R}_{Q}^{\beta I}\right\rangle\right|^{c}\right\} \subseteq\left\{1 . p \mid p \in \mathcal{R}_{|P| c}^{\beta I}\right\} \cup\{2 . p \mid p \in$ $\left.\mathcal{R}_{|Q| c}^{\beta I}\right\} \subseteq^{5.3} \mathcal{R}_{|M|^{c}}^{\beta I}$. Moreover $M=\Phi^{c}\left(|M|^{\beta I},\left|\left\langle M, \mathcal{R}_{M}^{\beta I}\right\rangle\right|^{c}\right)$.

- Let $M=P Q$ where $P, Q \in \Lambda \mathrm{I}_{c}$ and $P$ is a $\lambda$-abstraction. Then, $|M|^{c}=|P|^{c}|Q|^{c}$, where $|P|^{c}$ is a $\lambda$-abstraction. By IH, $\left|\left\langle P, \mathcal{R}_{P}^{\beta I}\right\rangle\right|^{c} \subseteq \mathcal{R}_{|P| c}^{\beta I},\left|\left\langle Q, \mathcal{R}_{Q}^{\beta I}\right\rangle\right|^{c} \subseteq \mathcal{R}_{|Q| c}^{\beta I}$, $P=\Phi^{c}\left(|P|^{c},\left|\left\langle P, \mathcal{R}_{P}^{\beta I}\right\rangle\right|^{c}\right)$ and $Q=\Phi^{c}\left(|Q|^{c},\left|\left\langle Q, \mathcal{R}_{Q}^{\beta I}\right\rangle\right|^{c}\right)$. Hence, $\left|\left\langle M, \mathcal{R}_{M}^{\beta I}\right\rangle\right|^{c}={ }^{5.3}$ $\{0\} \cup\left\{|\langle M, 1 . p\rangle|^{c} \mid p \in \mathcal{R}_{P}^{\beta I}\right\} \cup\left\{|\langle M, 2 . p\rangle|^{c} \mid p \in \mathcal{R}_{Q}^{\beta I}\right\}=\{0\} \cup\{1 . p \mid p \in$ $\left.\left|\left\langle P, \mathcal{R}_{P}^{\beta I}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle Q, \mathcal{R}_{Q}^{\beta I}\right\rangle\right|^{c}\right\} \subseteq\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{|P| c}^{\beta I}\right\} \cup\{2 . p \mid p \in$ $\left.\mathcal{R}_{|Q| c}^{\beta I}\right\}={ }^{5.3} \mathcal{R}_{|M|^{c}}^{\beta I}$. Moreover $M=\Phi^{c}\left(|M|^{\beta I},\left|\left\langle M, \mathcal{R}_{M}^{\beta I}\right\rangle\right|^{c}\right)$.
2b. By lemma $6,|M|^{c} \in \Lambda$ I. By lemma $4 c \notin \mathrm{fv}\left(|M|^{c}\right)$. By lemma 7.2.2a, $\left|\left\langle M, \mathcal{R}_{M}^{\beta I}\right\rangle\right|^{c} \subseteq \mathcal{R}_{|M|^{c}}^{\beta I}$ and $M=\Phi^{c}\left(|M|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta I}\right\rangle\right|^{c}\right)$. To prove unicity, assume that $\left\langle N^{\prime}, \mathcal{F}^{\prime}\right\rangle$ is another such pair. So $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{N^{\prime}}^{\beta I}$ and $M=\Phi^{c}\left(N^{\prime}, \mathcal{F}^{\prime}\right)$. Then, $|M|^{c}=\left|\Phi^{c}\left(N^{\prime}, \mathcal{F}^{\prime}\right)\right|^{c}={ }^{7.2 .1 c} N^{\prime}$ and $\mathcal{F}^{\prime}=7.2 .1 d\left|\left\langle\Phi^{c}\left(N^{\prime}, \mathcal{F}^{\prime}\right), \mathcal{R}_{\Phi^{c}\left(N^{\prime}, \mathcal{F}^{\prime}\right)}^{\beta I}\right\rangle\right|^{c}=\left|\left\langle M, \mathcal{R}_{M}^{\beta I}\right\rangle\right|^{c}$.
$\operatorname{Proof}\left(\right.$ Lemma 7.3): By lemma 7.2.1c and lemma 1, there exists a unique $p^{\prime} \in \mathcal{R}_{\Phi^{c}(M, \mathcal{F})}^{\beta I}$, such that $\left|\left\langle\mathcal{R}_{\Phi^{c}(M, \mathcal{F})}^{\beta I}, p^{\prime}\right\rangle\right|^{c}=p$. By lemma 2.2.8, there exists $P$ such that $\Phi^{c}(M, \mathcal{F}) \xrightarrow{p^{\prime}}{ }_{\beta I} P$. By lemma 5.8.7a, $M={ }^{7.2 .1 c}\left|\Phi^{c}(M, \mathcal{F})\right|^{c} \xrightarrow{p_{0}}{ }_{\beta I}|P|^{c}$, such that $\left|\left\langle\mathcal{R}_{\Phi^{c}(M, \mathcal{F})}^{\beta I}, p^{\prime}\right\rangle\right|^{c}=p_{0}$. So $p=p_{0}$ and by lemma 2.2.9, $M^{\prime}=|P|^{c}$. Let $\mathcal{F}^{\prime}=\left|\left\langle P, \mathcal{R}_{P}^{\beta I}\right\rangle\right|^{c}$. Because, $\Phi^{c}(M, \mathcal{F}) \xrightarrow{p^{\prime}}{ }_{\beta I} P$, by lemma 2 and lemma 7.2.1b, $P \in \Lambda_{c}$. By lemma 7.2.2a, $P=\Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$ and $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta I}$. By lemma 7.2.2b, $\mathcal{F}^{\prime}$ is unique.
$\operatorname{Proof}($ Lemma 7.6.1): It sufficient to prove:

$$
\langle M, \mathcal{F}\rangle \rightarrow_{\beta I d}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle \Longleftrightarrow \Phi^{c}(M, \mathcal{F}) \rightarrow_{\beta I} \Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)
$$

- $\Rightarrow)$ let $\langle M, \mathcal{F}\rangle \rightarrow_{\beta I d}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle$. Then by definition 7.5, there exists $p \in \mathcal{F}$ such that $M \xrightarrow{p}_{\beta I} M^{\prime}$ and $\mathcal{F}^{\prime}$ is the set of $\beta I$-residuals in $M^{\prime}$ of the set of redexes $\mathcal{F}$ in $M$ relative to $p$. By definition 7.4 we obtain $\Phi^{c}(M, \mathcal{F}) \rightarrow_{\beta I} \Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$.
- $\Leftarrow$ Let $\Phi^{c}(M, \mathcal{F}) \rightarrow_{\beta I} \Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$ then by lemma 2.2 .8 , there exists $p \mathcal{R}_{\Phi^{c}(M, \mathcal{F})}^{\beta I}$ such that $\Phi^{c}(M, \mathcal{F}) \xrightarrow{p}{ }_{\beta I} \Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$. Because, by lemma 7.2.1b, $\Phi^{c}(M, \mathcal{F}) \in \Lambda \mathrm{I}_{c}$, by lemma 5.8.7a and lemma 7.2.1c, $M=\left|\Phi^{c}(M, \mathcal{F})\right|^{c} \xrightarrow{p_{0}} \beta_{\beta I}\left|\Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)\right|^{c}=M^{\prime}$ such that $\left|\left\langle\Phi^{c}(M, \mathcal{F}), p_{0}\right\rangle\right|^{c}=p$. By definition 7.4, $\mathcal{F}^{\prime}$ is the set of $\beta I$-residuals in $M^{\prime}$ of the set of redexes $\mathcal{F}$ in $M$ relative to $p_{0}$. By definition 7.5 we obtain $\langle M, \mathcal{F}\rangle \rightarrow_{\beta d}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle$.
$\operatorname{Proof}\left(\right.$ Lemma 7.6.2): By lemma 7.2.1b, $\Phi^{c}\left(M, \mathcal{F}_{1}\right), \Phi^{c}\left(M, \mathcal{F}_{2}\right) \in \Lambda \mathrm{I}_{c}$. By lemma 7.2.1c, $\left|\Phi^{c}\left(M, \mathcal{F}_{1}\right)\right|^{c}=$ $\left|\Phi^{c}\left(M, \mathcal{F}_{2}\right)\right|^{c}$. By lemma 7.2.1d, $\left|\left\langle\Phi^{c}\left(M, \mathcal{F}_{1}\right), \mathcal{R}_{\Phi^{c}\left(M, \mathcal{F}_{1}\right)}^{\beta I}\right\rangle\right|^{c}=\mathcal{F}_{1} \subseteq \mathcal{F}_{2}=\left|\left\langle\Phi^{c}\left(M, \mathcal{F}_{2}\right), \mathcal{R}_{\Phi^{c}\left(M, \mathcal{F}_{2}\right)}^{\beta I}\right\rangle\right|^{c}$.

If $\left\langle M, \mathcal{F}_{1}\right\rangle \rightarrow_{\beta I d}\left\langle M^{\prime}, \mathcal{F}_{1}^{\prime}\right\rangle$ then by lemma 7.6.1, $\Phi^{c}\left(M, \mathcal{F}_{1}\right) \rightarrow_{\beta I} \Phi^{c}\left(M^{\prime}, \mathcal{F}_{1}^{\prime}\right)$. By lemma 2.2.8, there exists $p_{1} \in \mathcal{R}_{\Phi^{c}\left(M, \mathcal{F}_{1}\right)}^{\beta I}$ such that $\Phi^{c}\left(M, \mathcal{F}_{1}\right) \xrightarrow{p_{1}} \beta I \Phi^{c}\left(M^{\prime}, \mathcal{F}_{1}^{\prime}\right)$. Let $p_{0}=\left|\left\langle\mathcal{R}_{\Phi^{c}\left(M, \mathcal{F}_{1}\right)}^{\beta I}, p_{1}\right\rangle\right|^{c}$, so by lemma 7.2.1d, $p_{0} \in \mathcal{F}_{1}$. By lemma 5.8.7a and lemma 7.2.1c, $M \xrightarrow{p_{0}} \beta I M^{\prime}$.

By lemma 7.3 there exists a unique set $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta I}$, such that $\Phi^{c}\left(M, \mathcal{F}_{1}\right) \xrightarrow{p^{\prime}} \beta I \Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$ and $\left|\left\langle\Phi^{c}\left(M, \mathcal{F}_{1}\right), p^{\prime}\right\rangle\right|^{c}=p_{0}$. By lemma 2.2.8, $p^{\prime} \in \mathcal{R}_{\Phi^{c}\left(M, \mathcal{F}_{1}\right)}^{\beta I}$. Since $p^{\prime}, p_{1} \in \mathcal{R}_{\Phi^{c}\left(M, \mathcal{F}_{1}\right)}^{\beta I}$, by lemma 1, $p^{\prime}=p_{1}$. So, by lemma 2.2.9, $\Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)=\Phi^{c}\left(M^{\prime}, \mathcal{F}_{1}^{\prime}\right)$. By lemma 7.2.1d, $\mathcal{F}^{\prime}=\mathcal{F}_{1}^{\prime}$ and $\mathcal{F}_{1}^{\prime}=$ $\left|\left\langle\Phi^{c}\left(M^{\prime}, \mathcal{F}_{1}^{\prime}\right), \mathcal{R}_{\Phi^{c}\left(M^{\prime}, \mathcal{F}_{1}^{\prime}\right)}^{\beta I}\right\rangle\right|^{c}$.

By lemma 7.3 there exists a unique set $\mathcal{F}_{2}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta I}$, such that $\Phi^{c}\left(M, \mathcal{F}_{2}\right) \xrightarrow{p_{2}} \beta I \Phi^{c}\left(M^{\prime}, \mathcal{F}_{2}^{\prime}\right)$ and $\left|\left\langle\Phi^{c}\left(M, \mathcal{F}_{2}\right), p_{2}\right\rangle\right|^{c}=p_{0}$.
By lemma 2.2.8, $p_{2} \in \Phi^{c}\left(M, \mathcal{F}_{2}\right)$. By lemma 7.2.1d, $\mathcal{F}_{2}^{\prime}=\left|\left\langle\Phi^{c}\left(M^{\prime}, \mathcal{F}_{2}^{\prime}\right), \mathcal{R}_{\Phi^{c}\left(M^{\prime}, \mathcal{F}_{2}^{\prime}\right)}^{\beta I}\right\rangle\right|^{c}$.
Hence, by lemma 5.8.7c, $\mathcal{F}_{1}^{\prime} \subseteq \mathcal{F}_{2}^{\prime}$ and by lemma 7.6.1, $\left\langle M, \mathcal{F}_{2}\right\rangle \rightarrow_{\beta I d}\left\langle M^{\prime}, \mathcal{F}_{2}^{\prime}\right\rangle$.
$\operatorname{Proof}(L e m m a ~ 7.7): \quad$ If $M \xrightarrow{\mathcal{F}_{1}} \beta$ BId $M_{1}$ and $M \xrightarrow{\mathcal{F}}_{\beta I d} M_{2}$, then there exists $\mathcal{F}_{1}^{\prime \prime}, \mathcal{F}_{2}^{\prime \prime}$ such that $\left\langle M, \mathcal{F}_{1}\right\rangle \rightarrow_{\beta I d}^{*}$ $\left\langle M_{1}, \mathcal{F}_{1}^{\prime \prime}\right\rangle$ and $\left\langle M, \mathcal{F}_{2}\right\rangle \rightarrow_{\beta I d}^{*}\left\langle M_{2}, \mathcal{F}_{2}^{\prime \prime}\right\rangle$. By definitions 7.4 and $7.5, \mathcal{F}_{1}^{\prime \prime} \subseteq \mathcal{R}_{M_{1}}^{\beta I}$ and $\mathcal{F}_{2}^{\prime \prime} \subseteq \mathcal{R}_{M_{2}}^{\beta I}$. Note that by definition 7.5 and lemma 2.2.4, $M_{1}, M_{2} \in \Lambda \mathrm{I}$. By lemma 2, there exist $\mathcal{F}_{1}^{\prime \prime \prime} \subseteq \mathcal{R}_{M_{1}}^{\beta I}$ and $\mathcal{F}_{2}^{\prime \prime \prime} \subseteq \mathcal{R}_{M_{2}}^{\beta I}$ such that $\left\langle M, \mathcal{F}_{1} \cup \mathcal{F}_{2}\right\rangle \rightarrow_{\beta I d}^{*}\left\langle M_{1}, \mathcal{F}_{1}^{\prime \prime} \cup \mathcal{F}_{1}^{\prime \prime \prime}\right\rangle$ and $\left\langle M, \mathcal{F}_{1} \cup \mathcal{F}_{2}\right\rangle \rightarrow_{\beta I d}^{*}\left\langle M_{2}, \mathcal{F}_{2}^{\prime \prime} \cup \mathcal{F}_{2}^{\prime \prime \prime}\right\rangle$. By lemma 7.6.1, $T \rightarrow{ }_{\beta I}^{*} T_{1}$ and $T \rightarrow{ }_{\beta I}^{*} T_{2}$ where $T=\Phi^{c}\left(M, \mathcal{F}_{1} \cup \mathcal{F}_{2}\right), T_{1}=\Phi^{c}\left(M_{1}, \mathcal{F}_{1}^{\prime \prime} \cup \mathcal{F}_{1}^{\prime \prime \prime}\right)$ and $T_{2}=\Phi^{c}\left(M_{2}, \mathcal{F}_{2}^{\prime \prime} \cup \mathcal{F}_{2}^{\prime \prime \prime}\right)$. Since by lemma 7.2.1b, $T \in \Lambda \mathrm{I}_{c}$ and by lemma 6.6.1, $T$ is typable in the type system $\mathcal{D}_{I}$, so $T \in \mathrm{CR}^{\beta I}$ by corollary 6.5 . So, by lemma 2.2 b , there exists $T_{3} \in \Lambda \mathrm{I}_{c}$, such that $T_{1} \rightarrow_{\beta I}^{*}$ $T_{3}$ and $T_{2} \rightarrow_{\beta I}^{*} T_{3}$. Let $\mathcal{F}_{3}=\left|\left\langle T_{3}, \mathcal{R}_{T_{3}}^{\beta I}\right\rangle\right|^{c}$ and $M_{3}=\left|T_{3}\right|^{\beta I}$, then by lemma 7.2.2b, $T_{3}=\Phi^{c}\left(M_{3}, \mathcal{F}_{3}\right)$. Hence, by lemma 7.6.1, $\left\langle M_{1}, \mathcal{F}_{1}^{\prime \prime} \cup \mathcal{F}_{1}^{\prime \prime \prime}\right\rangle \rightarrow_{\beta I d}^{*}\left\langle M_{3}, \mathcal{F}_{3}\right\rangle$ and $\left\langle M_{2}, \mathcal{F}_{2}^{\prime \prime} \cup \mathcal{F}_{2}^{\prime \prime \prime}\right\rangle \rightarrow_{\beta I d}^{*}\left\langle M_{3}, \mathcal{F}_{3}\right\rangle$, i.e. $M_{1} \xrightarrow{\mathcal{F}_{1}^{\prime \prime} \cup \mathcal{F}_{1}^{\prime \prime \prime}}{ }_{\beta I d} M_{3}$ and $M_{2} \xrightarrow{\mathcal{F}_{2}^{\prime \prime} \cup \mathcal{F}_{2}^{\prime \prime \prime}}{ }_{\beta I d} M_{3}$.

Proof(Lemma 7.9.1): Note that $\varnothing \subseteq \mathcal{R}_{M}^{\beta I}$. We prove this statement by induction on the structure of M.

- Let $M \in \mathcal{V}$ then $\Phi^{c}(M, \varnothing)=M$ and $\mathcal{R}_{M}^{\beta I}=\varnothing$ by lemma 5.3.
- Let $M=\lambda x . N$ such that $x \neq c$ then $\Phi^{c}(M, \varnothing)=\lambda x \cdot \Phi^{c}(N, \varnothing)$. By IH, $\mathcal{R}_{\Phi^{c}(N, \varnothing)}^{\beta I}=\varnothing$ and by lemma 5.3, $\mathcal{R}_{\Phi^{c}(M, \varnothing)}^{\beta I}=\varnothing$.
- Let $M=M_{1} M_{2}$ then $\Phi^{c}(M, \varnothing)=c \Phi^{c}\left(M_{1}, \varnothing\right) \Phi^{c}\left(M_{2}, \varnothing\right)$. By IH, $\mathcal{R}_{\Phi^{c}\left(M_{1}, \varnothing\right)}^{\beta I}=\varnothing$ and $\mathcal{R}_{\Phi^{c}\left(M_{2}, \varnothing\right)}^{\beta I}=\varnothing$ and by lemma 5.3, $\mathcal{R}_{\Phi^{c}(M, \varnothing)}^{\beta I}=\varnothing$.

Proof(Lemma 7.9.2): We prove the statement by induction on the structure of $M$.

- let $M \in \mathcal{V}$, then $\Phi^{c}(M, \varnothing)=M$.
- Either $M=x$, then $\Phi^{c}(M, \varnothing)\left[x:=\Phi^{c}(N, \varnothing)\right]=\Phi^{c}(N, \varnothing)$ and by lemma $1, \mathcal{R}_{\Phi^{c}(N, \varnothing)}^{\beta I}=$ $\varnothing$.
- $\operatorname{Or} M \neq x$, then $\Phi^{c}(M, \varnothing)\left[x:=\Phi^{c}(N, \varnothing)\right]=M$ and by lemma 5.3, $\mathcal{R}_{M}^{\beta I}=\varnothing$.
- Let $M=\lambda y \cdot M^{\prime}$ such that $y \neq c$ then $\Phi^{c}(M, \varnothing)=\lambda y \cdot \Phi^{c}\left(M^{\prime}, \varnothing\right)$. So, $\mathcal{R}_{\Phi^{c}(M, \varnothing)\left[x:=\Phi^{c}(N, \varnothing)\right]}^{\beta I}=$ $\mathcal{R}_{\lambda y . \Phi^{c}\left(M^{\prime}, \varnothing\right)\left[x:=\Phi^{c}(N, \varnothing)\right]}^{\beta I}$ such that $y \notin \mathrm{fv}\left(\Phi^{c}(N, \varnothing)\right) \cup\{x\}$. By IH, $\mathcal{R}_{\Phi^{c}\left(M^{\prime}, \varnothing\right)\left[x:=\Phi^{c}(N, \varnothing)\right]}^{\beta I}=\varnothing$. By lemma 5.3, $\mathcal{R}_{\Phi^{c}(M, \varnothing)\left[x:=\Phi^{c}(N, \varnothing)\right]}^{\beta I}=\varnothing$.
- Let $M=M_{1} M_{2}$ then $\Phi^{c}(M, \varnothing)=c \Phi^{c}\left(M_{1}, \varnothing\right) \Phi^{c}\left(M_{2}, \varnothing\right)$.

So, $\mathcal{R}_{\Phi^{c}(M, \varnothing)\left[x:=\Phi^{c}(N, \varnothing)\right]}^{\beta I}=\mathcal{R}_{c \Phi^{c}\left(M M_{1}, \varnothing\right)\left[x:=\Phi^{c}(N, \varnothing)\right] \Phi^{c}\left(M_{2}, \varnothing\right)\left[x:=\Phi^{c}(N, \varnothing)\right]}^{\beta I}$.
By IH, $\mathcal{R}_{\Phi^{c}\left(M_{1}, \varnothing\right)\left[x:=\Phi^{c}(N, \varnothing)\right]}^{\beta I}=\mathcal{R}_{\Phi^{c}\left(M_{2}, \varnothing\right)\left[x:=\Phi^{c}(N, \varnothing)\right]}^{\beta I}=\varnothing$
and by lemma 5.3, $\mathcal{R}_{\Phi^{c}(M, \varnothing)\left[x:=\Phi^{c}(N, \varnothing)\right]}^{\beta I}=\varnothing$.

Proof(Lemma 7.9.3): We prove the statement by induction on the structure of $M$.

- Let $M \in \mathcal{V}$ then by lemma $5.3, \mathcal{R}_{M}^{\beta I}=\varnothing$.
- Let $M=\lambda x . N$ such that $x \neq c$ then by lemma 5.3, $\mathcal{R}_{M}^{\beta I}=\left\{1 . p \mid p \in \mathcal{R}_{N}^{\beta I}\right\}$. Let $p \in \mathcal{R}_{M}^{\beta I}$, then $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{N}^{\beta I}$. Then, $\Phi^{c}(M,\{p\})=\lambda x . \Phi^{c}\left(N,\left\{p^{\prime}\right\}\right)$ By lemma 5.3, $\mathcal{R}_{\Phi^{c}(M,\{p\})}^{\beta I}=$ $\left\{1 . p \mid p \in \mathcal{R}_{\Phi^{c}\left(N,\left\{p^{\prime}\right\}\right)}^{\beta I}\right\}$. So, By lemma 2.2.8, if $\Phi^{c}(M,\{p\}){\xrightarrow{p_{0}}}_{\beta I} P$ then $p_{0}=1 . p_{1}, P=\lambda x . P^{\prime}$ and $\Phi^{c}\left(N,\left\{p^{\prime}\right\}\right){\xrightarrow{p_{1}}}_{\beta I} P^{\prime}$. By IH, $\mathcal{R}_{P^{\prime}}^{\beta I}=\varnothing$, so by lemma 5.3, $\mathcal{R}_{P}^{\beta I}=\varnothing$.
- Let $M=M_{1} M_{2}$.
- Let $M \in \mathcal{R}^{\beta I}$, then $M_{1}=\lambda x . M_{0}$ and by lemma 5.3, $\mathcal{R}_{M}^{\beta I}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{M_{1}}^{\beta I}\right\} \cup\{2 . p \mid$ $\left.p \in \mathcal{R}_{M_{2}}^{\beta I}\right\}$.
* Either $p=0$ then $\Phi^{c}(M,\{0\})=\Phi^{c}\left(M_{1}, \varnothing\right) \Phi^{c}\left(M_{2}, \varnothing\right)$. By lemma 1, $\mathcal{R}_{\Phi^{c}\left(M_{1}, \varnothing\right)}^{\beta I}=$ $\mathcal{R}_{\Phi^{c}\left(M_{2}, \varnothing\right)}^{\beta I}=\varnothing$. Because $\Phi^{c}(M,\{0\}) \rightarrow_{\beta I} M^{\prime}$ then by definition there exists $p_{0}$ such that $\Phi^{c}(M,\{0\}){\xrightarrow{p_{0}}}_{\beta I} M^{\prime}$. By lemma 2.2.8, $p_{0} \in \mathcal{R}_{\Phi^{c}(M,\{0\})}^{\beta I}$. Because $\Phi^{c}\left(M_{1}, \varnothing\right)=$ $\lambda x . \Phi^{c}\left(M_{0}, \varnothing\right)$ such that $x \neq c$, by lemma 5.3 , we obtain:
$\mathcal{R}_{\Phi^{c}(M,\{0\})}^{\beta I}=\{0\}$ if $\Phi^{c}(M,\{0\}) \in \mathcal{R}^{\beta I}, \mathcal{R}_{\Phi^{c}(M,\{0\})}^{\beta I}=\varnothing$ otherwise. So $p_{0}$ and $\Phi^{c}(M,\{0\}) \in \mathcal{R}^{\beta I}$. Hence, $M^{\prime}=\Phi^{c}\left(M_{0}, \varnothing\right)\left[x:=\Phi^{c}\left(M_{2}, \varnothing\right)\right]$ and by lemma 2, $\mathcal{R}_{\Phi^{c}\left(M_{0}, \varnothing\right)\left[x:=\Phi^{c}\left(M_{2}, \varnothing\right)\right]}^{\beta I}=\varnothing$.
* Or $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{M_{1}}^{\beta I}$. So, $\Phi^{c}(M,\{p\})=c \Phi^{c}\left(M_{1},\left\{p^{\prime}\right\}\right) \Phi^{c}\left(M_{2}, \varnothing\right)$. By lemma 1, $\mathcal{R}_{\Phi^{c}\left(M_{2}, \varnothing\right)}^{\beta I}=\varnothing$. By lemma 5.3, $\mathcal{R}_{\Phi^{c}(M,\{p\})}^{\beta I}=\left\{1.2 . p \mid p \in \mathcal{R}_{\Phi^{c}\left(M_{1},\left\{p^{\prime}\right\}\right)}^{\beta I}\right\}$. So, By lemma 2.2.8, if $\Phi^{c}(M,\{p\}){\xrightarrow{p_{0}}}_{\beta I} M^{\prime}$ then $p_{0}=1.2 \cdot p_{0}^{\prime}, p_{0}^{\prime} \in \mathcal{R}_{\Phi^{c}\left(M_{1},\left\{p^{\prime}\right\}\right)}^{\beta I}$, $M^{\prime}=c M_{1}^{\prime} \Phi^{c}\left(M_{2}, \varnothing\right)$ and $\Phi^{c}\left(M_{1},\left\{p^{\prime}\right\}\right){\xrightarrow{p_{0}^{\prime}}}_{\beta I} M_{1}^{\prime}$. By IH, $\mathcal{R}_{M_{1}^{\prime}}^{\beta I}=\varnothing$ and by lemma 5.3, $\mathcal{R}_{M^{\prime}}^{\beta I}=\varnothing$.
* Or $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{M_{2}}^{\beta I}$. So, $\Phi^{c}(M,\{p\})=c \Phi^{c}\left(M_{1}, \varnothing\right) \Phi^{c}\left(M_{2},\left\{p^{\prime}\right\}\right)$. By lemma 1, $\mathcal{R}_{\Phi^{c}\left(M_{1}, \varnothing\right)}^{\beta I}=\varnothing$. By lemma 5.3, $\mathcal{R}_{\Phi^{c}(M,\{p\})}^{\beta I}=\left\{2 . p \mid p \in \mathcal{R}_{\Phi^{c}\left(M_{2},\left\{p^{\prime}\right\}\right)}^{\beta I}\right\}$.

So, By lemma 2.2.8, if $\Phi^{c}(M,\{p\}) \xrightarrow{p_{0}} \beta M^{\prime} M^{\prime}$ then $p_{0}=2 . p_{0}^{\prime}, p_{0}^{\prime} \in \mathcal{R}_{\Phi^{c}\left(M_{2},\left\{p^{\prime}\right\}\right)}^{\beta I}, M^{\prime}=$ $c \Phi^{c}\left(M_{1}, \varnothing\right) M_{2}^{\prime}$ and $\Phi^{c}\left(M_{2},\left\{p^{\prime}\right\}\right){\xrightarrow{p_{0}^{\prime}}}_{\beta I} M_{2}^{\prime}$. By IH, $\mathcal{R}_{M_{2}^{\prime}}^{\beta I}=\varnothing$ and by lemma 5.3, $\mathcal{R}_{M^{\prime}}^{\beta I}=\varnothing$.

- Let $M \notin \mathcal{R}^{\beta I}$, then by lemma 5.3, $\mathcal{R}_{M}^{\beta I}=\left\{1 . p \mid p \in \mathcal{R}_{M_{1}}^{\beta I}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{M_{2}}^{\beta I}\right\}$.
* Either $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{M_{1}}^{\beta I}$. So, $\Phi^{c}(M,\{p\})=c \Phi^{c}\left(M_{1},\left\{p^{\prime}\right\}\right) \Phi^{c}\left(M_{2}, \varnothing\right)$. By lemma 1, $\mathcal{R}_{\Phi^{c}\left(M_{2}, \varnothing\right)}^{\beta I}=\varnothing$. By lemma 5.3, $\mathcal{R}_{\Phi^{c}(M,\{p\})}^{\beta I}=\left\{1.2 . p \mid p \in \mathcal{R}_{\Phi^{c}\left(M_{1},\left\{p^{\prime}\right\}\right)}^{\beta I}\right\}$. So, By lemma 2.2.8, if $\Phi^{c}(M,\{p\}){\xrightarrow{p_{0}}}_{\beta I} M^{\prime}$ then $p_{0}=1.2 \cdot p_{0}^{\prime}, p_{0}^{\prime} \in \mathcal{R}_{\Phi^{c}\left(M_{1},\left\{p^{\prime}\right\}\right)}^{\beta I}$, $M^{\prime}=c M_{1}^{\prime} \Phi^{c}\left(M_{2}, \varnothing\right)$ and $\Phi^{c}\left(M_{1},\left\{p^{\prime}\right\}\right){\xrightarrow{p_{0}^{\prime}}}_{\beta I} M_{1}^{\prime}$. By IH, $\mathcal{R}_{M_{1}^{\prime}}^{\beta I}=\varnothing$ and by lemma 5.3, $\mathcal{R}_{M^{\prime}}^{\beta I}=\varnothing$.
* Or $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{M_{2}}^{\beta I}$. So, $\Phi^{c}(M,\{p\})=c \Phi^{c}\left(M_{1}, \varnothing\right) \Phi^{c}\left(M_{2},\left\{p^{\prime}\right\}\right)$. By lemma 1, $\mathcal{R}_{\Phi^{c}\left(M_{1}, \varnothing\right)}^{\beta I}=\varnothing$. By lemma 5.3, $\mathcal{R}_{\Phi^{c}(M,\{p\})}^{\beta I}=\left\{2 . p \mid p \in \mathcal{R}_{\Phi^{c}\left(M_{2},\left\{p^{\prime}\right\}\right)}^{\beta I}\right\}$. So, By lemma 2.2.8, if $\Phi^{c}(M,\{p\}){\xrightarrow{p_{0}}}_{\beta I} M^{\prime}$ then $p_{0}=2 . p_{0}^{\prime}, p_{0}^{\prime} \in \mathcal{R}_{\Phi^{c}\left(M_{2},\left\{p^{\prime}\right\}\right),}^{\beta I}, M^{\prime}=$ $c \Phi^{c}\left(M_{1}, \varnothing\right) M_{2}^{\prime}$ and $\Phi^{c}\left(M_{2},\left\{p^{\prime}\right\}\right){\xrightarrow{p_{0}^{\prime}}}_{\beta I} M_{2}^{\prime}$. By IH, $\mathcal{R}_{M_{2}^{\prime}}^{\beta I}=\varnothing$ and by lemma 5.3, $\mathcal{R}_{M^{\prime}}^{\beta I}=\varnothing$.
$\operatorname{Proof}\left(L e m m a\right.$ 7.9.4): $\quad$ By lemma 2.2.8, $p \in \mathcal{R}_{M}^{\beta I}$. By lemma 7.3, there exists a unique set $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta I}$, such that $\Phi^{c}(M,\{p\}) \rightarrow_{\beta I} \Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$. By lemma 3, $\mathcal{R}_{\Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)}^{\beta I}=\varnothing$, so $\left|\left\langle\Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right), \mathcal{R}_{\Phi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)}^{\beta I}\right\rangle\right|^{c}=$ $\varnothing$ and by lemma 7.2.1d, $\mathcal{F}^{\prime}=\varnothing$. Finally, by lemma 7.6.1, $\langle M,\{p\}\rangle \rightarrow_{\beta I d}\left\langle M^{\prime}, \varnothing\right\rangle$.
Proof(Lemma 7.9.5): It is obvious that $\rightarrow_{1 I}^{*} \subseteq \rightarrow_{\beta I}^{*}$. We only prove that $\rightarrow_{\beta I}^{*} \subseteq \rightarrow_{1 I}^{*}$. Let $M, M^{\prime} \in \Lambda \mathrm{I}$ such that $M \rightarrow_{\beta I}^{*} M^{\prime}$. We prove this claim by induction on the length of $M \rightarrow_{\beta I}^{*} M^{\prime}$.
- Let $M=M^{\prime}$ then it is done since $\langle M, \mathcal{F}\rangle \rightarrow_{\beta I d}^{*}\langle M, \mathcal{F}\rangle$ for some $\mathcal{F}$.
- Let $M \rightarrow_{\beta I}^{*} M^{\prime \prime} \rightarrow_{\beta I} M^{\prime}$. By IH, $M \rightarrow_{1 I}^{*} M^{\prime \prime}$. By definition there exists $p$ such that $M^{\prime \prime} \xrightarrow{p}_{\beta I}$ $M^{\prime}$ then by lemma $4\left\langle M^{\prime \prime},\{p\}\right\rangle \rightarrow_{\beta I d}\left\langle M^{\prime}, \varnothing\right\rangle$, so $M^{\prime \prime} \rightarrow_{1 I} M^{\prime}$. Hence $M \rightarrow_{1 I}^{*} M^{\prime \prime} \rightarrow_{1 I} M^{\prime}$.

Proof(Lemma 7.10): Let $M \in \Lambda I$ and $c$ be a variable such that $c \notin \operatorname{fv}(M)$. Assume $M \rightarrow{ }_{\beta I}^{*} M_{1}$ and $M \rightarrow{ }_{\beta I}^{*} M_{2}$. Then by lemma 5, $M \rightarrow{ }_{1 I}^{*} M_{1}$ and $M \rightarrow{ }_{1 I}^{*} M_{2}$. We prove the statement by induction on the length of $M \rightarrow{ }_{1 I}^{*} M_{1}$.

- Let $M=M_{1}$. Hence $M_{1} \rightarrow{ }_{1 I}^{*} M_{2}$ and $M_{2} \rightarrow{ }_{1 I}^{*} M_{2}$.
- Let $M \rightarrow_{1 I}^{*} M_{1}^{\prime} \rightarrow_{1 I} M_{1}$. By IH, $\exists M_{3}^{\prime}, M_{1}^{\prime} \rightarrow_{1 I}^{*} M_{3}^{\prime}$ and $M_{2} \rightarrow_{1 I}^{*} M_{3}^{\prime}$. We prove that $\exists M_{3}, M_{1} \rightarrow_{1 I}^{*} M_{3}$ and $M_{3}^{\prime} \rightarrow_{1 I} M_{3}$, by induction on $M_{1}^{\prime} \rightarrow_{1 I}^{*} M_{3}^{\prime}$.
- let $M_{1}^{\prime}=M_{3}^{\prime}$, hence $M_{3}^{\prime} \rightarrow{ }_{1 I} M_{1}$ and $M_{1} \rightarrow{ }_{1 I}^{*} M_{1}$.
- Let $M_{1}^{\prime} \rightarrow_{1 I}^{*} M_{3}^{\prime \prime} \rightarrow_{1 I} M_{3}^{\prime}$. By IH, $\exists M_{3}^{\prime \prime \prime}, M_{1} \rightarrow_{1 I}^{*} M_{3}^{\prime \prime \prime}$ and $M_{3}^{\prime \prime} \rightarrow_{1 I} M_{3}^{\prime \prime \prime}$. By lemma 2.2.4, $c \notin \operatorname{fv}\left(M_{3}^{\prime \prime}\right)$. Since $M_{3}^{\prime \prime} \rightarrow_{1 I} M_{3}^{\prime}$ and $M_{3}^{\prime \prime} \rightarrow_{1 I} M_{3}^{\prime \prime \prime}$, by lemma 7.7, $\exists M_{3}, M_{3}^{\prime} \rightarrow_{1 I} M_{3}$ and $M_{3}^{\prime \prime \prime} \rightarrow_{1 I} M_{3}$.

## F. Proofs of section 8

## Proof(Lemma 8.2):

1. 1a. By induction on the structure of $M$.

- Let $M \in \mathcal{V} \backslash\{c\}$, then $\mathcal{F}={ }^{5.3} \varnothing$ and $\Psi_{0}^{c}(M, \varnothing)=\{M\}=\left\{c^{0}(M)\right\} \subseteq \Psi^{c}(M, \varnothing)$.
- Let $M=\lambda x . N$ such that $x \neq c$ and $\mathcal{F}^{\prime}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq^{5.3} \mathcal{R}_{N}^{\beta \eta}$.
- If $0 \in \mathcal{F}$ then $\Psi_{0}^{c}(M, \mathcal{F})=\left\{\lambda x . N^{\prime} \mid N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}^{\prime}\right)\right\}=\left\{c^{0}\left(\lambda x . N^{\prime}\right) \mid N^{\prime} \in\right.$ $\left.\Psi_{0}^{c}\left(N, \mathcal{F}^{\prime}\right)\right\} \subseteq \Psi^{c}(M, \mathcal{F})$.
- Else $\Psi_{0}^{c}(M, \mathcal{F})=\left\{\lambda x . N^{\prime}[x:=c(c x)] \mid N^{\prime} \in \Psi^{c}\left(N, \mathcal{F}^{\prime}\right)\right\}=\left\{c^{0}\left(\lambda x \cdot N^{\prime}[x:=\right.\right.$ $\left.c(c x)]) \mid N^{\prime} \in \Psi^{c}\left(N, \mathcal{F}^{\prime}\right)\right\} \subseteq \Psi^{c}(M, \mathcal{F})$.
- Let $M=N P, \mathcal{F}_{1}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq^{5.3} \mathcal{R}_{N}^{\beta \eta}$ and $\mathcal{F}_{2}=\{p \mid 2 . p \in \mathcal{F}\} \subseteq^{5.3} \mathcal{R}_{P}^{\beta \eta}$.
- If $0 \in \mathcal{F}$ then $\Psi_{0}^{c}(M, \mathcal{F})=\left\{N^{\prime} P^{\prime} \mid N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}_{1}\right) \wedge P^{\prime} \in \Psi_{0}^{c}\left(P, \mathcal{F}_{2}\right)\right\}=$ $\left\{c^{0}\left(N^{\prime} P^{\prime}\right) \mid N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}_{1}\right) \wedge P^{\prime} \in \Psi_{0}^{c}\left(P, \mathcal{F}_{2}\right)\right\}$. By IH, $\Psi_{0}^{c}\left(P, \mathcal{F}_{2}\right) \subseteq \Psi^{c}\left(P, \mathcal{F}_{2}\right)$, so by definition, $\Psi_{0}^{c}(M, \mathcal{F}) \subseteq \Psi^{c}(M, \mathcal{F})$.
- Else $\Psi_{0}^{c}(M, \mathcal{F})=\left\{c N^{\prime} P^{\prime} \mid N^{\prime} \in \Psi^{c}\left(N, \mathcal{F}_{1}\right) \wedge P^{\prime} \in \Psi_{0}^{c}\left(P, \mathcal{F}_{2}\right)\right\}$ $=\left\{c^{0}\left(c N^{\prime} P^{\prime}\right) \mid N^{\prime} \in \Psi^{c}\left(N, \mathcal{F}_{1}\right) \wedge P^{\prime} \in \Psi_{0}^{c}\left(P, \mathcal{F}_{2}\right)\right\}$. By $\mathrm{IH}, \Psi_{0}^{c}\left(P, \mathcal{F}_{2}\right) \in$ $\Psi^{c}\left(P, \mathcal{F}_{2}\right)$, so by definition, $\Psi_{0}^{c}(M, \mathcal{F}) \subseteq \Psi^{c}(M, \mathcal{F})$.
1b. By induction on the structure of $M$.
- Let $M \in \mathcal{V} \backslash\{c\}$, then $\mathcal{F}=\varnothing, \Psi^{c}(M, \mathcal{F})=\left\{c^{n}(M) \mid n \geq 0\right\}$ and $\forall N \in \Psi^{c}(M, \mathcal{F}) . \operatorname{fv}(M)=\{M\}=\operatorname{fv}(N) \backslash\{c\}$.
- Let $M=\lambda x . N$ such that $x \neq x$ and $\mathcal{F}^{\prime}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{N}^{\beta \eta}$.
- If $0 \in \mathcal{F}$ then $\Psi^{c}(M, \mathcal{F})=\left\{c^{n}\left(\lambda x . N^{\prime}\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}^{\prime}\right)\right\}$. Let $P \in$ $\Psi^{c}(M, \mathcal{F})$, so $\exists n \geq 0$ and $N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}^{\prime}\right)$ such that $P=c^{n}\left(\lambda x . N^{\prime}\right)$. Hence, $\mathrm{fv}(M)=\mathrm{fv}(N) \backslash\{x\}=^{I H, 1 a} \mathrm{fv}\left(N^{\prime}\right) \backslash\{c, x\}=\mathrm{fv}(P) \backslash\{c\}$.
- Else $\Psi^{c}(M, \mathcal{F})=\left\{c^{n}\left(\lambda x . N^{\prime}[x:=c(c x)]\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi^{c}\left(N, \mathcal{F}^{\prime}\right)\right\}$. Let $P \in \Psi^{c}(M, \mathcal{F})$, so $\exists n \geq 0$ and $\exists N^{\prime} \in \Psi^{c}\left(N, \mathcal{F}^{\prime}\right)$ such that, $P=c^{n}\left(\lambda x . N^{\prime}[x:=\right.$ $c(c x)])$. Hence, $\mathrm{fv}(M)=\mathrm{fv}(N) \backslash\{x\}={ }^{I H} \mathrm{fv}\left(N^{\prime}\right) \backslash\{c, x\}=\mathrm{fv}(P) \backslash\{c\}$.
- Let $M=M_{1} M_{2}, \mathcal{F}_{1}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{M_{1}}^{\beta \eta}$ and $\mathcal{F}_{2}=\{p \mid 2 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{M_{2}}^{\beta \eta}$.
- If $0 \in \mathcal{F}$ then, $\Psi^{c}(M, \mathcal{F})=$
$\left\{c^{n}\left(N^{\prime} P^{\prime}\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi_{0}^{c}\left(M_{1}, \mathcal{F}_{1}\right) \wedge P^{\prime} \in \Psi^{c}\left(M_{2}, \mathcal{F}_{2}\right)\right\}$. Let $P \in \Psi^{c}(M, \mathcal{F})$,
so $\exists n \geq 0, N^{\prime} \in \Psi_{0}^{c}\left(M_{1}, \mathcal{F}_{1}\right)$ and $P^{\prime} \in \Psi^{c}\left(M_{2}, \mathcal{F}_{2}\right)$ such that $P=c^{n}\left(N^{\prime} P^{\prime}\right)$.
Hence, $\mathrm{fv}(M)=\mathrm{fv}\left(M_{1}\right) \cup \mathrm{fv}\left(M_{2}\right)=^{I H, 1 a}\left(\mathrm{fv}\left(N^{\prime}\right) \backslash\{c\}\right) \cup\left(\mathrm{fv}\left(P^{\prime}\right) \backslash\{c\}\right)=$ $\left(\mathrm{fv}\left(N^{\prime}\right) \cup \mathrm{fv}\left(P^{\prime}\right)\right) \backslash\{c\}=\mathrm{fv}(P) \backslash\{c\}$.
- Else $\Psi^{c}(M, \mathcal{F})=\left\{c^{n}\left(c N^{\prime} P^{\prime}\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi^{c}\left(M_{1}, \mathcal{F}_{1}\right) \wedge P^{\prime} \in \Psi^{c}\left(M_{2}, \mathcal{F}_{2}\right)\right\}$. Let $P \in \Psi^{c}(M, \mathcal{F})$, so $\exists n \geq 0, N^{\prime} \in \Psi^{c}\left(M_{1}, \mathcal{F}_{1}\right)$ and $P^{\prime} \in \Psi^{c}\left(M_{2}, \mathcal{F}_{2}\right)$ such that $P=c^{n}\left(c N^{\prime} P^{\prime}\right)$. Hence, $\mathrm{fv}(M)=\mathrm{fv}\left(M_{1}\right) \cup \mathrm{fv}\left(M_{2}\right)={ }^{I H}\left(\mathrm{fv}\left(N^{\prime}\right) \cup f v\left(P^{\prime}\right)\right) \backslash\{c\}=$ $\mathrm{fv}(P) \backslash\{c\}$.
1c. By induction on the structure of $M$.
- If $M \in \mathcal{V} \backslash\{c\}$ then $\mathcal{F}=\varnothing$ and $\Psi^{c}(M, \mathcal{F})=\left\{c^{n}(M) \mid n \geq 0\right\}$. Use lemma 5.2.7.
- Let $M=\lambda x . N$ such that $x \neq c$ and $\mathcal{F}^{\prime}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{N}^{\beta \eta}$.
- If $0 \in \mathcal{F}$, then $N=P x$ such that $x \notin \operatorname{fv}(P)$ and $\Psi^{c}(M, \mathcal{F})=\left\{c^{n}\left(\lambda x . N^{\prime}\right) \mid n \geq\right.$ $\left.0 \wedge N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}^{\prime}\right)\right\}$. Let $\mathcal{F}^{\prime \prime}=\left\{p \mid 1 . p \in \mathcal{F}^{\prime}\right\} \subseteq^{5.3} \mathcal{R}_{P}^{\beta \eta}$.
* If $0 \in \mathcal{F}^{\prime}$ then, $\Psi_{0}^{c}\left(N, \mathcal{F}^{\prime}\right)=\left\{P^{\prime} x \mid P^{\prime} \in \Psi_{0}^{c}\left(P, \mathcal{F}^{\prime \prime}\right)\right\}$. Let $M^{\prime} \in \Psi^{c}(M, \mathcal{F})$, so $M^{\prime}=c^{n}\left(\lambda x \cdot P^{\prime} x\right)$ where $n \geq 0$ and $P^{\prime} \in \Psi_{0}^{c}\left(P, \mathcal{F}^{\prime \prime}\right)$. Since $x \notin \mathrm{fv}(P)$, by lemmas 8.2.1b and 8.2.1a, $x \notin \mathrm{fv}\left(P^{\prime}\right)$. By IH and lemma 8.2.1a, $P^{\prime}, P^{\prime} x \in \Lambda \eta_{c}$. By lemma 5.2, $P^{\prime} \neq c$. Hence, by $(R 1) .4, \lambda x \cdot P^{\prime} x \in \Lambda \eta_{c}$. We conclude using lemma 5.2.7.
* Else $\Psi_{0}^{c}\left(N, \mathcal{F}^{\prime}\right)=\left\{c P^{\prime} x \mid P^{\prime} \in \Psi^{c}\left(P, \mathcal{F}^{\prime \prime}\right)\right\}$. Let $M^{\prime} \in \Psi^{c}(M, \mathcal{F})$, so $M^{\prime}=$ $c^{n}\left(\lambda x . c P^{\prime} x\right)$ where $n \geq 0$ and $P^{\prime} \in \Psi^{c}\left(P, \mathcal{F}^{\prime \prime}\right)$. Since $x \notin \mathrm{fv}(P)$, by lemmas 8.2.1b, $x \notin \mathrm{fv}\left(P^{\prime}\right)$, so $x \notin \mathrm{fv}\left(c P^{\prime}\right)$. By IH and lemma 8.2.1a, $c P^{\prime} x \in \Lambda \eta_{c}$. Since $c P^{\prime} \neq c$, by $(R 1) .4, \lambda x . c P^{\prime} x \in \Lambda \eta_{c}$. We conclude using lemma 5.2.7.
- Else $\Psi^{c}(M, \mathcal{F})=\left\{c^{n}\left(\lambda x . N^{\prime}[x:=c(c x)]\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi^{c}\left(N, \mathcal{F}^{\prime}\right)\right\}$. Let $N^{\prime} \in \Psi^{c}\left(N, \mathcal{F}^{\prime}\right)$ and $n \geq 0$. Since by IH $N^{\prime} \in \Lambda \eta_{c}$, by lemma 5.2.7 and ( $R 1$ ).3, $c^{n}\left(\lambda x \cdot N^{\prime}[x:=c(c x)]\right) \in \Lambda \eta_{c}$.
- Let $M=N P, \mathcal{F}_{1}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{N}^{\beta \eta}$ and $\mathcal{F}_{2}=\{p \mid 2 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{P}^{\beta \eta}$.
- If $0 \in \mathcal{F}$ then $\Psi^{c}(M, \mathcal{F})=\left\{c^{n}\left(N^{\prime} P^{\prime}\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}_{1}\right) \wedge P^{\prime} \in\right.$ $\left.\Psi^{c}\left(P, \mathcal{F}_{2}\right)\right\}$. Let $P=c^{n}\left(N^{\prime} P^{\prime}\right) \in \Psi^{c}(M, \mathcal{F})$ such that $n \geq 0, N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}_{1}\right)$ and $P^{\prime} \in \Psi^{c}\left(P, \mathcal{F}_{2}\right)$. By IH and lemma 8.2.1a, $N^{\prime}, P^{\prime} \in \Lambda \eta_{c}$. Since $N$ is a $\lambda$-abstraction then by definition $N^{\prime}$ too. Hence, by $(R 3), N^{\prime} P^{\prime} \in \Lambda \eta_{c}$. By lemma 5.2.7, $c^{n}\left(N^{\prime} P^{\prime}\right) \in \Lambda \eta_{c}$.
- Else $\Psi^{c}(M, \mathcal{F})=\left\{c^{n}\left(c N^{\prime} P^{\prime}\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi^{c}\left(N, \mathcal{F}_{1}\right) \wedge P^{\prime} \in \Psi^{c}\left(P, \mathcal{F}_{2}\right)\right\}$. Let $c^{n}\left(c N^{\prime} P^{\prime}\right) \in \Psi^{c}(M, \mathcal{F})$ such that $n \geq 0, N^{\prime} \in \Psi^{c}\left(N, \mathcal{F}_{1}\right)$ and $P^{\prime} \in \Psi^{c}\left(P, \mathcal{F}_{2}\right)$. By IH, $N^{\prime}, P^{\prime} \in \Lambda \eta_{c}$. Hence by $(R 2), c N^{\prime} P^{\prime} \in \Lambda \eta_{c}$ and by lemma 5.2.7, $c^{n}\left(c N^{\prime} P^{\prime}\right) \in \Lambda \eta_{c}$.
1d. We prove this lemma by case on the belonging of 0 in $\mathcal{F}$. Let $\mathcal{F}^{\prime}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{N}^{\beta \eta}$.
- If $0 \in \mathcal{F}$ then $\Psi_{0}^{c}(N x, \mathcal{F})=\left\{N^{\prime} x \mid N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}^{\prime}\right)\right\}$. Hence, $P=N^{\prime} x$ such that $N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}^{\prime}\right)$. Since $x \notin \mathrm{fv}(N)$, by lemmas 8.2.1b and 8.2.1a, $x \notin \mathrm{fv}\left(N^{\prime}\right)$. So $\lambda x . P=\lambda x . N^{\prime} x \in \mathcal{R}^{\beta \eta}$ and by lemma 5.3, $\mathcal{R}_{\lambda x . P}^{\beta \eta}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{P}^{\beta \eta}\right\}$.
- Else $\Psi_{0}^{c}(N x, \mathcal{F})=\left\{c N^{\prime} x \mid N^{\prime} \in \Psi^{c}\left(N, \mathcal{F}^{\prime}\right)\right\}$ and $P=c N^{\prime} x$ such that $N^{\prime} \in$ $\Psi^{c}\left(N, \mathcal{F}^{\prime}\right)$. Since $x \notin \mathrm{fv}(N)$, by lemmas 8.2.1b, $x \notin \mathrm{fv}\left(N^{\prime}\right)$ and so $x \notin \mathrm{fv}\left(c N^{\prime}\right)$. Since $\lambda x . c N^{\prime} x \in \mathcal{R}^{\beta \eta}$, by lemma 5.3, $\mathcal{R}_{\lambda x . P}^{\beta \eta}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{P}^{\beta \eta}\right\}$.
1e. Let $\mathcal{F}_{1}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{N}^{\beta \eta}$ and $\mathcal{F}_{2}=\{p \mid 2 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{x}^{\beta \eta}=^{5.3} \varnothing$. We prove this lemma by case on the belonging of 0 in $\mathcal{F}$.
- If $0 \in \mathcal{F}$ then $\Psi^{c}(N x, \mathcal{F})=\left\{c^{n}\left(N^{\prime} Q\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}_{1}\right) \wedge Q \in \Psi^{c}\left(x, \mathcal{F}_{2}\right)\right\}$. So $P x=c^{n}\left(N^{\prime} Q\right)$ such that $n \geq 0, N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}_{1}\right)$ and $Q \in \Psi^{c}\left(x, \mathcal{F}_{2}\right)$. So $n=0$, $N^{\prime}=P$ and $Q=x$. Since $x \in \Psi_{0}^{c}(x, \varnothing), P x \in \Psi_{0}^{c}(N x, \mathcal{F})$.
- Else $\Psi^{c}(N x, \mathcal{F})=\left\{c^{n}\left(c N^{\prime} Q\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}_{1}\right) \wedge Q \in \Psi^{c}\left(x, \mathcal{F}_{2}\right)\right\}$. So $P x=c^{n}\left(c N^{\prime} Q\right)$ such that $n \geq 0, N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}_{1}\right)$ and $Q \in \Psi^{c}\left(x, \mathcal{F}_{2}\right)$. So $n=0$, $c N^{\prime}=P$ and $Q=x$. Since $x \in \Psi_{0}^{c}(x, \varnothing), P x \in \Psi_{0}^{c}(N x, \mathcal{F})$.
1f. Easy by case on the structure of $M$ and induction on $n$.
1 g . By induction on the structure of $M$.
- Let $M \in \mathcal{V} \backslash\{c\}$. Then $\Psi^{c}(M, \mathcal{F})=\left\{c^{n}(M) \mid n \geq 0\right\}$ and $\mathcal{F}=\varnothing$. Now, use lemma 1 .
- Let $M=\lambda x . N$ such that $x \neq c$ and $\mathcal{F}^{\prime}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{N}^{\beta \eta}$.
- If $0 \in \mathcal{F}$ then $\Psi^{c}(M, \mathcal{F})=\left\{c^{n}\left(\lambda x . N^{\prime}\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}^{\prime}\right)\right\}$. Let $c^{n}\left(\lambda x . N^{\prime}\right) \in \Psi^{c}(M, \mathcal{F})$ where $n \geq 0$ and $N^{\prime} \in \Psi_{0}^{c}\left(N, \mathcal{F}^{\prime}\right)$. Then, $\left|c^{n}\left(\lambda x . N^{\prime}\right)\right|^{c}={ }^{1}$ $\left|\lambda x \cdot N^{\prime}\right|^{c}=\lambda x \cdot\left|N^{\prime}\right|^{c}={ }^{I H, 1 a} \lambda x . N$.
- Else $\Psi^{c}(M, \mathcal{F})=\left\{c^{n}\left(\lambda x . N^{\prime}[x:=c(c x)]\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi^{c}\left(N, \mathcal{F}^{\prime}\right)\right\}$. Let $c^{n}\left(\lambda x . N^{\prime}[x:=c(c x)]\right) \in \Psi^{c}(M, \mathcal{F})$ where $n \geq 0$ and $N^{\prime} \in \Psi^{c}\left(N, \mathcal{F}^{\prime}\right)$. Then, $\left|c^{n}\left(\lambda x \cdot N^{\prime}[x:=c(c x)]\right)\right|^{c}={ }^{1}\left|\lambda x \cdot N^{\prime}[x:=c(c x)]\right|^{c}=\lambda x \cdot\left|N^{\prime}[x:=c(c x)]\right|^{c}=^{2}$ $\lambda x .\left|N^{\prime}\right|^{c}={ }^{I H} \lambda x . N$.
- Let $M=M_{1} M_{2}, \mathcal{F}_{1}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{M_{1}}^{\beta \eta}$ and $\mathcal{F}_{2}=\{p \mid 2 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{M_{2}}^{\beta \eta}$.
- If 0 then $\Psi^{c}(M, \mathcal{F})=\left\{c^{n}\left(N^{\prime} P^{\prime}\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi_{0}^{c}\left(M_{1}, \mathcal{F}_{1}\right) \wedge P^{\prime} \in \Psi^{c}\left(M_{2}, \mathcal{F}_{2}\right)\right\}$. Let $c^{n}\left(N^{\prime} P^{\prime}\right) \in \Psi^{c}(M, \mathcal{F})$ where $n \geq 0, N^{\prime} \in \Psi_{0}^{c}\left(M_{1}, \mathcal{F}_{1}\right)$ and $P^{\prime} \in \Psi^{c}\left(M_{2}, \mathcal{F}_{2}\right)$. Since $M_{1}$ is a $\lambda$-abstraction, by definition $N^{\prime}$ too. Then, $\left|c^{n}\left(N^{\prime} P^{\prime}\right)\right|^{c}={ }^{1}\left|N^{\prime} P^{\prime}\right|^{c}=$ $\left|N^{\prime}\right| c\left|P^{\prime}\right|^{c}={ }^{I H, 1 a} M_{1} M_{2}$.
- Else $\Psi^{c}(M, \mathcal{F})=\left\{c^{n}\left(c P_{1} P_{2}\right) \mid n \geq 0 \wedge P_{1} \in \Psi^{c}\left(M_{1}, \mathcal{F}_{1}\right) \wedge P_{2} \in \Psi^{c}\left(M_{2}, \mathcal{F}_{2}\right)\right\}$. Let $c^{n}\left(c P_{1} P_{2}\right) \in \Psi^{c}(M, \mathcal{F})$ where $n \geq 0, P_{1} \in \Psi^{c}\left(M_{1}, \mathcal{F}_{1}\right)$ and $P_{2} \in \Psi^{c}\left(M_{2}, \mathcal{F}_{2}\right)$. Then $\left|c^{n}\left(c P_{1} P_{2}\right)\right|^{c}={ }^{1}\left|c P_{1} P_{2}\right|^{c}=\left|c P_{1}\right|^{c}\left|P_{2}\right|^{c}=\left|P_{1}\right|^{c}\left|P_{2}\right|^{c}={ }^{I H} M_{1} M_{2}$.
1 h . We prove the statement by induction on $M$.
- Let $M \in \mathcal{V} \backslash\{c\}$. Then $\Psi^{c}(M, \mathcal{F})=\left\{c^{n}(x) \mid n \geq 0\right\}$ and $\mathcal{F}=\varnothing$. If $P \in \Psi^{c}(M, \mathcal{F})$ then $\mathcal{R}_{P}^{\beta \eta}={ }^{5.4 .5} \varnothing$. Hence, $\mathcal{F}=\left|\left\langle P, \mathcal{R}_{P}^{\beta \eta}\right\rangle\right|^{c}$.
- Let $M=\lambda x . N$ such that $x \neq c$ and $\mathcal{F}^{\prime}=\{p \mid 1 . p \in \mathcal{F}\} \subseteq \mathcal{R}_{N}^{\beta \eta}$.
- If $0 \in \mathcal{F}$ then $N=P x$ where $x \notin \operatorname{fv}(P)$ and $\Psi^{c}(M, \mathcal{F})=\left\{c^{n}\left(\lambda x . $$

2. 2a. By induction on the construction of $M$.

- Let $M \in \mathcal{V} \backslash\{c\}$. So $|M|^{c}=M$, by lemma 5.3, $\mathcal{R}_{M}^{\beta \eta}=\varnothing=\mathcal{R}_{|M|^{c}}^{\beta \eta}$ and $M \in$ $\Psi^{c}\left(|M|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right)=\Psi^{c}(M, \varnothing)=\left\{c^{n}(M) \mid n \geq 0\right\}$.
- Let $M=\lambda x . N[x:=c(c x)]$ such that $x \neq c$ and $N \in \Lambda \eta_{c}$. Then, $|M|^{c}=\lambda x \cdot|N|^{c}$ and $\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}=\left\{|\langle M, p\rangle|^{c} \mid p \in \mathcal{R}_{M}^{\beta \eta}\right\}=^{5.4 .3}\left\{|\langle M, 1 . p\rangle|^{c} \mid p \in \mathcal{R}_{N[x:=c(c x)]}^{\beta \eta}\right\}=^{5.4 .4}$ $\left\{|\langle M, 1 . p\rangle|^{c} \mid p \in \mathcal{R}_{N}^{\beta \eta}\right\}==^{3}\left\{1 .|\langle N, p\rangle|^{c} \mid p \in \mathcal{R}_{N}^{\beta \eta}\right\}=\left\{1 .\left.p|p \in|\left\langle N, \mathcal{R}_{N}^{\beta \eta}\right\rangle\right|^{c}\right\} \subseteq^{I H}$ $\left\{1 . p \mid p \in \mathcal{R}_{|N| c}^{\beta \eta}\right\}={ }^{2}\left\{1 . p \mid p \in \mathcal{R}_{\left.|N[x:=c(c x)]|^{c}\right\}}^{\beta \eta} \subseteq^{5.3} \mathcal{R}_{\lambda x .|N[x:=c(c x)]|^{c}}^{\beta \eta}=\right.$
$\mathcal{R}_{|\lambda x . N[x:=c(c x)]| c}^{\beta \eta}$.
We just proved that $\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle N, \mathcal{R}_{N}^{\beta \eta}\right\rangle\right|^{c}\right\}$, so $0 \notin\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}$ and $\left|\left\langle N, \mathcal{R}_{N}^{\beta \eta}\right\rangle\right|^{c}=\left\{\left.p|1 . p \in|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right\}$. By definition, $\Psi^{c}\left(|M|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right)=$ $\left\{c^{n}\left(\lambda x \cdot N^{\prime}[x:=c(c x)]\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi^{c}\left(|N|^{c},\left|\left\langle N, \mathcal{R}_{N}^{\beta \eta}\right\rangle\right|^{c}\right)\right\}$. By IH, $N \in$ $\Psi^{c}\left(|N|^{c},\left|\left\langle N, \mathcal{R}_{N}^{\beta \eta}\right\rangle\right|^{c}\right)$, so $M \in \Psi^{c}\left(|M|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right)$.
- Let $M=\lambda x . N x$ such that $N x \in \Lambda \eta_{c}, N \neq c$ and $x \notin \mathrm{fv}(N) \cup\{c\}$. By lemma 5.2.8, $N \in \Lambda \eta_{c}$ and by lemma 4, $x \notin \operatorname{fv}\left(|N|^{c}\right) .|M|^{c}=\lambda x \cdot|N x|^{c}=\lambda x .|N|^{c} x$. Since $M,|M|^{c} \in \mathcal{R}^{\beta \eta}$, by lemma 5.3, $\mathcal{R}_{M}^{\beta \eta}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{N x}^{\beta \eta}\right\}$, so $\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}=$ $\{0\} \cup\left\{1 .\left.p|p \in|\left\langle N x, \mathcal{R}_{N x}^{\beta \eta}\right\rangle\right|^{c}\right\} \subseteq^{I H}\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{|N x| c}^{\beta \eta}\right\}=\mathcal{R}_{|M|^{c}}^{\beta \eta}$.
We proved $\left|\left\langle N x, \mathcal{R}_{N x}^{\beta \eta}\right\rangle\right|^{c}=\left\{\left.p|1 . p \in|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right\}$ and $0 \in\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}$. By definition, $\Psi^{c}\left(|M|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right)=\left\{c^{n}\left(\lambda x . N^{\prime}\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi_{0}^{c}\left(|N x|^{c},\left|\left\langle N x, \mathcal{R}_{N x}^{\beta \eta}\right\rangle\right|^{c}\right)\right\}$. By IH, $N x \in \Psi^{c}\left(|N x|^{\beta \eta},\left|\left\langle N x, \mathcal{R}_{N x}^{\beta \eta}\right\rangle\right|^{c}\right)$, so by lemma 8.2.1e,
$N x \in \Psi_{0}^{c}\left(|N x|^{\beta \eta},\left|\left\langle N x, \mathcal{R}_{N x}^{\beta \eta}\right\rangle\right|^{c}\right)$. Hence $M \in \Psi^{c}\left(|M|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right)$.
- Let $M=c N P$ where $N, P \in \Lambda \eta_{c}$, so $c N \in \Lambda \eta_{c} .|M|^{c}=|c N|^{c}|P|^{c}=|N|^{c}|P|^{c}$. Because $M, c N \notin \mathcal{R}^{\beta \eta}$, By lemma 5.3, $\mathcal{R}_{M}^{\beta \eta}=\left\{1.2 . p \mid p \in \mathcal{R}_{N}^{\beta \eta}\right\} \cup\left\{2 . p \mid \in \mathcal{R}_{P}^{\beta \eta}\right\}$. So $\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}=\left\{1 .\left.p|p \in|\left\langle N, \mathcal{R}_{N}^{\beta \eta}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle P, \mathcal{R}_{P}^{\beta \eta}\right\rangle\right|^{c}\right\} \subseteq^{I H}\{1 . p \mid p \in$ $\left.\mathcal{R}_{|N|^{c}}^{\beta \eta}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{|P|^{c}}^{\beta \eta}\right\} \subseteq^{5.3} \mathcal{R}_{|M|^{c}}^{\beta \eta}$.
We just proved that $0 \notin\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}$ and $\left|\left\langle N, \mathcal{R}_{N}^{\beta \eta}\right\rangle\right|^{c}=\left\{\left.p|1 . p \in|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle P, \mathcal{R}_{P}^{\beta \eta}\right\rangle\right|^{c}=\left\{\left.p|2 . p \in|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right\}$. By definition, $\Psi^{c}\left(|M|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right)=$ $\left\{c^{n}\left(c N^{\prime} P^{\prime}\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi^{c}\left(|N|^{c},\left|\left\langle N, \mathcal{R}_{N}^{\beta \eta}\right\rangle\right|^{c}\right) \wedge P^{\prime} \in \Psi^{c}\left(|P|^{c},\left|\left\langle P, \mathcal{R}_{P}^{\beta \eta}\right\rangle\right|^{c}\right)\right\}$. By $\mathrm{IH}, N \in \Psi^{c}\left(|N|^{\beta \eta},\left|\left\langle N, \mathcal{R}_{N}^{\beta \eta}\right\rangle\right|^{c}\right)$ and $P \in \Psi^{c}\left(|P|^{\beta \eta},\left|\left\langle P, \mathcal{R}_{P}^{\beta \eta}\right\rangle\right|^{c}\right)$, so $M \in \Psi^{c}\left(|M|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right)$.
- Let $M=N P$ where $N, P \in \Lambda \eta_{c}$ and $N$ is a $\lambda$-abstraction. So by definition $|N|^{c}$ is a $\lambda$-abstraction too and $|M|^{c}=|N|^{c}|P|^{c}$. Since $M \in \mathcal{R}^{\beta \eta}$, By lemma 5.3, $\mathcal{R}_{M}^{\beta \eta}=$ $\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{N}^{\beta \eta}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{P}^{\beta \eta}\right\}$. So $\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}=\{0\} \cup\{1 . p \mid p \in$ $\left.\left|\left\langle N, \mathcal{R}_{N}^{\beta \eta}\right\rangle\right|^{c}\right\} \cup\left\{2 .\left.p|p \in|\left\langle P, \mathcal{R}_{P}^{\beta \eta}\right\rangle\right|^{c}\right\} \subseteq^{I H}\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{|N|^{c}}^{\beta \eta}\right\} \cup\{2 . p \mid p \in$ $\left.\mathcal{R}_{|P| c}^{\beta \eta}\right\}={ }^{5.3} \mathcal{R}_{|M|^{c}}^{\beta \eta}$.
We just proved that $0 \in\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c},\left|\left\langle N, \mathcal{R}_{N}^{\beta \eta}\right\rangle\right|^{c}=\left\{\left.p|1 . p \in|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right\}$ and $\left|\left\langle P, \mathcal{R}_{P}^{\beta \eta}\right\rangle\right|^{c}=\left\{\left.p|2 . p \in|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right\}$. By definition, $\Psi^{c}\left(|M|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right)=$ $\left\{c^{n}\left(N^{\prime} P^{\prime}\right) \mid n \geq 0 \wedge N^{\prime} \in \Psi_{0}^{c}\left(|N|^{c},\left|\left\langle N, \mathcal{R}_{N}^{\beta \eta}\right\rangle\right|^{c}\right) \wedge P^{\prime} \in \Psi^{c}\left(|P|^{c},\left|\left\langle P, \mathcal{R}_{P}^{\beta \eta}\right\rangle\right|^{c}\right)\right\}$. By $\mathrm{IH}, N \in \Psi^{c}\left(|N|^{c},\left|\left\langle N, \mathcal{R}_{N}^{\beta \eta}\right\rangle\right|^{c}\right)$ and $P \in \Psi^{c}\left(|P|^{c},\left|\left\langle P, \mathcal{R}_{P}^{\beta \eta}\right\rangle\right|^{c}\right)$, so $N \in \Psi_{0}^{c}\left(|N|^{c},\left|\left\langle N, \mathcal{R}_{N}^{\beta \eta}\right\rangle\right|^{c}\right)$ and $M \in \Psi^{c}\left(|M|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right)$.
- Let $M=c N$ where $N \in \Lambda \eta_{c}$ then $|M|^{c}=|N|^{c}$. By lemma 5.3, $\mathcal{R}_{M}^{\beta \eta}=\{2 . p \mid p \in$ $\left.\mathcal{R}_{N}^{\beta \eta}\right\}$ so $\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}=\left|\left\langle N, \mathcal{R}_{N}^{\beta \eta}\right\rangle\right|^{c} \subseteq^{I H} \mathcal{R}_{|N|^{c}}^{\beta \eta}=\mathcal{R}_{\left.|M|\right|^{c}}^{\beta \eta}$.
By IH, $N \in \Psi^{c}\left(|N|^{c},\left|\left\langle N, \mathcal{R}_{N}^{\beta \eta}\right\rangle\right|^{c}\right)=\Psi^{c}\left(|M|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right)$, so by lemma 8.2.1f, $M \in \Psi^{c}\left(|M|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right)$.
2b. By lemma 4, $c \notin \operatorname{fv}\left(|M|^{c}\right)$. By lemma 8.2.2a, $\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c} \subseteq \mathcal{R}_{|M|^{c}}^{\beta \eta}$ and
$M \in \Psi^{c}\left(|M|^{c},\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}\right)$. To prove unicity, assume that $\left\langle N^{\prime}, \mathcal{F}^{\prime}\right\rangle$ is another such pair. So $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{N^{\prime}}^{\beta \eta}$ and $M \in \Psi^{c}\left(N^{\prime}, \mathcal{F}^{\prime}\right)$. By lemma 8.2.1g, $|M|^{c}=N^{\prime}$ and by lemma 8.2.1h, $\mathcal{F}^{\prime}=\left|\left\langle M, \mathcal{R}_{M}^{\beta \eta}\right\rangle\right|^{c}$.
$\operatorname{Proof}\left(\right.$ Lemma 8.2.3 ): Let $N_{1} \in \Psi^{c}(M, \mathcal{F})$. By lemma 8.2.1c, $N_{1} \in \Lambda \eta_{c}$. By lemma 8.2.1h and lemma 1, there exists a unique $p_{1} \in \mathcal{R}_{N_{1}}^{\beta \eta}$, such that $\left|\left\langle N_{1}, p_{1}\right\rangle\right|^{c}=p$. By lemma 2.2.8, there exists $N_{1}^{\prime}$ such that $N_{1}{\xrightarrow{p_{1}}}_{\beta \eta} N_{1}^{\prime}$. By lemma 2, $N_{1}^{\prime} \in \Lambda \eta_{c}$. By lemma 5.8.7a, $\left|N_{1}\right|^{c}{\xrightarrow{p_{1}^{\prime}}}_{\beta \eta}\left|N_{1}^{\prime}\right|^{c}$ such that $p_{1}^{\prime}=\left|\left\langle N_{1}, p_{1}\right\rangle\right|^{c}=p$. By lemma 8.2.1g, $M=\left|N_{1}\right|^{c}$. So by lemma 2.2.9, $M^{\prime}=\left|N_{1}^{\prime}\right|^{c}$. Let $\mathcal{F}^{\prime}=$ $\left|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$. By lemma 8.2.2b, $\left(M^{\prime}, \mathcal{F}^{\prime}\right)$ is the one and only pair such that $c \notin \operatorname{fv}\left(M^{\prime}\right), \mathcal{F}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta \eta}$ and $N_{1}^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$.

Let $N_{2} \in \Psi^{c}(M, \mathcal{F})$. By lemma 8.2.1c, $N_{2} \in \Lambda \eta_{c}$. By lemma 8.2.1h and lemma 1, there exists a unique $p_{2} \in \mathcal{R}_{N_{2}}^{\beta \eta}$, such that $\left|\left\langle N_{2}, p_{2}\right\rangle\right|^{c}=p$. By lemma 2.2.8, there exists $N_{2}^{\prime}$ such that $N_{2} \xrightarrow{p_{2}}{ }_{\beta \eta} N_{2}^{\prime}$. By lemma 2, $N_{2}^{\prime} \in \Lambda \eta_{c}$. By lemma 5.8.7a, $\left|N_{2}\right|^{c} \xrightarrow{p_{2}^{\prime}} \beta \eta\left|N_{2}^{\prime}\right|^{c}$ such that $p_{2}^{\prime}=\left|\left\langle N_{2}, p_{2}\right\rangle\right|^{c}=p$. By lemma 8.2.1g, $M=\left|N_{2}\right|^{c}$. So by lemma 2.2.9, $M^{\prime}=\left|N_{2}^{\prime}\right|^{c}$. Let $\mathcal{F}^{\prime \prime}=\left|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$. By lemma 8.2.2b, $\left(M^{\prime}, \mathcal{F}^{\prime \prime}\right)$ is the one and only pair such that $c \notin \mathrm{fv}\left(M^{\prime}\right), \mathcal{F}^{\prime \prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta \eta}$ and $N_{2}^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime \prime}\right)$.

Because $N_{1}, N_{2} \in \Psi^{c}(M, \mathcal{F})$, by lemma 8.2.1h, $\left|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{\beta \eta}\right\rangle\right|^{c}=\left|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{\beta \eta}\right\rangle\right|^{c}$ and by lemma 8.2.1g, $\left|N_{1}\right|^{c}=\left|N_{2}\right|^{c}$. Finally, by lemma 5.8.7c, $\mathcal{F}^{\prime}=\left|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}=\left|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}=\mathcal{F}^{\prime \prime}$.

Lemma F.1. If $p \in \mathcal{R}_{t}^{\beta \eta}$ then headlam $\left(t_{p}[\bar{x}:=c(c \bar{x})]\right)=$ headlam $\left(\left.t\right|_{p}\right)$.
Proof: We prove this lemma by induction on the structure of $t$.

- Let $t \in \mathcal{V}$ then by lemma 5.3, $\mathcal{R}_{t}^{\beta \eta}=\varnothing$.
- Let $t=\lambda_{n} y . t^{\prime}$ then by lemma 5.3:
- Either $p=0$ if $t^{\prime}=t^{\prime \prime} y$ and $y \notin \operatorname{fv}\left(t^{\prime \prime}\right)$. Then headlam $\left(\left.t\right|_{p}[\bar{x}:=c(c \bar{x})]\right)=\operatorname{headlam}(t[\bar{x}:=$ $c(c \bar{x})])=\operatorname{headlam}\left(\lambda_{n} y \cdot t^{\prime \prime}[\bar{x}:=c(c \bar{x})] y\right)=\langle 2, n\rangle=\operatorname{headlam}(t)$ such that $y \notin\{c, \bar{x}\}$.
- Or $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{t^{\prime}}^{\beta \eta}$. Then headlam $\left(\left.t\right|_{p}[\bar{x}:=c(c \bar{x})]\right)=\operatorname{headlam}\left(\left.t^{\prime}\right|_{p^{\prime}}[\bar{x}:=\right.$ $c(c \bar{x})])={ }^{I H}$ headlam $\left(\left.t^{\prime}\right|_{p^{\prime}}\right)=$ headlam $\left(\left.t\right|_{p}\right)$.
- Let $t=t_{1} t_{2}$ then by lemma 5.3:
- Either $p=0$ if $t_{1}=\lambda_{n} y \cdot t_{0}$. Then headlam $\left(\left.t\right|_{p}[\bar{x}:=c(c \bar{x})]\right)=$ headlam $(t[\bar{x}:=c(c \bar{x})])=$ $\operatorname{headlam}\left(\left(\lambda_{n} y \cdot t_{0}[\bar{x}:=c(c \bar{x})]\right) t_{2}[\bar{x}:=c(c \bar{x})]\right)=\langle 1, n\rangle=\operatorname{headlam}(t)$ such that $y \notin\{c, \bar{x}\}$.
- Or $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{t_{1}}^{\beta \eta}$. Then headlam $\left(\left.t\right|_{p}[\bar{x}:=c(c \bar{x})]\right)=$ headlam $\left(\left.t_{1}\right|_{p^{\prime}}[\bar{x}:=\right.$ $c(c \bar{x})])={ }^{I H}$ headlam $\left(\left.t_{1}\right|_{p^{\prime}}\right)=$ headlam $\left(\left.t\right|_{p}\right)$.
- Or $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{t_{2}}^{\beta \eta}$. Then headlam $\left(\left.t\right|_{p}[\bar{x}:=c(c \bar{x})]\right)=\operatorname{headlam}\left(\left.t_{2}\right|_{p^{\prime}}[\bar{x}:=\right.$ $c(c \bar{x})])={ }^{I H}$ headlam $\left(\left.t_{2}\right|_{p^{\prime}}\right)=$ headlam $\left(\left.t\right|_{p}\right)$.

Lemma F.2. Let $t \in \bar{\Lambda}$ and $\mathcal{F} \subseteq \mathcal{R}_{t}^{\beta \eta}$.

- If $t=x$ then headlamred $(t, \mathcal{F})=\operatorname{hlr}(t)=\varnothing$.
- If $t=\lambda_{n} x . t_{1}$ then if $t \in \mathcal{R}^{\beta \eta}$ then $\operatorname{hlr}(t)=\operatorname{hlr}\left(t_{1}\right) \cup\{\langle 2, n\rangle\}$ else $\operatorname{hlr}(t)=\operatorname{hlr}\left(t_{1}\right)$.
- If $t=\lambda_{n} x . t_{1}$ and $\mathcal{F}_{1}=\{p \mid 1 . p \in \mathcal{F}\}$ then if $0 \in \mathcal{F}$ then headlamred $(t, \mathcal{F})=$ headlamred $\left(t_{1}, \mathcal{F}_{1}\right) \cup\{\langle 2, n\rangle\}$ else headlamred $(t, \mathcal{F})=$ headlamred $\left(t_{1}, \mathcal{F}_{1}\right)$.
- If $t=t_{1} t_{2}$ then if $t \in \mathcal{R}^{\beta \eta}$ then $\operatorname{hlr}(t)=\operatorname{hlr}\left(t_{1}\right) \cup \operatorname{hlr}\left(t_{2}\right) \cup\{$ headlam $(t)\}$ else $\operatorname{hlr}(t)=$ $\mathrm{hlr}\left(t_{1}\right) \cup \mathrm{hlr}\left(t_{2}\right)$.
- If $t=t_{1} t_{2}, \mathcal{F}_{1}=\{p \mid 1 . p \in \mathcal{F}\}$ and $\mathcal{F}_{2}=\{p \mid 2 . p \in \mathcal{F}\}$ then if $0 \in \mathcal{F}$ then headlamred $(t, \mathcal{F})=$ headlamred $\left(t_{1}, \mathcal{F}_{1}\right) \cup$ headlamred $\left(t_{2}, \mathcal{F}_{2}\right) \cup\{$ headlam $(t)\}$ else headlamred $(t, \mathcal{F})=\operatorname{headlamred}\left(t_{1}, \mathcal{F}_{1}\right) \cup$ headlamred $\left(t_{2}, \mathcal{F}_{2}\right)$.
- If $t=\lambda_{n} \bar{x} \cdot t_{1}[\bar{x}:=c(c \bar{x})]$ then $\operatorname{hlr}(t)=\operatorname{hlr}\left(t_{1}\right)$.
- If $t=c^{n}\left(t_{1}\right)$, then $\operatorname{hlr}(t)=\operatorname{hlr}\left(t_{1}\right)$.

Proof: By definition $\operatorname{hlr}(t)=\left\{\langle i, n\rangle \mid \exists p \in \mathcal{R}_{t}^{\beta \eta}\right.$. headlam $\left.\left(\left.t\right|_{p}\right)=\langle i, n\rangle\right\}$ and headlamred $(t, \mathcal{F})=$ $\left\{\langle i, n\rangle \mid \exists p \in \mathcal{F}\right.$. headlam $\left.\left(\left.t\right|_{p}\right)=\langle i, n\rangle\right\}$. We prove the frist three items of this lemma by induction on the size of $t$ and then by case on the structure of $t$.

- Let $t=x$. By lemma 5.3, $\mathcal{F}=\mathcal{R}_{x}^{\beta \eta}=\varnothing$, then headlamred $(x, \mathcal{F})=\operatorname{hlr}(x)=\varnothing$.
- Let $t=\lambda_{n} x \cdot t_{1}$.
- Let $t \in \mathcal{R}^{\beta \eta}$ then $t_{1}=t_{0} x$ such that $x \notin \mathrm{fv}\left(t_{0}\right)$.
* Let $\langle j, m\rangle \in \operatorname{hlr}(t)$ then there exists $p \in \mathcal{R}_{t}^{\beta \eta}$ such that headlam $\left(\left.t\right|_{p}\right)=\langle j, m\rangle$. By lemma 5.3:
- Either $p=0$, so $\langle j, m\rangle=\operatorname{headlam}\left(\left.t\right|_{0}\right)=\operatorname{headlam}(t)=\langle 2, n\rangle$.
- Or $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{t_{1}}^{\beta \eta}$. Then, $\langle j, m\rangle=\operatorname{headlam}\left(\left.t\right|_{p}\right)=\operatorname{headlam}\left(\left.t_{1}\right|_{p^{\prime}}\right)$. So $\langle j, m\rangle \in \operatorname{hlr}\left(t_{1}\right)$.
* Let $\langle j, m\rangle \in \operatorname{hlr}\left(t_{1}\right) \cup\{\langle 2, n\rangle\}$.
- Either $\langle j, m\rangle \in \operatorname{hlr}\left(t_{1}\right)$. Then there exists $p \in \mathcal{R}_{t_{1}}^{\beta \eta}$ such that headlam $\left(\left.t_{1}\right|_{p}\right)=$ $\langle j, m\rangle$. By lemma 5.3, 1.p $\in \mathcal{R}_{t}^{\beta \eta}$ and $\langle j, m\rangle=\operatorname{headlam}\left(\left.t_{1}\right|_{p}\right)=\operatorname{headlam}\left(\left.t\right|_{1 . p}\right)$. So $\langle j, m\rangle \in \operatorname{hlr}(t)$.
- Or $\langle j, m\rangle=\langle 2, n\rangle$. By lemma 5.3, $0 \in \mathcal{R}_{t}^{\beta \eta}$ and headlam $\left(\left.t\right|_{0}\right)=$ headlam $(t)=$ $\langle 2, n\rangle$. So $\langle j, m\rangle \in \operatorname{hlr}(t)$.
- Let $t \notin \mathcal{R}^{\beta \eta}$.
* Let $\langle j, m\rangle \in \operatorname{hlr}(t)$ then there exists $p \in \mathcal{R}_{t}^{\beta \eta}$ such that headlam $\left(\left.t\right|_{p}\right)=\langle j, m\rangle$. By lemma 5.3, $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{t_{1}}^{\beta \eta}$. Then, $\langle j, m\rangle=\operatorname{headlam}\left(\left.t\right|_{p}\right)=$ headlam $\left(\left.t_{1}\right|_{p^{\prime}}\right)$. So $\langle j, m\rangle \in \operatorname{hlr}\left(t_{1}\right)$.
* Let $\langle j, m\rangle \in \operatorname{hlr}\left(t_{1}\right)$ then there exists $p \in \mathcal{R}_{t_{1}}^{\beta \eta}$ such that headlam $\left(\left.t_{1}\right|_{p}\right)=\langle j, m\rangle$. By lemma 5.3, 1.p $\in \mathcal{R}_{t}^{\beta \eta}$ and $\langle j, m\rangle=$ headlam $\left(\left.t_{1}\right|_{p}\right)=\operatorname{headlam}\left(\left.t\right|_{1 . p}\right)$. So $\langle j, m\rangle \in$ $h \operatorname{lr}(t)$.
- Let $t=\lambda_{n} x . t_{1}$ and $\mathcal{F}_{1}=\{p \mid 1 . p \in \mathcal{F}\}$.
- Let $0 \in \mathcal{F}$ then $t \in \mathcal{R}^{\beta \eta}$.
* Let $\langle j, m\rangle \in \operatorname{headlamred}(t, \mathcal{F})$ then there exists $p \in \mathcal{F}$ such that headlam $\left(\left.t\right|_{p}\right)=$ $\langle j, m\rangle$. By lemma 5.3:
- Either $p=0$, so $\langle j, m\rangle=$ headlam $\left(\left.t\right|_{0}\right)=\operatorname{headlam}(t)=\langle 2, n\rangle$.
- Or $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{F}_{1}$. Then, $\langle j, m\rangle=\operatorname{headlam}\left(\left.t\right|_{p}\right)=\operatorname{headlam}\left(\left.t_{1}\right|_{p^{\prime}}\right)$. So $\langle j, m\rangle \in$ headlamred $\left(t_{1}, \mathcal{F}_{1}\right)$.
* Let $\langle j, m\rangle \in \operatorname{headlamred}\left(t_{1}, \mathcal{F}_{1}\right) \cup\{\langle 2, n\rangle\}$.
- Either $\langle j, m\rangle \in \operatorname{headlamred}\left(t_{1}, \mathcal{F}_{1}\right)$. Then there exists $p \in \mathcal{F}_{1}$ such that headlam $\left(\left.t_{1}\right|_{p}\right)=\langle j, m\rangle$. So, 1. $p \in \mathcal{F}$ and $\langle j, m\rangle=\operatorname{headlam}\left(\left.t_{1}\right|_{p}\right)=\operatorname{headlam}\left(\left.t\right|_{1 . p}\right)$. Hence, $\langle j, m\rangle \in \operatorname{headlamred}(t, \mathcal{F})$.
- $\operatorname{Or}\langle j, m\rangle=\langle 2, n\rangle$. Because $0 \in \mathcal{F}$ and headlam $\left(\left.t\right|_{0}\right)=\operatorname{headlam}(t)=\langle 2, n\rangle$ then $\langle j, m\rangle \in$ headlamred $(t, \mathcal{F})$.
- Let $0 \notin \mathcal{F}$.
* Let $\langle j, m\rangle \in \operatorname{headlamred}(t, \mathcal{F})$ then there exists $p \in \mathcal{F}$ such that headlam $\left(\left.t\right|_{p}\right)=$ $\langle j, m\rangle$. By lemma 5.3, $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{F}_{1}$. Then, $\langle j, m\rangle=$ headlam $\left(\left.t\right|_{p}\right)=$ headlam $\left(\left.t_{1}\right|_{p^{\prime}}\right)$. So $\langle j, m\rangle \in \operatorname{headlamred}\left(t_{1}, \mathcal{F}_{1}\right)$.
* Let $\langle j, m\rangle \in \operatorname{headlamred}\left(t_{1}, \mathcal{F}_{1}\right)$ then there exists $p \in \mathcal{F}_{1}$ such that headlam $\left(\left.t_{1}\right|_{p}\right)=$ $\langle j, m\rangle$. By lemma 5.3, 1. $p \in \mathcal{F}$ and $\langle j, m\rangle=\operatorname{headlam}\left(\left.t_{1}\right|_{p}\right)=\operatorname{headlam}\left(\left.t\right|_{1 . p}\right)$. So $\langle j, m\rangle \in \operatorname{headlamred}(t, \mathcal{F})$.
- Let $t=t_{1} t_{2}$.
- Let $t \in \mathcal{R}^{\beta \eta}$ then $t_{1}=\lambda_{n} x . t_{0}$. So $\langle 1, n\rangle=\operatorname{headlam}(t)$.
* Let $\langle j, m\rangle \in \operatorname{hlr}(t)$ then there exists $p \in \mathcal{R}_{t}^{\beta \eta}$ such that headlam $\left(\left.t\right|_{p}\right)=m$. By lemma 5.3:
- Either $p=0$, so $\langle j, m\rangle=$ headlam $\left(\left.t\right|_{0}\right)=\operatorname{headlam}(t)=\langle 1, n\rangle$.
- Or $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{t_{1}}^{\beta \eta}$. Then, $\langle j, m\rangle=$ headlam $\left(\left.t\right|_{p}\right)=\operatorname{headlam}\left(\left.t_{1}\right|_{p^{\prime}}\right)$. So $\langle j, m\rangle \in \operatorname{hlr}\left(t_{1}\right)$.
- Or $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{t_{2}}^{\beta \eta}$.

Moreover, $\langle j, m\rangle=\operatorname{headlam}\left(\left.t\right|_{p}\right)=\operatorname{headlam}\left(\left.t_{2}\right|_{p^{\prime}}\right)$. So $\langle j, m\rangle \in \operatorname{hlr}\left(t_{2}\right)$.

* Let $\langle j, m\rangle \in \operatorname{hlr}\left(t_{1}\right) \cup \operatorname{hlr}\left(t_{2}\right) \cup\{\langle 1, n\rangle\}$.
- Either $\langle j, m\rangle \in \operatorname{hlr}\left(t_{1}\right)$. Then there exists $p \in \mathcal{R}_{t_{1}}^{\beta \eta}$ such that headlam $\left(\left.t_{1}\right|_{p}\right)=$ $\langle j, m\rangle$. By lemma 5.3, 1.p $\in \mathcal{R}_{t}^{\beta \eta}$ and $\langle j, m\rangle=\operatorname{headlam}\left(\left.t_{1}\right|_{p}\right)=\operatorname{headlam}\left(\left.t\right|_{1 . p}\right)$. So $\langle j, m\rangle \in \operatorname{hlr}(t)$.
- Or $\langle j, m\rangle \in \operatorname{hlr}\left(t_{2}\right)$. Then there exists $p \in \mathcal{R}_{t_{2}}^{\beta \eta}$ such that headlam $\left(\left.t_{2}\right|_{p}\right)=\langle j, m\rangle$. By lemma 5.3, 2.p $\in \mathcal{R}_{t}^{\beta \eta}$ and $\langle j, m\rangle=$ headlam $\left(\left.t_{2}\right|_{p}\right)=\operatorname{headlam}\left(\left.t\right|_{2 . p}\right)$. So $\langle j, m\rangle \in \operatorname{hlr}(t)$.
- Or $\langle j, m\rangle=\langle 1, n\rangle$. By lemma 5.3, $0 \in \mathcal{R}_{t}^{\beta \eta}$ and headlam $\left(\left.t\right|_{0}\right)=$ headlam $(t)=$ $\langle 1, n\rangle$. So $\langle j, m\rangle \in \operatorname{hlr}(t)$.
- Let $t \notin \mathcal{R}^{\beta \eta}$.
* Let $\langle j, m\rangle \in \operatorname{hlr}(t)$ then there exists $p \in \mathcal{R}_{t}^{\beta \eta}$ such that headlam $\left(\left.t\right|_{p}\right)=\langle j, m\rangle$. By lemma 5.3:
- Either $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{t_{1}}^{\beta \eta}$. Moreover, $\langle j, m\rangle=\operatorname{headlam}\left(\left.t\right|_{p}\right)=$ $\operatorname{headlam}\left(\left.t_{1}\right|_{p^{\prime}}\right)$. So $\langle j, m\rangle \in \operatorname{hlr}\left(t_{1}\right)$.
- Or $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{t_{2}}^{\beta \eta}$.

Moreover, $\langle j, m\rangle=$ headlam $\left(\left.t\right|_{p}\right)=$ headlam $\left(\left.t_{2}\right|_{p^{\prime}}\right)$. So $\langle j, m\rangle \in \operatorname{hlr}\left(t_{2}\right)$.

* Let $\langle j, m\rangle \in \operatorname{hlr}\left(t_{1}\right) \cup \operatorname{hlr}\left(t_{2}\right)$.
- Either $\langle j, m\rangle \in \operatorname{hlr}\left(t_{1}\right)$. Then there exists $p \in \mathcal{R}_{t_{1}}^{\beta \eta}$ such that headlam $\left(\left.t_{1}\right|_{p}\right)=$ $\langle j, m\rangle$. By lemma 5.3, 1.p $\in \mathcal{R}_{t}^{\beta \eta}$ and $\langle j, m\rangle=$ headlam $\left(\left.t_{1}\right|_{p}\right)=$ headlam $\left(\left.t\right|_{1 . p}\right)$. So $\langle j, m\rangle \in \operatorname{hlr}(t)$.
- Or $\langle j, m\rangle \in \operatorname{hlr}\left(t_{2}\right)$. Then there exists $p \in \mathcal{R}_{t_{2}}^{\beta \eta}$ such that headlam $\left(\left.t_{2}\right|_{p}\right)=\langle j, m\rangle$. By lemma 5.3, 2.p $\in \mathcal{R}_{t}^{\beta \eta}$ and $\langle j, m\rangle=$ headlam $\left(\left.t_{2}\right|_{p}\right)=\operatorname{headlam}\left(\left.t\right|_{2 . p}\right)$. So $\langle j, m\rangle \in \operatorname{hlr}(t)$.
- Let $t=t_{1} t_{2}, \mathcal{F}_{1}=\{p \mid 1 . p \in \mathcal{F}\}$ and $\mathcal{F}_{2}=\{p \mid 2 . p \in \mathcal{F}\}$.
- Let $0 \in \mathcal{F}$ then $t \in \mathcal{R}^{\beta \eta}$.
* Let $\langle j, m\rangle \in$ headlamred $(t, \mathcal{F})$ then there exists $p \in \mathcal{F}$ such that headlam $\left(\left.t\right|_{p}\right)=m$. By lemma 5.3:
- Either $p=0$, so $\langle j, m\rangle=$ headlam $\left(\left.t\right|_{0}\right)=$ headlam $(t)$.
- Or $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{F}_{1}$. Then, $\langle j, m\rangle=$ headlam $\left(\left.t\right|_{p}\right)=\operatorname{headlam}\left(\left.t_{1}\right|_{p^{\prime}}\right)$. So $\langle j, m\rangle \in$ headlamred $\left(t_{1}, \mathcal{F}_{1}\right)$.
- Or $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{F}_{2}$. Then, $\langle j, m\rangle=\operatorname{headlam}\left(\left.t\right|_{p}\right)=\operatorname{headlam}\left(\left.t_{2}\right|_{p^{\prime}}\right)$. So $\langle j, m\rangle \in \operatorname{headlamred}\left(t_{2}, \mathcal{F}_{2}\right)$.
* Let $\langle j, m\rangle \in$ headlamred $\left(t_{1}, \mathcal{F}_{1}\right) \cup$ headlamred $\left(t_{2}, \mathcal{F}_{2}\right) \cup\{$ headlam $(t)\}$.
- Either $\langle j, m\rangle \in$ headlamred $\left(t_{1}, \mathcal{F}_{1}\right)$. Then there exists $p \in \mathcal{F}_{1}$ such that headlam $\left(\left.t_{1}\right|_{p}\right)=\langle j, m\rangle$. So, 1. $p \in \mathcal{F}$ and $\langle j, m\rangle=\operatorname{headlam}\left(\left.t_{1}\right|_{p}\right)=\operatorname{headlam}\left(\left.t\right|_{1 . p}\right)$. Hence, $\langle j, m\rangle \in \operatorname{headlamred}(t, \mathcal{F})$.
- Or $\langle j, m\rangle \in$ headlamred $\left(t_{2}, \mathcal{F}_{2}\right)$. Then there exists $p \in \mathcal{F}_{2}$ such that headlam $\left(\left.t_{2}\right|_{p}\right)=\langle j, m\rangle$. So, $2 . p \in \mathcal{F}$ and
$\langle j, m\rangle=\operatorname{headlam}\left(\left.t_{2}\right|_{p}\right)=\operatorname{headlam}\left(\left.t\right|_{2 . p}\right)$. Hence, $\langle j, m\rangle \in \operatorname{headlamred}(t, \mathcal{F})$.
- Or $\langle j, m\rangle=$ headlam $(t)$. Because $0 \in \mathcal{F}$ and headlam $\left(\left.t\right|_{0}\right)=\operatorname{headlam}(t)$, then $\langle j, m\rangle \in \operatorname{headlamred}(t, \mathcal{F})$.
- Let $0 \notin \mathcal{F}$.
* Let $\langle j, m\rangle \in \operatorname{headlamred}(t, \mathcal{F})$ then there exists $p \in \mathcal{F}$ such that headlam $\left(\left.t\right|_{p}\right)=$ $\langle j, m\rangle$. By lemma 5.3:
- Either $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{F}_{1}$. Moreover,
$\langle j, m\rangle=\operatorname{headlam}\left(\left.t\right|_{p}\right)=$ headlam $\left(\left.t_{1}\right|_{p^{\prime}}\right)$. So $\langle j, m\rangle \in \operatorname{headlamred}\left(t_{1}, \mathcal{F}_{1}\right)$.
- Or $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{F}_{2}$. Moreover,
$\langle j, m\rangle=$ headlam $\left(\left.t\right|_{p}\right)=$ headlam $\left(\left.t_{2}\right|_{p^{\prime}}\right)$. So $\langle j, m\rangle \in \operatorname{headlamred}\left(t_{2}, \mathcal{F}_{2}\right)$.
* Let $\langle j, m\rangle \in$ headlamred $\left(t_{1}, \mathcal{F}_{1}\right) \cup$ headlamred $\left(t_{2}, \mathcal{F}_{2}\right)$.
- Either $\langle j, m\rangle \in \operatorname{headlamred}\left(t_{1}, \mathcal{F}_{1}\right)$. Then there exists $p \in \mathcal{F}_{1}$ such that headlam $\left(\left.t_{1}\right|_{p}\right)=\langle j, m\rangle$. So, 1. $p \in \mathcal{F}$ and $\langle j, m\rangle=\operatorname{headlam}\left(\left.t_{1}\right|_{p}\right)=\operatorname{headlam}\left(\left.t\right|_{1 . p}\right)$. Hence, $\langle j, m\rangle \in \operatorname{headlamred}(t, \mathcal{F})$.
- Or $\langle j, m\rangle \in$ headlamred $\left(t_{2}, \mathcal{F}_{2}\right)$. Then there exists $p \in \mathcal{F}_{2}$ such that headlam $\left(\left.t_{2}\right|_{p}\right)=\langle j, m\rangle$. So, 2. $p \in \mathcal{F}$ and $\langle j, m\rangle=\operatorname{headlam}\left(\left.t_{2}\right|_{p}\right)=\operatorname{headlam}\left(\left.t\right|_{2 . p}\right)$. Hence, $\langle j, m\rangle \in \operatorname{headlamred}(t, \mathcal{F})$.

Let $t=\lambda_{n} \bar{x} \cdot t_{1}[\bar{x}:=c(c \bar{x})]$.

- Let $\langle j, m\rangle \in \operatorname{hlr}(t)$ then there exists $p \in \mathcal{R}_{t}^{\beta \eta}$ such that headlam $\left(\left.t\right|_{p}\right)=\langle j, m\rangle$. By lemma 5.4.3 and lemma 5.4.4, $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{t_{1}}^{\beta \eta}$. Moreover,
$\langle j, m\rangle=\operatorname{headlam}\left(\left.t\right|_{p}\right)=\operatorname{headlam}\left(\left.t_{1}[\bar{x}:=c(c \bar{x})]\right|_{p^{\prime}}\right)={ }^{5.4 .2}$ headlam $\left(\left.t_{1}\right|_{p^{\prime}}[\bar{x}:=c(c \bar{x})]\right)={ }^{F .1}$ headlam $\left(\left.t_{1}\right|_{p^{\prime}}\right)$. So $\langle j, m\rangle \in \operatorname{hlr}\left(t_{1}\right)$.
- Let $\langle j, m\rangle \in \operatorname{hlr}\left(t_{1}\right)$ then there exists $p \in \mathcal{R}_{t_{1}}^{\beta \eta}$ such that headlam $\left(\left.t_{1}\right|_{p}\right)=\langle j, m\rangle$. By lemma 5.4.3 and lemma 5.4.4, 1.p $\in \mathcal{R}_{t}^{\beta \eta}$. Moreover, $\langle j, m\rangle=\operatorname{headlam}\left(\left.t_{1}\right|_{p}\right)={ }^{F .1}$ headlam $\left(\left.t_{1}\right|_{p}[\bar{x}:=\right.$ $c(c \bar{x})])={ }^{54.2}$ headlam $\left(\left.t_{1}[\bar{x}:=c(c \bar{x})]\right|_{p}\right)=$ headlam $\left(\left.t\right|_{1 . p}\right)$. So $\langle j, m\rangle \in \operatorname{hlr}(t)$.
Let $t=c^{n}\left(t_{1}\right)$. We prove that $\operatorname{hlr}(t)=\operatorname{hlr}\left(t_{1}\right)$ by induction on n .
- Let $n=0$ then it is done.
- Let $n=m+1$ such that $m \geq 0$ then $\operatorname{hlr}(t)={ }^{F \cdot 2} \operatorname{hlr}\left(c^{m}\left(t_{1}\right)\right)={ }^{I H} \operatorname{hlr}\left(t_{1}\right)$.
$\operatorname{Proof}(L e m m a 8.4): \quad$ We prove this lemma by induction on the structure of $t$.
- Let $t=x \neq c$ then by lemma 5.3, $\mathcal{F}=\varnothing$ and $u=c^{n}(x)$ such that $n \geq 0$. Then, $\operatorname{hlr}(u)={ }^{F .2}$ $\varnothing=\operatorname{headlamred}(t, \mathcal{F})$.
- Let $t=\lambda_{n} x . t_{1}$ such that $x \neq c$ and $\mathcal{F}_{1}=p \mid 1 . p \in \mathcal{F}$.
- If $0 \in \mathcal{F}$ then $t_{1}=t_{1}^{\prime} x$ such that $x \notin \operatorname{fv}\left(t_{1}^{\prime}\right)$, and $u=c^{n}\left(\lambda_{n} x . u_{1}\right)$ such that $n \geq 0$ and $u_{1} \in \Psi_{0}^{c}\left(t_{1}, \mathcal{F}_{1}\right)$. By IH and lemma 8.2.1a, $\operatorname{hlr}\left(u_{1}\right)=\operatorname{headlamred}\left(t_{1}, \mathcal{F}_{1}\right)$. Then, $\operatorname{hlr}(u)={ }^{8.2 .1 d, F .2} \operatorname{hlr}\left(u_{1}\right) \cup\{\langle 2, n\rangle\}=\operatorname{headlamred}\left(t_{1}, \mathcal{F}_{1}\right) \cup\{\langle 2, n\rangle\}=F .2 \operatorname{headlamred}(t, \mathcal{F})$.
- Else, $u=c^{n}\left(\lambda_{n} x . u_{1}[x:=c(c x)]\right)$ such that $n \geq 0$ and $u_{1} \in \Psi^{c}\left(t_{1}, \mathcal{F}_{1}\right)$. By IH, $\operatorname{hlr}\left(u_{1}\right)=$ headlamred $\left(t_{1}, \mathcal{F}_{1}\right)$.
Then, $\operatorname{hlr}(u)={ }^{F .2} \operatorname{hlr}\left(u_{1}\right)=\operatorname{headlamred}\left(t_{1}, \mathcal{F}_{1}\right)={ }^{F .2} \operatorname{headlamred}(t, \mathcal{F})$.
- Let $t=t_{1} t_{2}, \mathcal{F}_{1}=\{p \mid 1 . p \in \mathcal{F}\}$ and $\mathcal{F}_{2}=\{p \mid 2 . p \in \mathcal{F}\}$.
- If $0 \in \mathcal{F}$ then $t_{1}=\lambda_{n} y \cdot t_{1}^{\prime}$, and $u=c^{n}\left(u_{1} u_{2}\right)$ such that $n \geq 0, u_{1} \in \Psi_{0}^{c}\left(t_{1}, \mathcal{F}_{1}\right)$ and $u_{2} \in \Psi^{c}\left(t_{2}, \mathcal{F}_{2}\right)$. By definition, $u_{1}=\lambda_{n} y \cdot u_{1}^{\prime}$. By IH and lemma 8.2.1a, $\operatorname{hlr}\left(u_{1}\right)=$ headlamred $\left(t_{1}, \mathcal{F}_{1}\right)$ and $\operatorname{hlr}\left(u_{2}\right)=\operatorname{headlamred}\left(t_{2}, \mathcal{F}_{2}\right)$.
Then, $\operatorname{hlr}(u)={ }^{F .2} \operatorname{hlr}\left(u_{1}\right) \cup h \operatorname{lr}\left(u_{2}\right) \cup\{\langle 1, n\rangle\}=\operatorname{headlamred}\left(t_{1}, \mathcal{F}_{1}\right) \cup$ headlamred $\left(t_{2}, \mathcal{F}_{2}\right) \cup$ $\{\langle 1, n\rangle\}=F .2$ headlamred $(t, \mathcal{F})$.
- Else, $u=c^{n}\left(c u_{1} u_{2}\right)$ such that $n \geq 0, u_{1} \in \Psi^{c}\left(t_{1}, \mathcal{F}_{1}\right)$ and $u_{2} \in \Psi^{c}\left(t_{2}, \mathcal{F}_{2}\right)$. By IH, $\operatorname{hlr}\left(u_{1}\right)=\operatorname{headlamred}\left(t_{1}, \mathcal{F}_{1}\right)$ and $\operatorname{hlr}\left(u_{2}\right)=\operatorname{headlamred}\left(t_{2}, \mathcal{F}_{2}\right)$. Then, $\operatorname{hlr}(u)={ }^{F .2}$ $\operatorname{hlr}\left(u_{1}\right) \cup \operatorname{hlr}\left(u_{2}\right)=\operatorname{headlamred}\left(t_{1}, \mathcal{F}_{1}\right) \cup \operatorname{headlamred}\left(t_{2}, \mathcal{F}_{2}\right)={ }^{F .2} \operatorname{headlamred}(t, \mathcal{F})$.

Lemma F.3. $\operatorname{hlr}\left(u_{1}\left[\bar{x}:=c\left(c u_{2}\right)\right]\right) \subseteq \operatorname{hlr}\left(\left(\lambda_{n} \bar{x} \cdot u_{1}[\bar{x}:=c(c \bar{x})]\right) u_{2}\right)$.

Proof: We prove the lemma by induction on the size of $u_{1}$ and then by case on the structure of $u_{1}$.

- Let $u_{1} \in \mathcal{V}$. Either $u_{1}=\bar{x}$ then $\operatorname{hlr}\left(u_{1}\left[\bar{x}:=c\left(c u_{2}\right)\right]\right)=\operatorname{hlr}\left(c\left(c u_{2}\right)\right)={ }^{F .2} \operatorname{hlr}\left(u_{2}\right) \subseteq{ }^{F .4}$ $\operatorname{hlr}\left(\left(\lambda_{n} \bar{x} \cdot u_{1}[\bar{x}:=c(c \bar{x})]\right) u_{2}\right)$. Or $u_{1}=y \neq \bar{x}$ then $\operatorname{hlr}\left(u_{1}\left[\bar{x}:=c\left(c u_{2}\right)\right]\right)=\operatorname{hlr}\left(u_{1}\right) \subseteq \subseteq^{F \cdot 4, F .2}$ $\operatorname{h} \operatorname{lr}\left(\left(\lambda_{n} \bar{x} \cdot u_{1}[\bar{x}:=c(c \bar{x})]\right) u_{2}\right)$.
- Let $u_{1}=\lambda_{m} \bar{y} \cdot u_{1}^{\prime}[\bar{y}:=c(c \bar{y})]$. Then $\operatorname{hlr}\left(u_{1}\left[\bar{x}:=c\left(c u_{2}\right)\right]\right)=\operatorname{hlr}\left(\left(\lambda_{m} \bar{y} \cdot u_{1}^{\prime}[\bar{y}:=c(c \bar{y})]\right)[\bar{x}:=\right.$ $\left.\left.c\left(c u_{2}\right)\right]\right)=\operatorname{hlr}\left(\lambda_{m} \bar{y} \cdot u_{1}^{\prime}\left[\bar{x}:=c\left(c u_{2}\right)\right][\bar{y}:=c(c \bar{y})]\right)={ }^{F .2} \operatorname{hlr}\left(u_{1}^{\prime}\left[\bar{x}:=c\left(c u_{2}\right)\right]\right) \subseteq^{I H} \operatorname{hlr}\left(\left(\lambda_{n} \bar{x} \cdot u_{1}^{\prime}[\bar{x}:=\right.\right.$ $\left.c(c \bar{x})]) u_{2}\right)={ }^{F .2} \operatorname{hlr}\left(u_{1}^{\prime}\right) \cup \operatorname{lr}\left(u_{2}\right) \cup\{\langle 1, n\rangle\}={ }^{F .2} \operatorname{hlr}\left(\lambda_{m} \bar{y} \cdot u_{1}^{\prime}[\bar{y}:=c(c \bar{y})]\right) \cup h \operatorname{lr}\left(u_{2}\right) \cup\{\langle 1, n\rangle\}={ }^{F .2}$ $\operatorname{hlr}\left(\left(\lambda_{n} \bar{x} . u_{1}[\bar{x}:=c(c \bar{x})]\right) u_{2}\right)$ such that $\bar{y} \notin \mathrm{fv}\left(u_{2}\right) \cup\{\bar{x}\}$.
- Let $u_{1}=\lambda_{m} \bar{y} \cdot w \bar{y}$ such that $\bar{y} \notin \mathrm{fv}(w)$. Then, $\operatorname{hlr}\left(u_{1}\left[\bar{x}:=c\left(c u_{2}\right)\right]\right)=\operatorname{hlr}\left(\lambda_{m} \bar{y} \cdot(w \bar{y})[\bar{x}:=\right.$ $\left.\left.c\left(c u_{2}\right)\right]\right)={ }^{F .2} \operatorname{hlr}\left((w \bar{y})\left[\bar{x}:=c\left(c u_{2}\right)\right]\right) \cup\{\langle 2, m\rangle\} \subseteq^{I H} \operatorname{hlr}\left(\left(\lambda_{n} \bar{x} .(w \bar{y})[\bar{x}:=c(c \bar{x})]\right) u_{2}\right) \cup$ $\{\langle 2, m\rangle\}={ }^{F .2} \operatorname{hlr}(w \bar{y}) \cup \operatorname{hlr}\left(u_{2}\right) \cup\{\langle 1, n\rangle,\langle 2, m\rangle\}=^{F .2} \operatorname{hlr}\left(\left(\lambda_{n} \bar{x} \cdot\left(\lambda_{m} \bar{y} \cdot w \bar{y}\right)[\bar{x}:=c(c \bar{x})]\right) u_{2}\right)$ such that $\bar{y} \notin \mathrm{fv}\left(u_{2}\right) \cup\{\bar{x}\}$.
- Let $u_{1}=c u_{1}^{\prime} u_{1}^{\prime \prime}$. Then, $\operatorname{hlr}\left(u_{1}\left[\bar{x}:=c\left(c u_{2}\right)\right]\right)=\operatorname{hlr}\left(c u_{1}^{\prime}\left[\bar{x}:=c\left(c u_{2}\right)\right] u_{1}^{\prime \prime}\left[\bar{x}:=c\left(c u_{2}\right)\right]\right)={ }^{F .2}$ $\operatorname{hlr}\left(u_{1}^{\prime}\left[\bar{x}:=c\left(c u_{2}\right)\right]\right) \cup \operatorname{hlr}\left(u_{1}^{\prime \prime}\left[\bar{x}:=c\left(c u_{2}\right)\right]\right) \subseteq^{I H} \operatorname{hlr}\left(\left(\lambda_{n} \bar{x} \cdot u_{1}^{\prime}[\bar{x}:=c(c \bar{x})]\right) u_{2}\right) \cup \operatorname{hr}\left(\left(\lambda_{n} \bar{x} \cdot u_{1}^{\prime \prime}[\bar{x}:=\right.\right.$ $\left.c(c \bar{x})]) u_{2}\right)={ }^{F .2} \operatorname{hlr}\left(u_{1}^{\prime}\right) \cup \operatorname{hlr}\left(u_{1}^{\prime \prime}\right) \cup \operatorname{hlr}\left(u_{2}\right) \cup\{\langle 1, n\rangle\}={ }^{F .2} \operatorname{hlr}\left(\left(\lambda_{n} \bar{x} .\left(c u_{1}^{\prime} u_{1}^{\prime \prime}\right)[\bar{x}:=c(c \bar{x})]\right) u_{2}\right)$.
- Let $u_{1}=v u_{1}^{\prime \prime}$ (such that $v=\lambda_{m} \bar{y} \cdot w \bar{y}$ and $\bar{y} \notin \mathrm{fv}(w)$ or $v=\lambda_{m} \bar{y} \cdot u_{1}^{\prime}[\bar{y}:=c(c \bar{y})]$ ). Then, $\operatorname{hlr}\left(u_{1}\left[\bar{x}:=c\left(c u_{2}\right)\right]\right)=\operatorname{hlr}\left(v\left[\bar{x}:=c\left(c u_{2}\right)\right] u_{1}^{\prime \prime}\left[\bar{x}:=c\left(c u_{2}\right)\right]\right)={ }^{F .2} \operatorname{hlr}\left(v\left[\bar{x}:=c\left(c u_{2}\right)\right]\right) \cup$ $\operatorname{hlr}\left(u_{1}^{\prime \prime}\left[\bar{x}:=c\left(c u_{2}\right)\right]\right) \cup\{\langle 1, m\rangle\} \subseteq^{I H} \operatorname{hlr}\left(\left(\lambda_{n} \bar{x} \cdot v[\bar{x}:=c(c \bar{x})]\right) u_{2}\right) \cup h \operatorname{lr}\left(\left(\lambda_{n} \bar{x} . u_{1}^{\prime \prime}[\bar{x}:=c(c \bar{x})]\right) u_{2}\right) \cup$ $\{\langle 1, m\rangle\}={ }^{F \cdot 2} \operatorname{hlr}(v) \cup h \operatorname{lr}\left(u_{1}^{\prime \prime}\right) \cup \operatorname{hlr}\left(u_{2}\right) \cup\{\langle 1, n\rangle,\langle 1, m\rangle\}=F \cdot 2 \operatorname{hlr}\left(\left(\lambda_{n} \bar{x} \cdot\left(v u_{1}^{\prime \prime}\right)[\bar{x}:=c(c \bar{x})]\right) u_{2}\right)$.
- Let $u_{1}=c u_{1}^{\prime}$. Then, $\operatorname{hlr}\left(u_{1}\left[\bar{x}:=u_{2}\right]\right)=\operatorname{hlr}\left(c u_{1}^{\prime}\left[\bar{x}:=c\left(c u_{2}\right)\right]\right)=^{F .2} \operatorname{hlr}\left(u_{1}^{\prime}\left[\bar{x}:=c\left(c u_{2}\right)\right]\right) \subseteq^{I H}$ $\operatorname{hlr}\left(\left(\lambda_{n} \bar{x} \cdot u_{1}^{\prime}[\bar{x}:=c(c \bar{x})]\right) u_{2}\right)={ }^{F .2} \operatorname{hlr}\left(u_{1}^{\prime}\right) \cup \operatorname{hlr}\left(u_{2}\right) \cup\{\langle 1, n\rangle\}={ }^{F .2} \operatorname{hlr}\left(\left(\lambda_{n} \bar{x} \cdot\left(c u_{1}^{\prime}\right)[\bar{x}:=\right.\right.$ $\left.c(c \bar{x})]) u_{2}\right)$.

Lemma F.4. If $t_{1} \subseteq t_{2}$ then $\operatorname{hlr}\left(t_{1}\right) \subseteq \operatorname{hlr}\left(t_{2}\right)$.
Proof: We prove the lemma by induction on the structure of $t_{2}$.

- Let $t_{2}=x$, then it is done because by definition $t_{1}=x$.
- Let $t_{2}=\lambda_{n} x . t_{0}$ then by definition:
- Either $t_{1}=t_{2}$ so it is done.
- Or $t_{1} \subseteq t_{0}$. Then $\operatorname{hlr}\left(t_{1}\right) \subseteq^{I H} \operatorname{hlr}\left(t_{0}\right) \subseteq^{F .2} \operatorname{hlr}\left(t_{2}\right)$.
- Let $t_{2}=t_{3} t_{4}$ then by definition:
- Either $t_{1}=t_{2}$ so it is done.
- Or $t_{1} \subseteq t_{3}$. Then $\mathrm{hlr}\left(t_{1}\right) \subseteq^{I H} \operatorname{hlr}\left(t_{3}\right) \subseteq^{F .2} \operatorname{hlr}\left(t_{2}\right)$.
- Or $t_{1} \subseteq t_{4}$. Then $\operatorname{hlr}\left(t_{1}\right) \subseteq^{I H} \operatorname{hlr}\left(t_{4}\right) \subseteq^{F .2} \operatorname{hlr}\left(t_{2}\right)$.

Proof(Lemma 8.5): We prove this lemma by induction on the size of $u$ and then by case on the structure of $u$.

- Let $u=\bar{x}$ then it is done because $\bar{x}$ does not reduce by $\rightarrow_{\beta \eta}$.
- Let $u=\lambda_{n} \bar{x} \cdot u_{1}[\bar{x}:=c(c \bar{x})]$. Because $u \xrightarrow{p}_{\beta \eta} u^{\prime}$, then by lemma 2.2.8, lemma 5.4.3 and lemma 5.2.13a, $p=1 . p^{\prime}, u^{\prime}=\lambda_{n} \bar{x} \cdot u_{1}^{\prime}[\bar{x}:=c(c \bar{x})]$ and $u_{1} \xrightarrow{p^{\prime}} \beta \eta u_{1}^{\prime}$. By IH, $\operatorname{hlr}\left(u_{1}^{\prime}\right) \subseteq \operatorname{hlr}\left(u_{1}\right)$. So, by lemma F.2, $\operatorname{hlr}\left(u^{\prime}\right)=\operatorname{hlr}\left(u_{1}^{\prime}\right) \subseteq \operatorname{hlr}\left(u_{1}\right)=\operatorname{hlr}(u)$.
- Let $u=\lambda_{n} \bar{x}$. $w \bar{x}$ and $\bar{x} \notin \operatorname{fv}(w)$. Because $u \xrightarrow{p}_{\beta \eta} u^{\prime}$, by lemma 2.2.8 and lemma 5.3:
- Either $p=0$ and $u^{\prime}=w$. So $\operatorname{hlr}\left(u^{\prime}\right) \subseteq^{F .4} \operatorname{hlr}(u)$.
- Or $p=1 . p^{\prime}, w \bar{x}{\xrightarrow{p^{\prime}}}_{\beta \eta} u_{1}^{\prime}$ and $u^{\prime}=\lambda_{n} \bar{x} \cdot u_{1}^{\prime}$. By IH, $\operatorname{hlr}\left(u_{1}^{\prime}\right) \subseteq \operatorname{hlr}(w \bar{x})$. So, $\operatorname{hlr}\left(u^{\prime}\right) \subseteq^{F .2}$ $\operatorname{hlr}\left(u_{1}^{\prime}\right) \cup\{\langle 2, n\rangle\} \subseteq \operatorname{hlr}(w \bar{x}) \cup\{\langle 2, n\rangle\}={ }^{F \cdot 2} \operatorname{hlr}(t)$.
- Let $u=\left(\lambda_{n} \bar{x} \cdot w \bar{x}\right) u_{1}$ such that $\bar{x} \notin \mathrm{fv}(w)$. Because $u \xrightarrow{p}_{\beta \eta} u^{\prime}$, by lemma 2.2.8 and lemma 5.3:
- Either $p=0$. So $u^{\prime}=w u_{1}$. By case on $w$ :
* Either $w$ is a $v$ and so $u^{\prime} \in \mathcal{R}^{\beta \eta}$. Let $\langle 1, m\rangle=\operatorname{headlam}\left(u^{\prime}\right)$ then $\operatorname{hlr}\left(u^{\prime}\right)=^{F .2} \operatorname{hlr}(w) \cup$ $\operatorname{hlr}\left(u_{1}\right) \cup\{\langle 1, m\rangle\} \subseteq^{F .2} \operatorname{hlr}(u)$.
* Or $w=c u_{2}$ and so $u^{\prime} \notin \mathcal{R}^{\beta \eta}$. Then $\operatorname{hlr}\left(u^{\prime}\right)==^{F .2} \operatorname{hlr}(w) \cup \operatorname{hlr}\left(u_{1}\right) \subseteq^{F .2} \operatorname{hlr}(u)$.
- Or $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{\lambda_{n} \bar{x} . w \bar{x}}^{\beta \eta}$. So $u^{\prime}=u_{1}^{\prime} u_{1}$ such that $\lambda_{n} \bar{x} . w \bar{x} \xrightarrow{p^{\prime}} \beta \eta u_{1}^{\prime}$. By IH, $\operatorname{hlr}\left(u_{1}^{\prime}\right) \subseteq \operatorname{hlr}\left(\lambda_{n} \bar{x} \cdot w \bar{x}\right)$. By lemma 5.3:
* Either $p^{\prime}=0$ and $u_{1}^{\prime}=w$, so $u^{\prime}=w u_{1}$. By case on $w$ :
- Either $w$ is a $v$ and so $u^{\prime} \in \mathcal{R}^{\beta \eta}$. Let $\langle 1, m\rangle=\operatorname{headlam}\left(u^{\prime}\right)$ then $\operatorname{hlr}\left(u^{\prime}\right)={ }^{F .2}$ $\operatorname{hlr}(w) \cup \operatorname{hlr}\left(u_{1}\right) \cup\{\langle 1, m\rangle\} \subseteq^{F .2} \operatorname{hlr}(u)$.
- Or $w=c u_{2}$ and so $u^{\prime} \notin \mathcal{R}^{\beta \eta}$. Then $\operatorname{hlr}\left(u^{\prime}\right)={ }^{F .2} \operatorname{hlr}(w) \cup \operatorname{hlr}\left(u_{1}\right) \subseteq^{F .2} \operatorname{hlr}(u)$.
* Or $p^{\prime}=1 . p^{\prime \prime}, u_{1}^{\prime}=\lambda_{n} \bar{x} \cdot u_{2}$ and $w \bar{x} \xrightarrow{p^{\prime \prime}}{ }_{\beta \eta} u_{2}$. Then, $\operatorname{hlr}\left(u^{\prime}\right)=^{F .2} \operatorname{hlr}\left(u_{1}^{\prime}\right) \cup \operatorname{hlr}\left(u_{1}\right) \cup$ $\{\langle 1, n\rangle\} \subseteq \operatorname{hlr}\left(\lambda_{n} \bar{x} \cdot w \bar{x}\right) \cup \operatorname{hlr}\left(u_{1}\right) \cup\{\langle 1, n\rangle\}=F .2 \operatorname{hlr}(t)$.
- Or $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{u_{1}}^{\beta \eta}$. So $u^{\prime}=\left(\lambda_{n} \bar{x} . w x\right) u_{1}^{\prime}$ such that $u_{1}{ }^{p^{\prime}}{ }_{\beta \eta} u_{1}^{\prime}$. By IH, $\operatorname{hlr}\left(u_{1}^{\prime}\right) \subseteq \operatorname{hlr}\left(u_{1}\right)$. So, $\operatorname{hlr}\left(u^{\prime}\right)={ }^{F \cdot 2} \operatorname{hlr}\left(\lambda_{n} \bar{x} \cdot w \bar{x}\right) \cup \operatorname{hlr}\left(u_{1}^{\prime}\right) \cup\{\langle 1, n\rangle\} \subseteq \operatorname{hlr}\left(\lambda_{n} \bar{x} \cdot w \bar{x}\right) \cup$ $\operatorname{hlr}\left(u_{1}\right) \cup\{\langle 1, n\rangle\}={ }^{F \cdot 2} \operatorname{hlr}(u)$.
- Let $u=\left(\lambda_{n} \bar{x} \cdot u_{1}[\bar{x}:=c(c \bar{x})]\right) u_{2}$. Because $u \xrightarrow{p}{ }_{\beta \eta} u^{\prime}$, by lemma 2.2.8 and lemma 5.3:
- Either $p=0$. So $u^{\prime}=u_{1}\left[\bar{x}:=c\left(c u_{2}\right)\right]$. By lemma F.3, $\operatorname{hlr}\left(u^{\prime}\right) \subseteq \operatorname{hlr}(u)$.
- Or $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{\lambda_{n} \bar{x}, u_{1}[\bar{x}:=c(c \bar{x})]}^{\beta \eta}$. So $u^{\prime}=u_{1}^{\prime} u_{2}$ such that $\lambda_{n} \bar{x} . u_{1}[\bar{x}:=$ $c(c \bar{x})]{ }^{p^{\prime}}{ }_{\beta \eta} u_{1}^{\prime}$. By $\mathrm{IH}, \operatorname{hlr}\left(u_{1}^{\prime}\right) \subseteq \operatorname{hlr}\left(\lambda_{n} \bar{x} \cdot u_{1}[\bar{x}:=c(c \bar{x})]\right)$. By lemma 2.2.8, lemma 5.4.3, lemma 5.4.4 and lemma 5.2.13a, $p^{\prime}=1 . p^{\prime \prime}, u_{1}^{\prime}=\lambda_{n} \bar{x} \cdot u_{1}^{\prime \prime}[\bar{x}:=c(c \bar{x})]$ and $u_{1} \xrightarrow{p^{\prime \prime}} \beta_{\eta} u_{1}^{\prime \prime}$. Then, $\operatorname{hlr}\left(u^{\prime}\right){ }^{F .2} \operatorname{hlr}\left(u_{1}^{\prime}\right) \cup \operatorname{hlr}\left(u_{2}\right) \cup\{\langle 1, n\rangle\} \subseteq \operatorname{hlr}\left(\lambda_{n} \bar{x} \cdot u_{1}[\bar{x}:=c(c \bar{x})]\right) \cup \operatorname{hlr}\left(u_{2}\right) \cup$ $\{\langle 1, n\rangle\}={ }^{F .2} \operatorname{hlr}(u)$.
 $\mathrm{IH}, \operatorname{hlr}\left(u_{2}^{\prime}\right) \subseteq \operatorname{hlr}\left(u_{2}\right)$. So, $\operatorname{hlr}\left(u^{\prime}\right)={ }^{F \cdot 2} \operatorname{hlr}\left(\lambda_{n} \bar{x} \cdot u_{1}[\bar{x}:=c(c \bar{x})]\right) \cup \operatorname{hlr}\left(u_{2}^{\prime}\right) \cup\{\langle 1, n\rangle\} \subseteq$ $\operatorname{hlr}\left(\lambda_{n} \bar{x} \cdot u_{1}[\bar{x}:=c(c \bar{x})]\right) \cup \operatorname{hlr}\left(u_{2}\right) \cup\{\langle 1, n\rangle\}={ }^{F \cdot 2} \operatorname{hlr}(u)$.
- Let $u=c u_{1} u_{2}$. Because $u \xrightarrow{p} \beta \eta u^{\prime}$, by lemma 2.2.8 and lemma 5.3:
- Either $p=1.2 \cdot p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{u_{1}}^{\beta \eta}$. So $u^{\prime}=c u_{1}^{\prime} u_{2}$ such that $u_{1}{\xrightarrow{p^{\prime}}}_{\beta \eta} u_{1}^{\prime}$. By IH, $\operatorname{hlr}\left(u_{1}^{\prime}\right) \subseteq \operatorname{hlr}\left(u_{1}\right)$. So, $\operatorname{hlr}\left(u^{\prime}\right)==^{F .2} \operatorname{hlr}\left(u_{1}^{\prime}\right) \cup \operatorname{hlr}\left(u_{2}\right) \subseteq \operatorname{hlr}\left(u_{1}\right) \cup \operatorname{hlr}\left(u_{2}\right)={ }^{F .2} \operatorname{hlr}(u)$.
- Or $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{u_{2}}^{\beta \eta}$. So $u^{\prime}=c u_{1} u_{2}^{\prime}$ such that $u_{2}{\xrightarrow{p^{\prime}}}_{\beta \eta} u_{2}^{\prime}$. By IH, $\operatorname{hlr}\left(u_{2}^{\prime}\right) \subseteq$ $\mathrm{hlr}\left(u_{2}\right)$. So, $\mathrm{hlr}\left(u^{\prime}\right){ }^{F \cdot 2} \operatorname{hlr}\left(u_{1}\right) \cup \operatorname{hlr}\left(u_{2}^{\prime}\right) \subseteq \operatorname{hlr}\left(u_{1}\right) \cup \operatorname{hlr}\left(u_{2}\right)={ }^{F .2} \operatorname{hlr}(u)$.
- Let $u=c u_{1}$. Because $u \xrightarrow{p}{ }_{\beta \eta} u^{\prime}$, by lemma 2.2.8 and lemma $5.3 p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{u_{1}}^{\beta \eta}$.

So $u^{\prime}=c u_{1}^{\prime}$ such that $u_{1} \xrightarrow{p^{\prime}} \beta \eta u_{1}^{\prime}$. By $\mathrm{IH}, \operatorname{hlr}\left(u_{1}^{\prime}\right) \subseteq \operatorname{hlr}\left(u_{1}\right)$. So, $\operatorname{hlr}\left(u^{\prime}\right)={ }^{F .2} \operatorname{hlr}\left(u_{1}^{\prime}\right) \subseteq$ $\operatorname{hlr}\left(u_{1}\right)={ }^{F .2} \operatorname{hlr}(u)$.
$\operatorname{Proof}\left(\right.$ Lemma 8.6.1): Note that $\Psi^{c}(M, \mathcal{F}) \neq \varnothing$. Then, it is sufficient to prove:

- $\langle M, \mathcal{F}\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle \Rightarrow \forall N \in \Psi^{c}(M, \mathcal{F}) . \exists N^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right) . N \rightarrow_{\beta \eta}^{*} N^{\prime}$ by induction on the reduction $\langle M, \mathcal{F}\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle$.
- If $\langle M, \mathcal{F}\rangle=\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle$ then it is done.
- Let $\langle M, \mathcal{F}\rangle \rightarrow_{\beta \eta d}\left\langle M^{\prime \prime}, \mathcal{F}^{\prime \prime}\right\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle$. By IH: $\forall N^{\prime \prime} \in \Psi^{c}\left(M^{\prime \prime}, \mathcal{F}^{\prime \prime}\right)$. $\exists N^{\prime} \in$ $\Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right) . N \rightarrow_{\beta \eta}^{*} N^{\prime \prime}$. By definition 8.3.2, there exist $p \in \mathcal{F}$ such that $M \xrightarrow{p} \beta \eta M^{\prime \prime}$ and $\mathcal{F}^{\prime \prime}$ is the set of $\beta \eta$-residuals in $M^{\prime \prime}$ of the set of redexes $\mathcal{F}$ in $M$ relative to $p$. By definition 1 we obtain: $\forall N \in \Psi^{c}(M, \mathcal{F}) . \exists N^{\prime \prime} \in \Psi^{c}\left(M^{\prime \prime}, \mathcal{F}^{\prime \prime}\right) . N \rightarrow_{\beta \eta} N^{\prime \prime}$.
- $\exists N \in \Psi^{c}(M, \mathcal{F}) . \exists N^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right) . N \rightarrow_{\beta \eta}^{*} N^{\prime} \Rightarrow\langle M, \mathcal{F}\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle$ by induction on the reduction $N \rightarrow_{\beta \eta}^{*} N^{\prime}$ such that $N \in \Psi^{c}(M, \mathcal{F})$ and $N^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$.
- If $N=N^{\prime}$ then by lemma 8.2.2b, $M=M^{\prime}$ and $\mathcal{F}=\mathcal{F}^{\prime}$.
- Let $N \rightarrow_{\beta \eta} N^{\prime \prime} \rightarrow_{\beta \eta}^{*} N^{\prime}$. By lemma 8.2.1c, $N \in \Lambda \eta_{c}$, so by lemma $2, N^{\prime \prime} \in \Lambda \eta_{c}$. By lemma 8.2.2b, $\left.\left.\langle | N^{\prime \prime}\right|^{c},\left|\left\langle N^{\prime \prime}, \mathcal{R}_{N^{\prime \prime}}^{\beta \eta}\right\rangle\right|^{c}\right\rangle$ is the one and only pair such that $c \notin F V\left(\left|N^{\prime \prime}\right|^{c}\right)$, $\left|\left\langle N^{\prime \prime}, \mathcal{R}_{N^{\prime \prime}}^{\beta \eta}\right\rangle\right|^{c} \subseteq \mathcal{R}_{\left|N^{\prime \prime}\right| c}^{\beta \eta}$ and $N^{\prime \prime} \in \Psi^{c}\left(\left|N^{\prime \prime}\right|^{c},\left|\left\langle N^{\prime \prime}, \mathcal{R}_{N^{\prime \prime}}^{\beta \eta}\right\rangle\right|^{c}\right)$.
So by IH, $\left.\left.\langle | N^{\prime \prime}\right|^{c},\left|\left\langle N^{\prime \prime}, \mathcal{R}_{N^{\prime \prime}}^{\beta \eta}\right\rangle\right|^{c}\right\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M^{\prime}, \mathcal{F}^{\prime}\right\rangle$. By definition, there exists $p$ such that $N \xrightarrow{p}_{\beta \eta} N^{\prime \prime}$ and by lemma 2.2.8, $p \in \mathcal{R}_{N}^{\beta \eta}$. By lemmas 5.8.7a and lemma 8.2.1g, $M=$ $|N|^{c}{\xrightarrow{p_{0}}}_{\beta \eta}\left|N^{\prime \prime}\right|^{c}$ such that $|\langle N, p\rangle|^{c}=p_{0}$. So by lemma 2.2.8, $p_{0} \in \mathcal{R}_{M}^{\beta \eta}$. By definition 1, there exists a unique $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{\left|N^{\prime \prime}\right| c}^{\beta \eta}$, such that for all $P \in \Psi^{c}(M, \mathcal{F})$, there exist $P^{\prime} \in \Psi^{c}\left(\left.\left|N^{\prime \prime}\right|\right|^{c}, \mathcal{F}^{\prime}\right)$ and $p_{0}^{\prime} \in \mathcal{R}_{P}^{\beta \eta}$ such that $P{\xrightarrow{p_{0}^{\prime}}}_{\beta \eta} P^{\prime}$ and $\left|\left\langle P, p_{0}^{\prime}\right\rangle\right|^{c}=p_{0}=|\langle N, p\rangle|^{c}$. Moreover, $\mathcal{F}^{\prime}$ is called the set of $\beta \eta$-residuals in $\left|N^{\prime \prime}\right|^{c}$ of the set of redexes $\mathcal{F}$ in $M$ relative to $|\langle N, p\rangle|^{c}$. Since $N \in \Psi^{c}(M, \mathcal{F})$, there exist $P^{\prime} \in \Psi^{c}\left(\left|N^{\prime \prime}\right|^{c}, \mathcal{F}^{\prime}\right)$ and $p^{\prime} \in \mathcal{R}_{N}^{\beta \eta}$ such that $N \xrightarrow{p^{\prime}} \beta \eta P^{\prime}$ and $\left|\left\langle N, p^{\prime}\right\rangle\right|^{c}=|\langle N, p\rangle|^{c}$. By lemma 1, $p=p^{\prime}$, so by lemma 2.2.9, $P^{\prime}=N^{\prime \prime}$. Since $N^{\prime \prime} \in \Psi^{c}\left(\left|N^{\prime \prime}\right| c, \mathcal{F}^{\prime}\right)$, by lemma 8.2.2b, $\mathcal{F}^{\prime}=\left|\left\langle N^{\prime \prime}, \mathcal{R}_{N^{\prime \prime}}^{\beta \eta}\right\rangle\right|^{c}$. Finally, by definition 8.3.2, $\left.\left.\langle M, \mathcal{F}\rangle \rightarrow_{\beta \eta d}\langle | N^{\prime \prime}\right|^{c},\left|\left\langle N^{\prime \prime}, \mathcal{R}_{N^{\prime \prime}}^{\beta \eta}\right\rangle\right|^{c}\right\rangle$.
$\operatorname{Proof}\left(\right.$ Lemma 8.6.2): $\quad$ By lemma 8.2.1c, $\Psi^{c}\left(M, \mathcal{F}_{1}\right), \Psi^{c}\left(M, \mathcal{F}_{2}\right) \subseteq \Lambda \eta_{c}$. For all $N_{1} \in \Psi^{c}\left(M, \mathcal{F}_{1}\right)$ and $N_{2} \in \Psi^{c}\left(M, \mathcal{F}_{2}\right)$, by lemma 8.2.1g, $\left|N_{1}\right|^{c}=\left|N_{2}\right|^{c}$ and by lemma 8.2.1h, $\left|\left\langle N_{1}, \mathcal{R}_{N_{1}}^{\beta \eta}\right\rangle\right|^{c}=\mathcal{F}_{1} \subseteq$ $\mathcal{F}_{2}=\left|\left\langle N_{2}, \mathcal{R}_{N_{2}}^{\beta \eta}\right\rangle\right|^{c}$.

If $\left\langle M, \mathcal{F}_{1}\right\rangle \xrightarrow{N_{\beta \eta d}}\left\langle M^{\prime}, \mathcal{F}_{1}^{\prime}\right\rangle$ then by lemma 8.6.1, there exist $N_{1} \in \Psi^{c}\left(M, \mathcal{F}_{1}\right)$ and $N_{1}^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}_{1}^{\prime}\right)$ such that $N_{1} \rightarrow_{\beta \eta} N_{1}^{\prime}$. By definition, there exists $p_{1}$ such that $N_{1}{ }^{p_{1}}{ }_{\beta \eta} N_{1}^{\prime}$, and by lemma 2.2.8, $p_{1} \in \mathcal{R}_{N_{1}}^{\beta \eta}$. Let $p_{0}=\left|\left\langle N_{1}, p_{1}\right\rangle\right|^{c}$, so by lemma 8.2.1h, $p_{0} \in \mathcal{F}_{1}$. By lemma 5.8.7a and lemma 8.2.1g, $M \xrightarrow{p_{0}}{ }_{\beta \eta} M^{\prime}$.

By lemma 8.2.3 there exists a unique set $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta \eta}$ such that for all $P_{1} \in \Psi^{c}\left(M, \mathcal{F}_{1}\right)$ there exist $P_{1}^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$ and $p^{\prime} \in \mathcal{R}_{P_{1}}^{\beta \eta}$ such that $P_{1} \stackrel{p}{\rightarrow}_{\beta \eta} P_{1}^{\prime}$ and $\left|\left\langle P_{1}, p^{\prime}\right\rangle\right|^{c}=p_{0}$.

Because, $N_{1} \in \Psi^{c}\left(M, \mathcal{F}_{1}\right)$, there exist $P_{1}^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$ and $p^{\prime} \in \mathcal{R}_{N_{1}}^{\beta \eta}$ such that $N_{1} \xrightarrow{p^{\prime}}{ }_{\beta \eta} P_{1}^{\prime}$ and $\left|\left\langle N_{1}, p^{\prime}\right\rangle\right|^{c}=p_{0}$. Since $p^{\prime}, p_{1} \in \mathcal{R}_{N_{1}}^{\beta \eta}$, by lemma 1, $p^{\prime}=p_{1}$, so by lemma 2.2.9, $P_{1}^{\prime}=N_{1}^{\prime}$. By lemma 8.2.1h, $\mathcal{F}^{\prime}=\left|\left\langle N_{1}^{\prime}, \mathcal{R}_{N_{1}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}=\mathcal{F}_{1}^{\prime}$.

By lemma 8.2.3 there exists a unique set $\mathcal{F}_{2}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta \eta}$, such that for all $P_{2} \in \Psi^{c}\left(M, \mathcal{F}_{2}\right)$ there exist $P_{2}^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}_{2}^{\prime}\right)$ and $p_{2} \in \mathcal{R}_{P_{2}}^{\beta \eta}$ such that $P_{2}{ }_{\beta \eta}^{p_{2}} P_{2}^{\prime}$ and $\left|\left\langle P_{2}, p_{2}\right\rangle\right|^{c}=p_{0}$.

Since $\Psi^{c}\left(M, \mathcal{F}_{2}\right) \neq \varnothing$, let $N_{2} \in \Psi^{c}\left(M, \mathcal{F}_{2}\right)$. So, there exist $N_{2}^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}_{2}^{\prime}\right)$ and $p_{2} \in \mathcal{R}_{N_{2}}^{\beta \eta}$ such that $N_{2} \xrightarrow{p_{2}}{ }_{\beta \eta} N_{2}^{\prime}$ and $\left|\left\langle N_{2}, p_{2}\right\rangle\right|^{c}=p_{0}$. By lemma 8.2.1h, $\mathcal{F}_{2}^{\prime}=\left|\left\langle N_{2}^{\prime}, \mathcal{R}_{N_{2}^{\prime}}^{\beta \eta}\right\rangle\right|^{c}$.

Hence, by lemma 5.8.7c, $\mathcal{F}_{1}^{\prime} \subseteq \mathcal{F}_{2}^{\prime}$ and by lemma 8.6.1, $\left\langle M, \mathcal{F}_{2}\right\rangle \rightarrow_{\beta \eta d}\left\langle M^{\prime}, \mathcal{F}_{2}^{\prime}\right\rangle$.
$\operatorname{Proof}\left(\right.$ Lemma 8.7): If $M{\xrightarrow{\mathcal{F}_{1}}}_{\beta \eta d} M_{1}$ and $M \xrightarrow{\mathcal{F}_{2}} \beta \eta \eta d M_{2}$, then there exist $\mathcal{F}_{1}^{\prime \prime}, \mathcal{F}_{2}^{\prime \prime}$ such that $\left\langle M, \mathcal{F}_{1}\right\rangle \rightarrow_{\beta \eta d}^{*}$ $\left\langle M_{1}, \mathcal{F}_{1}^{\prime \prime}\right\rangle$ and $\left\langle M, \mathcal{F}_{2}\right\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M_{2}, \mathcal{F}_{2}^{\prime \prime}\right\rangle$. By definitions 8.3.1 and 8.3.2, $\mathcal{F}_{1}^{\prime \prime} \subseteq \mathcal{R}_{M_{1}}^{\beta \eta}$ and $\mathcal{F}_{2}^{\prime \prime} \subseteq \mathcal{R}_{M_{2}}^{\beta \eta}$. By lemma 8.6.2, there exist $\mathcal{F}_{1}^{\prime \prime \prime} \subseteq \mathcal{R}_{M_{1}}^{\beta \eta}$ and $\mathcal{F}_{2}^{\prime \prime \prime} \subseteq \mathcal{R}_{M_{2}}^{\beta \eta}$ such that $\left\langle M, \mathcal{F}_{1} \cup \mathcal{F}_{2}\right\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M_{1}, \mathcal{F}_{1}^{\prime \prime} \cup \mathcal{F}_{1}^{\prime \prime \prime}\right\rangle$ and $\left.\left\langle M, \mathcal{F}_{1} \cup \mathcal{F}_{2}\right\rangle \rightarrow{ }_{\beta} \boldsymbol{*} \eta d<M_{2}, \mathcal{F}_{2}^{\prime \prime} \cup \mathcal{F}_{2}^{\prime \prime \prime}\right\rangle$. By lemma 8.6.1 there exist $T \in \Psi^{c}\left(M, \mathcal{F}_{1} \cup \mathcal{F}_{2}\right), T_{1} \in$ $\Psi^{c}\left(M_{1}, \mathcal{F}_{1}^{\prime \prime} \cup \mathcal{F}_{1}^{\prime \prime \prime}\right)$ and $T_{2} \in \Psi^{c}\left(M_{2}, \mathcal{F}_{2}^{\prime \prime} \cup \mathcal{F}_{2}^{\prime \prime \prime}\right)$ such that $T \rightarrow_{\beta \eta}^{*} T_{1}$ and $T \rightarrow_{\beta \eta}^{*} T_{2}$.

Because by lemma 8.2.1c, $T \in \Lambda \eta_{c}$ and by lemma $6.6 .2, T$ is typable in the type system $\mathcal{D}$, so $T \in$ $\mathrm{CR}^{\beta \eta}$ by corollary 6.5 . So, by lemma 2.2 a, there exists $T_{3} \in \Lambda \eta_{c}$, such that $T_{1} \rightarrow{ }_{\beta \eta}^{*} T_{3}$ and $T_{2} \rightarrow_{\beta \eta}^{*} T_{3}$. Let $\mathcal{F}_{3}=\left|\left\langle T_{3}, \mathcal{R}_{T_{3}}^{\beta \eta}\right\rangle\right|^{c}$ and $M_{3}=\left|T_{3}\right|^{\beta \eta}$, then by lemma 8.2.2a, $\mathcal{F}_{3} \subseteq \mathcal{R}_{M_{3}}^{\beta \eta}$ and $T_{3} \in \Psi^{c}\left(M_{3}, \mathcal{F}_{3}\right)$. Hence, by lemma 8.6.1, $\left\langle M_{1}, \mathcal{F}_{1}^{\prime \prime} \cup \mathcal{F}_{1}^{\prime \prime \prime}\right\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M_{3}, \mathcal{F}_{3}\right\rangle$ and $\left\langle M_{2}, \mathcal{F}_{2}^{\prime \prime} \cup \mathcal{F}_{2}^{\prime \prime \prime}\right\rangle \rightarrow_{\beta \eta d}^{*}\left\langle M_{3}, \mathcal{F}_{3}\right\rangle$, i.e. $M_{1} \xrightarrow{\mathcal{F}_{1}^{\prime \prime} \cup \mathcal{F}_{1}^{\prime \prime \prime}}{ }_{\beta \eta d} M_{3}$ and $M_{2} \xrightarrow{\mathcal{F}_{2}^{\prime \prime} \cup \mathcal{F}_{2}^{\prime \prime \prime}}{ }_{\beta \eta d} M_{3}$.
$\operatorname{Proof}\left(\right.$ Lemma 8.9.1): $\quad$ Note that $\varnothing \subseteq \mathcal{R}_{M}^{\beta \eta}$. We prove this statement by induction on the structure of M.

- Let $M \in \mathcal{V} \backslash\{c\}$ then $\Psi^{c}(M, \varnothing)=\left\{c^{n}(M) \mid n \geq 0\right\}$ and $\mathcal{R}_{c^{n}(M)}^{\beta \eta}=\varnothing$, where $n \geq 0$, by lemma 5.3 and lemma 5.4.5.
- Let $M=\lambda x . N$ such that $x \neq c$ then $\Psi^{c}(M, \varnothing)=\left\{c^{n}(\lambda x \cdot Q[x:=c(c x)]) \mid n \geq 0 \wedge Q \in\right.$ $\left.\Psi^{c}(N, \varnothing)\right\}$. Let $P \in \Psi^{c}(M, \varnothing)$, then $P=c^{n}(\lambda x \cdot Q[x:=c(c x)])$ such that $n \geq 0$ and $Q \in$ $\Psi^{c}(N, \varnothing)$ By IH, $\mathcal{R}_{Q}^{\beta \eta}=\varnothing$ and by lemma 5.4.4, lemma 5.4.3 and lemma 5.4.5, $\mathcal{R}_{P}^{\beta \eta}=\varnothing$.
- Let $M=M_{1} M_{2}$ then $\Psi^{c}(M, \varnothing)=\left\{c^{n}\left(c Q_{1} Q_{2}\right) \mid n \geq 0 \wedge Q_{1} \in \Psi^{c}\left(M_{1}, \varnothing\right) \wedge Q_{2} \in \Psi^{c}\left(M_{2}, \varnothing\right)\right\}$. Let $P \in \Psi^{c}(M, \varnothing)$, then $P=c^{n}\left(c Q_{1} Q_{2}\right)$ such that $n \geq 0, Q_{1} \in \Psi^{c}\left(M_{1}, \varnothing\right)$ and $Q_{2} \in$ $\Psi^{c}\left(M_{2}, \varnothing\right)$. By IH, $\mathcal{R}_{Q_{1}}^{\beta \eta}=\mathcal{R}_{Q_{2}}^{\beta \eta}=\varnothing$ and by lemma 5.3 and lemma 5.4.5, $\mathcal{R}_{P}^{\beta \eta}=\varnothing$.

Proof(Lemma 8.9.2): We prove the statement by induction on the structure of $M$.

- Let $M \in \mathcal{V} \backslash\{c\}$, then $\Psi^{c}(M, \varnothing)=\left\{c^{n}(M) \mid n \geq 0\right\}$. Let $P \in \Psi^{c}(M, \varnothing)$ and $Q \in \Psi^{c}(N, \varnothing)$, then $P=c^{n}(M)$ where $n \geq 0$.
- Either $M=x$, then $P[x:=Q]=c^{n}(Q)$ and by lemma 8.2.1f and lemma $1, \mathcal{R}_{c^{n}(Q)}^{\beta \eta}=\varnothing$.
- Or $M \neq x$, then $P[x:=Q]=P$ and by lemma $1, \mathcal{R}_{P}^{\beta \eta}=\varnothing$.
- Let $M=\lambda y \cdot M^{\prime}$ such that $y \neq c$ then $\Psi^{c}(M, \varnothing)=\left\{c^{n}\left(\lambda y \cdot P^{\prime}[y:=c(c y)]\right) \mid n \geq 0 \wedge P^{\prime} \in\right.$ $\left.\Psi^{c}\left(M^{\prime}, \varnothing\right)\right\}$. Let $P \in \Psi^{c}(M, \varnothing)$ and $Q \in \Psi^{c}(N, \varnothing)$, then $P=c^{n}\left(\lambda y \cdot P^{\prime}[y:=c(c y)]\right)$ where
 By IH, $\mathcal{R}_{P^{\prime}[x:=Q]}^{\beta \eta}=\varnothing$ and by lemmas 5.4.4, 5.4.3 and 5.4.5, $\mathcal{R}_{P[x:=Q]}^{\beta \eta}=\varnothing$.
- Let $M=M_{1} M_{2}$ then $\Psi^{c}(M, \varnothing)=\left\{c^{n}\left(c P_{1} P_{2}\right) \mid n \geq 0 \wedge P_{1} \in \Psi^{c}\left(M_{1}, \varnothing\right) \wedge P_{2} \in \Psi^{c}\left(M_{2}, \varnothing\right)\right\}$. Let $P \in \Psi^{c}(M, \varnothing)$ and $Q \in \Psi^{c}(N, \varnothing)$ then $P=c^{n}\left(c P_{1} P_{2}\right)$ where $n \geq 0, P_{1} \in \Psi^{c}\left(M_{1}, \varnothing\right)$ and $P_{2} \in \Psi^{c}\left(M_{2}, \varnothing\right)$. So, $\mathcal{R}_{P[x:=Q]}^{\beta \eta}=\mathcal{R}_{c^{n}\left(c P_{1}[x:=Q] P_{2}[x:=Q]\right)}^{\beta \eta}$. By IH, $\mathcal{R}_{P_{1}[x:=Q]}^{\beta \eta}=\mathcal{R}_{P_{2}[x:=Q]}^{\beta \eta}=\varnothing$ and by lemmas 5.3 and 5.4.5, $\mathcal{R}_{P[x:=Q]}^{\beta \eta}=\varnothing$.

Proof(Lemma 8.9.3): We prove the statement by induction on the structure of $M$.

- Let $M \in \mathcal{V} \backslash\{c\}$ then nothing to prove since by lemma 5.3, $\mathcal{R}_{M}^{\beta \eta}=\varnothing$.
- Let $M=\lambda x . N$ such that $x \neq c$.
- If $M \in \mathcal{R}^{\beta \eta}$ then $N=N_{0} x$ such that $x \notin F V\left(N_{0}\right)$ and by lemma 5.3, $\mathcal{R}_{M}^{\beta \eta}=\{0\} \cup\{1 . p \mid$ $\left.p \in \mathcal{R}_{N}^{\beta \eta}\right\}$. Let $p \in \mathcal{R}_{M}^{\beta \eta}$ then:
* Either $p=0$, then $\Psi^{c}(M,\{p\})=\left\{c^{n}\left(\lambda x . P^{\prime}\right) \mid n \geq 0 \wedge P^{\prime} \in \Psi_{0}^{c}(N, \varnothing)\right\}$. Let $P \in$ $\Psi^{c}(M,\{p\})$ then $P=c^{n}\left(\lambda x . P^{\prime}\right)$ such that $n \geq 0$ and $P^{\prime} \in \Psi_{0}^{c}(N, \varnothing)$. So $P^{\prime}=c P_{0}^{\prime} x$ such that $P_{0}^{\prime} \in \Psi^{c}\left(N_{0}, \varnothing\right)$. By lemmas 1 and 8.2.1a, $\mathcal{R}_{P^{\prime}}^{\beta \eta}=\varnothing$. If $P \rightarrow_{\beta \eta} Q$ then by definition, there exists $p_{0}$ such that $P{ }^{p_{0}}{ }_{\beta \eta} Q$. By lemma 5.2.13b and lemma 2.2.8, $Q=c^{n}\left(Q^{\prime}\right), p_{0}=2^{n} \cdot p_{0}^{\prime}$ and $\lambda x . P^{\prime}{\xrightarrow{p_{0}^{\prime}}}_{\beta \eta} Q^{\prime}$ such that $p_{0}^{\prime} \in \mathcal{R}_{\lambda x . P^{\prime}}^{\beta \eta}$. By lemma 8.2.1b, $x \notin \mathrm{fv}\left(c P_{0}^{\prime}\right)$. By lemmas 5.3, $\mathcal{R}_{\lambda x . P^{\prime}}^{\beta \eta}=\{0\} \cup\left\{1 . p \mid p \in \mathcal{R}_{P^{\prime}}^{\beta \eta}\right\}=\{0\}$. So $p_{0}^{\prime}=0$ and $Q^{\prime}=c P_{0}^{\prime}$. By lemma 1, $\mathcal{R}_{P_{0}^{\prime}}^{\beta \eta}=\varnothing$ and by lemma 5.4.5, $\mathcal{R}_{Q}^{\beta \eta}=\varnothing$.
* Or $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{N}^{\beta \eta}$. So $\Psi^{c}(M,\{p\})=\left\{c^{n}\left(\lambda x . P^{\prime}[x:=c(c x)]\right) \mid n \geq\right.$ $\left.0 \wedge P^{\prime} \in \Psi^{c}\left(N,\left\{p^{\prime}\right\}\right)\right\}$. Let $P \in \Psi^{c}(M,\{p\})$ then $P=c^{n}\left(\lambda x \cdot P^{\prime}[x:=c(c x)]\right)$ such that $n \geq 0$ and $P^{\prime} \in \Psi^{c}\left(N,\left\{p^{\prime}\right\}\right)$. If $P \rightarrow_{\beta \eta} Q$ then there exists $p_{0}$ such that $P{\xrightarrow{p_{0}}}_{\beta \eta} Q$. By lemma 5.2.13b, lemma 2.2.8, lemma 5.4.3 and lemma 5.2.13a, $p_{0}=2^{n}$.1. $p_{0}^{\prime}$ such that $p_{0}^{\prime} \in \mathcal{R}_{P^{\prime}}^{\beta \eta}$ and $Q=c^{n}\left(\lambda x \cdot Q^{\prime}[x:=c(c x)]\right)$ such that $P^{\prime}{\xrightarrow{p_{0}^{\prime}}}_{\beta \eta} Q^{\prime} . \mathrm{By} \mathrm{IH}, \mathcal{R}_{Q^{\prime}}^{\beta \eta}=\varnothing$, so by lemma 5.4.4, lemma 5.4.3 and lemma 5.4.5, $\mathcal{R}_{Q}^{\beta \eta}=\varnothing$.
- Else, by lemma 5.3, $\mathcal{R}_{M}^{\beta \eta}=\left\{1 . p \mid p \in \mathcal{R}_{N}^{\beta \eta}\right\}$. Let $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{N}^{\beta \eta}$. So $\Psi^{c}(M,\{p\})=\left\{c^{n}\left(\lambda x \cdot P^{\prime}[x:=c(c x)]\right) \mid n \geq 0 \wedge P^{\prime} \in \Psi^{c}\left(N,\left\{p^{\prime}\right\}\right)\right\}$. Let $P \in \Psi^{c}(M,\{p\})$ then $P=c^{n}\left(\lambda x . P^{\prime}[x:=c(c x)]\right)$ such that $n \geq 0$ and $P^{\prime} \in \Psi^{c}\left(N,\left\{p^{\prime}\right\}\right)$. If $P \rightarrow_{\beta \eta} Q$ then there exists $p_{0}$ such that $P{ }^{p_{0}}{ }_{\beta \eta} Q$. By lemma 5.2.13b, lemma 2.2.8, lemma 5.4.3 and lemma 5.2.13a, $p_{0}=2^{n}$.1. $p_{0}^{\prime}$ such that $p_{0}^{\prime} \in \mathcal{R}_{P^{\prime}}^{\beta \eta}$ and $Q=c^{n}\left(\lambda x . Q^{\prime}[x:=c(c x)]\right)$ such that $P^{\prime}{\xrightarrow{p_{0}^{\prime}}}_{\beta \eta} Q^{\prime}$. By IH, $\mathcal{R}_{Q^{\prime}}^{\beta \eta}=\varnothing$, so by lemma 5.4.4, lemma 5.4.3 and lemma 5.4.5, $\mathcal{R}_{Q}^{\beta \eta}=\varnothing$.
- Let $M=M_{1} M_{2}$.
- Let $M \in \mathcal{R}^{\beta \eta}$, then $M_{1}=\lambda x . M_{0}$ such that $x \neq c$ and by lemma 5.3, $\mathcal{R}_{M}^{\beta \eta}=\{0\} \cup\{1 . p \mid$ $\left.p \in \mathcal{R}_{M_{1}}^{\beta \eta}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{M_{2}}^{\beta \eta}\right\}$. Let $p \in \mathcal{R}_{M}^{\beta \eta}$ then:
* Either $p=0$ then $\Psi^{c}(M,\{p\})=\left\{c^{n}\left(P_{1} P_{2}\right) \mid n \geq 0 \wedge P_{1} \in \Psi_{0}^{c}\left(M_{1}, \varnothing\right) \wedge P_{2} \in\right.$ $\left.\Psi^{c}\left(M_{2}, \varnothing\right)\right\}$. Let $P \in \Psi^{c}(M,\{p\})$ then $P=c^{n}\left(P_{1} P_{2}\right)$ such that $n \geq 0, P_{1} \in$ $\Psi_{0}^{c}\left(M_{1}, \varnothing\right)$ and $P_{2} \in \Psi^{c}\left(M_{2}, \varnothing\right)$. By lemma 1 and lemma 8.2.1a, $\mathcal{R}_{P_{1}}^{\beta \eta}=\mathcal{R}_{P_{2}}^{\beta \eta}=\varnothing$. Since $P_{1} \in \Psi_{0}^{c}\left(M_{1}, \varnothing\right), P_{1}=\lambda x \cdot P_{0}[x:=c(c x)]$ such that $P_{0} \in \Psi^{c}\left(M_{0}, \varnothing\right)$. If $P \rightarrow \beta_{\eta} Q$ then by definition there exists $p_{0}$ such that $P \stackrel{p}{\rightarrow}_{\beta \eta} Q$. By lemma 5.2.13b and lemma 2.2.8, $Q=c^{n}\left(Q^{\prime}\right), p_{0}=2^{n} \cdot p_{0}^{\prime}$ and $P_{1} P_{2}{\xrightarrow{p_{0}^{\prime}}}_{\beta \eta} Q^{\prime}$ such that $p_{0}^{\prime} \in \mathcal{R}_{P_{1} P_{2}}^{\beta \eta}$. By lemma 5.3, $\mathcal{R}_{P_{1} P_{2}}^{\beta \eta}=\{0\}$. So $p_{0}^{\prime}=0$ and $Q=c^{n}\left(P_{0}\left[x:=c\left(c P_{2}\right)\right]\right)$. Because $c\left(c P_{2}\right) \in \Psi^{c}\left(M_{2}, \varnothing\right)$, by lemma 2 and lemma 5.4.5, $\mathcal{R}_{Q}^{\beta \eta}=\varnothing$.
* Or $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{M_{1}}^{\beta \eta}$. So, $\Psi^{c}(M,\{p\})=\left\{c^{n}\left(c P_{1} P_{2}\right) \mid n \geq 0 \wedge P_{1} \in\right.$ $\left.\Psi^{c}\left(M_{1},\left\{p^{\prime}\right\}\right) \wedge P_{2} \in \Psi^{c}\left(M_{2}, \varnothing\right)\right\}$. Let $P \in \Psi^{c}(M,\{p\})$ then $P=c^{n}\left(c P_{1} P_{2}\right)$ such that $n \geq 0, P_{1} \in \Psi^{c}\left(M_{1},\left\{p^{\prime}\right\}\right)$ and $P_{2} \in \Psi^{c}\left(M_{2}, \varnothing\right)$. By lemma 1, $\mathcal{R}_{P_{2}}^{\beta \eta}=\varnothing$. If $P \rightarrow{ }_{\beta \eta} Q$ then by definition there exists $p_{0}$ such that $P \xrightarrow{p_{0}} \beta \eta$. By lemma 5.2.13b and lemma 2.2.8, $p_{0}=2^{n} . p_{0}^{\prime}$ such that $p_{0}^{\prime} \in \mathcal{R}_{c P_{1} P_{2}}^{\beta \eta}$ and $Q=c^{n}\left(Q^{\prime}\right)$ such that $c P_{1} P_{2}{\xrightarrow{p_{0}^{\prime}}}_{\beta \eta}$ $Q^{\prime}$. By lemma 5.3, $\mathcal{R}_{c P_{1} P_{2}}^{\beta \eta}=\left\{1.2 . p \mid p \in \mathcal{R}_{P_{1}}^{\beta \eta}\right\}$. So $p_{0}^{\prime}=1.2 . p_{0}^{\prime \prime}$ such that $p_{0}^{\prime \prime} \in \mathcal{R}_{P_{1}}^{\beta \eta}$. So $Q^{\prime}=c Q_{1} P_{2}$ and $P_{1}{\xrightarrow{p_{0}^{\prime \prime}}}_{\beta \eta} Q_{1}$. By IH, $\mathcal{R}_{Q_{1}}^{\beta \eta}=\varnothing$, so by lemma 5.4.5, $\mathcal{R}_{Q}^{\beta \eta}=\varnothing$.
* Or $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{M_{2}}^{\beta \eta}$. So, $\Psi^{c}(M,\{p\})=\left\{c^{n}\left(c P_{1} P_{2}\right) \mid n \geq 0 \wedge P_{1} \in\right.$ $\left.\Psi^{c}\left(M_{1},\{\varnothing\}\right) \wedge P_{2} \in \Psi^{c}\left(M_{2}, p^{\prime}\right)\right\}$. Let $P \in \Psi^{c}(M,\{p\})$ then $P=c^{n}\left(c P_{1} P_{2}\right)$ such that $n \geq 0, P_{1} \in \Psi^{c}\left(M_{1},\{\varnothing\}\right)$ and $P_{2} \in \Psi^{c}\left(M_{2}, p^{\prime}\right)$. By lemma 1, $\mathcal{R}_{P_{1}}^{\beta \eta}=\varnothing$. If $P \rightarrow{ }_{\beta \eta} Q$ then by definition there exists $p_{0}$ such that $P \xrightarrow{p_{0}}{ }_{\beta \eta} Q$. By lemma 5.2.13b and lemma 2.2.8, $p_{0}=2^{n} . p_{0}^{\prime}$ such that $p_{0}^{\prime} \in \mathcal{R}_{c P_{1} P_{2}}^{\beta \eta}$ and $Q=c^{n}\left(Q^{\prime}\right)$ such that $c P_{1} P_{2}{\xrightarrow{p_{0}^{\prime}}}_{\beta \eta}$ $Q^{\prime}$. By lemma 5.3, $\mathcal{R}_{c P_{1} P_{2}}^{\beta \eta}=\left\{2 . p \mid p \in \mathcal{R}_{P_{2}}^{\beta \eta}\right\}$. So $p_{0}^{\prime}=2 . p_{0}^{\prime \prime}$ such that $p_{0}^{\prime \prime} \in \mathcal{R}_{P_{2}}^{\beta \eta}$. So $Q^{\prime}=c P_{1} Q_{2}$ and $P_{2}{\xrightarrow{p_{0}^{\prime \prime}}}_{\beta \eta} Q_{2}$. By IH, $\mathcal{R}_{Q_{2}}^{\beta \eta}=\varnothing$, so by lemma 5.4.5, $\mathcal{R}_{Q}^{\beta \eta}=\varnothing$.
- Let $M \notin \mathcal{R}^{\beta \eta}$, then by lemma 5.3, $\mathcal{R}_{M}^{\beta \eta}=\left\{1 . p \mid p \in \mathcal{R}_{M_{1}}^{\beta \eta}\right\} \cup\left\{2 . p \mid p \in \mathcal{R}_{M_{2}}^{\beta \eta}\right\}$.
* Either $p=1 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{M_{1}}^{\beta \eta}$. So, $\Psi^{c}(M,\{p\})=\left\{c^{n}\left(c P_{1} P_{2}\right) \mid n \geq 0 \wedge P_{1} \in\right.$ $\left.\Psi^{c}\left(M_{1},\left\{p^{\prime}\right\}\right) \wedge P_{2} \in \Psi^{c}\left(M_{2}, \varnothing\right)\right\}$. Let $P \in \Psi^{c}(M,\{p\})$ then $P=c^{n}\left(c P_{1} P_{2}\right)$ such that $n \geq 0, P_{1} \in \Psi^{c}\left(M_{1},\left\{p^{\prime}\right\}\right)$ and $P_{2} \in \Psi^{c}\left(M_{2}, \varnothing\right)$. By lemma 1, $\mathcal{R}_{P_{2}}^{\beta \eta}=\varnothing$. If $P \rightarrow{ }_{\beta \eta} Q$ then by definition there exists $p_{0}$ such that $P{ }^{p_{0}}{ }_{\beta \eta} Q$. By lemma 5.2 .13 b and lemma 2.2.8, $p_{0}=2^{n} \cdot p_{0}^{\prime}$ such that $p_{0}^{\prime} \in \mathcal{R}_{c P_{1} P_{2}}^{\beta \eta}$ and $Q=c^{n}\left(Q^{\prime}\right)$ such that $c P_{1} P_{2}{\xrightarrow{p_{0}^{\prime}}}_{\beta \eta}$ $Q^{\prime}$. By lemma 5.3, $\mathcal{R}_{c P_{1} P_{2}}^{\beta \eta}=\left\{1.2 . p \mid p \in \mathcal{R}_{P_{1}}^{\beta \eta}\right\}$. So $p_{0}^{\prime}=1.2 . p_{0}^{\prime \prime}$ such that $p_{0}^{\prime \prime} \in \mathcal{R}_{P_{1}}^{\beta \eta}$. So $Q^{\prime}=c Q_{1} P_{2}$ and $P_{1}{\xrightarrow{p_{0}^{\prime \prime}}}_{\beta \eta} Q_{1}$. By IH, $\mathcal{R}_{Q_{1}}^{\beta \eta}=\varnothing$, so by lemma 5.4.5, $\mathcal{R}_{Q}^{\beta \eta}=\varnothing$.
* Or $p=2 . p^{\prime}$ such that $p^{\prime} \in \mathcal{R}_{M_{2}}^{\beta \eta}$. So, $\Psi^{c}(M,\{p\})=\left\{c^{n}\left(c P_{1} P_{2}\right) \mid n \geq 0 \wedge P_{1} \in\right.$ $\left.\Psi^{c}\left(M_{1},\{\varnothing\}\right) \wedge P_{2} \in \Psi^{c}\left(M_{2}, p^{\prime}\right)\right\}$. Let $P \in \Psi^{c}(M,\{p\})$ then $P=c^{n}\left(c P_{1} P_{2}\right)$ such that $n \geq 0, P_{1} \in \Psi^{c}\left(M_{1},\{\varnothing\}\right)$ and $P_{2} \in \Psi^{c}\left(M_{2}, p^{\prime}\right)$. By lemma $1, \mathcal{R}_{P_{1}}^{\beta \eta}=\varnothing$. If $P \rightarrow_{\beta \eta} Q$ then by definition there exists $p_{0}$ such that $P \xrightarrow{p_{0}}{ }_{\beta \eta} Q$. By lemma 5.2.13b and
lemma 2.2.8, $p_{0}=2^{n} \cdot p_{0}^{\prime}$ such that $p_{0}^{\prime} \in \mathcal{R}_{c P_{1} P_{2}}^{\beta \eta}$ and $Q=c^{n}\left(Q^{\prime}\right)$ such that $c P_{1} P_{2}{\xrightarrow{p_{0}^{\prime}}}_{\beta \eta}$ $Q^{\prime}$. By lemma 5.3, $\mathcal{R}_{c P_{1} P_{2}}^{\beta \eta}=\left\{2 . p \mid p \in \mathcal{R}_{P_{2}}^{\beta \eta}\right\}$. So $p_{0}^{\prime}=2 . p_{0}^{\prime \prime}$ such that $p_{0}^{\prime \prime} \in \mathcal{R}_{P_{2}}^{\beta \eta}$. So $Q^{\prime}=c P_{1} Q_{2}$ and $P_{2}{\xrightarrow{p_{0}^{\prime \prime}}}_{\beta \eta} Q_{2}$. By IH, $\mathcal{R}_{Q_{2}}^{\beta \eta}=\varnothing$, so by lemma 5.4.5, $\mathcal{R}_{Q}^{\beta \eta}=\varnothing$.
$\operatorname{Proof}(L e m m a ~ 8.9 .4): \quad$ By lemma 2.2.8, $p \in \mathcal{R}_{M}^{\beta \eta}$. By lemma 8.2.3, there exists a unique set $\mathcal{F}^{\prime} \subseteq \mathcal{R}_{M^{\prime}}^{\beta \eta}$, such that for all $N \in \Psi^{c}(M,\{p\})$, there exists $N^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$ such that $N \rightarrow_{\beta \eta} N^{\prime}$. Note that $\Psi^{c}(M,\{p\}) \neq \varnothing$. Let $N \in \Psi^{c}(M,\{p\})$ then there exists $N^{\prime} \in \Psi^{c}\left(M^{\prime}, \mathcal{F}^{\prime}\right)$ such that $N \rightarrow_{\beta \eta} N^{\prime}$. By lemma 3, $\mathcal{R}_{N^{\prime}}^{\beta \eta}=\varnothing$, so $\left|\left\langle N^{\prime}, \mathcal{R}_{N^{\prime}}^{\beta \eta}\right\rangle\right|^{c}=\varnothing$ and by lemma 8.2.1h, $\mathcal{F}^{\prime}=\varnothing$. Finally, by lemma 8.6.1, $\langle M,\{p\}\rangle \rightarrow_{\beta \eta d}\left\langle M^{\prime}, \varnothing\right\rangle$.

Proof(Lemma 8.9.5): By definition $\rightarrow{ }_{1}^{*} \subseteq \rightarrow{ }_{\beta}^{*}$. We prove that $\rightarrow{ }_{\beta \eta}^{*} \subseteq \rightarrow_{1}^{*}$. Let $M, M^{\prime} \in \Lambda$ such that $c \notin \operatorname{fv}(M)$ and $M \rightarrow{ }_{\beta \eta}^{*} M^{\prime}$. We prove this claim by induction on $M \rightarrow_{\beta \eta}^{*} M^{\prime}$.

- Let $M=M^{\prime}$ then it is done since $\langle M, \mathcal{F}\rangle \rightarrow_{\beta \eta d}^{*}\langle M, \mathcal{F}\rangle$.
- Let $M \rightarrow_{\beta \eta}^{*} M^{\prime \prime} \rightarrow_{\beta \eta} M^{\prime}$. By IH, $M \rightarrow_{1}^{*} M^{\prime \prime}$. By definition there exists $p$ such that $M^{\prime \prime} \xrightarrow{p}_{\beta \eta}$ $M^{\prime}$. By lemma 2.2.3, $c \notin \operatorname{fv}\left(M^{\prime \prime}\right)$. By lemma $4,\left\langle M^{\prime \prime},\{p\}\right\rangle \rightarrow_{\beta \eta d}\left\langle M^{\prime}, \varnothing\right\rangle$, so $M^{\prime \prime} \rightarrow_{1} M^{\prime}$. Hence $M \rightarrow_{1}^{*} M^{\prime \prime} \rightarrow_{1} M^{\prime}$.

Proof(Lemma 8.10): Let $M \in \Lambda$ and let $c \in \mathcal{V}$ such that $c \notin \operatorname{fv}(M)$. Let $M \rightarrow_{\beta \eta}^{*} M_{1}$ and $M \rightarrow_{\beta \eta}^{*}$ $M_{2}$. Then by lemma 5, $M \rightarrow{ }_{1}^{*} M_{1}$ and $M \rightarrow{ }_{1}^{*} M_{2}$. We prove the statement by induction on $M \rightarrow{ }_{1}^{*} M_{1}$.

- Let $M=M_{1}$. Hence $M_{1} \rightarrow{ }_{1}^{*} M_{2}$ and $M_{2} \rightarrow{ }_{1}^{*} M_{2}$.
- Let $M \rightarrow_{1}^{*} M_{1}^{\prime} \rightarrow_{1} M_{1}$. By IH, $\exists M_{3}^{\prime}, M_{1}^{\prime} \rightarrow_{1}^{*} M_{3}^{\prime}$ and $M_{2} \rightarrow_{1}^{*} M_{3}^{\prime}$. We prove that $\exists M_{3}, M_{1} \rightarrow_{1}^{*}$ $M_{3}$ and $M_{3}^{\prime} \rightarrow_{1} M_{3}$, by induction on $M_{1}^{\prime} \rightarrow{ }_{1}^{*} M_{3}^{\prime}$.
- let $M_{1}^{\prime}=M_{3}^{\prime}$, hence $M_{3}^{\prime} \rightarrow_{1} M_{1}$ and $M_{1} \rightarrow{ }_{1}^{*} M_{1}$.
- Let $M_{1}^{\prime} \rightarrow_{1}^{*} M_{3}^{\prime \prime} \rightarrow_{1} M_{3}^{\prime}$. By IH, $\exists M_{3}^{\prime \prime \prime}, M_{1} \rightarrow_{1}^{*} M_{3}^{\prime \prime \prime}$ and $M_{3}^{\prime \prime} \rightarrow_{1} M_{3}^{\prime \prime \prime}$. By lemma 2.2.3, $c \notin \mathrm{fv}\left(M_{3}^{\prime \prime}\right)$. Since $M_{3}^{\prime \prime} \rightarrow_{1} M_{3}^{\prime}$ and $M_{3}^{\prime \prime} \rightarrow_{1} M_{3}^{\prime \prime \prime}$, By lemma 8.7, $\exists M_{3}, M_{3}^{\prime} \rightarrow_{1} M_{3}$ and $M_{3}^{\prime \prime \prime} \rightarrow_{1} M_{3}$.
